In Tamil Nadu, black gram was mainly cultivated in Cuddalore, Nagapattinam, Villupuram, Thanjavur, and Tiruvarur districts. Green gram was grown in Nagapattinam, Tiruvarur, Thiruvallur, Thoothukudi, and Salem districts. At present, the price of black gram was Rs. 54 a kg and green gram was ruling at Rs. 64 a kg at the Villupuram regulated market. Now, harvesting season has commenced for green gram and black gram, especially in the rice fallows areas. As per the analysis the price of black gram is expected to hover in the range of Rs. 57 to Rs. 59 a kg and green gram would be in the range between Rs. 64 and Rs. 65 a kg between March and May.  - **Normal 2015 Monsoon,While expected Rainfall in Next Week shall Lead to Further Damage in Rabi Crop.** According to ASSOCHAM-Skymet Weather joint study,India is likely to get normal monsoon rainfall at 102% of long-period average during June-September this year.However some pockets that might be deficient (by a narrow margin) include Himachal Pradesh, Punjab, Haryana, Uttarakhand, Marathwada, Rayalseema, South Interior Karnataka, North Tamil Nadu and parts of the North East.A devolving El Nino in Monsoon 2015 will most probably not impact it negatively as droughts seem to happen where there is an evolving El Nino episode," Thus forecast of normal monsoon this year seems well distributed uniformly throughout India. The Chance of a back to back drought is 3% (2014 was a mild meteorological drought). Besides there is still no clear signal about the emergence of an Indian Ocean Dipole (IOD) this year during monsoon. According to calculations (assuming an error margin of +/-4%) the following is Monsoon's risk spread over the four-month period:
 - ✓ 6% chance of excess (seasonal rainfall that is more than 110% of LPA)
 - ✓ 36% chance of above normal (seasonal rainfall that is between 105 to 110% of LPA)
 - ✓ 52% chance of normal (seasonal rainfall that is between 96 to 104% of LPA)
 - ✓ 4% chance of below normal (seasonal rainfall that is between 90 to 95% of LPA)
 - ✓ 2% chance of drought (seasonal rainfall that is below 90% of the LPA)
- Meanwhile, study also states that more wet weather was expected in April and the damage to the Rabi crop would continue. A major rainfall spell is expected in the first week of April in North India.
- In a respond to a PIL on increasing farmer suicides in the country, the Ministry of Agriculture has told the Supreme Court that though the country has become self sufficient in production of cereals, it is dependent on imports to bridge the gap between domestic production and demand of edible oil and pulses.
