With early start of rainfall and good sowing condition in main pulses growing belt, area coverage under Tur, Urad and Mung jumped in comparison to last year till date. Conditions are favorable for pulses sowing and over all area are bound to increase this year.
- The government of Rajasthan has revised the stock limit to wholesalers from 250 tonnes to 400 tonnes. Of the 400 tonnes, a wholesaler may hold up to 200 tonnes of chana and 200 tonnes of other pulses. An official said warehouses registered with the Warehousing Development and Regulatory Authority (WDRA) would also be covered in the norm.
- Area under Kharif pulses throughout the country stood 22.61 lakh hectares as on 03 July this year, around 132.61% higher when compared to the area sown during corresponding period last year which was 9.72 lakh hectares, according to Ministry of Agriculture.
- Government agency MMTC opened a tender to import 5000 tonnes of Tur; the offers must be of minimum 2500 tonnes and remain valid until 24th July and has to be shipped within 15 September at Mumbai or Chennai port. Tur can be imported from Myanmar, Mozambique and Malawi.
- Government had shown interest to buy 22629 tonnes of pulses from NAFED and import huge amount of pulses from producing countries to control prices in domestic retail market. Government has decided to float tenders to import chana from Australia, yellow peas from Canada and other pulses from Myanmar. These steps may increase International pulses market as stocks in exporting countries are limited and new arrivals are expected to come August onwards.
- Government of India decided to include pulses after wheat and rice in BGREI to increase domestic production and reduce dependency on imports. Bringing Green Revolution to Eastern India (BGREI) is a government aided scheme in which crops like paddy and wheat are cultivated, funded by government and are grown in states like West Bengal, Odisha, Bihar, Jharkhand, Chhattisgarh, eastern UP and Assam .
- Central Government has asked all state governments to submit details of their demand for pulses and details of this year crop and availability of pulses from last year's stock. The information will help central government to analyze the situation and decide the action plan to control the increasing prices of pulses. They can meet the demand by getting additional supply from surplus states or can import from other countries.

Australia's Chana & Pea Production Up in 2015-16: ABARES- According to the ABARES (Agricultural commodities: June 2015 report), the Australian chana production in 2015-16 is expected to surge 845000 tonne from 555000 forecasted for 2014-15 on higher planted area. The field pea production is expected at 257000 tonnes, down from 291000 tonnes forecasted for 2014-15 on lower planted area. Following table illustrates further:

^a Calculated as a residual: production plus imports less exports less any observed or assumed change in stocks and, for wheat only, less seed use.

Note: Production, use, trade and stock data are on a marketing year basis: October–September for wheat; November–October for canola, peas and lupins. Production may not equal the sum of apparent domestic use and exports in any one year because of reductions or increases in stocks. The export data refer to marketing year export periods, so are not comparable with financial year export figures published elsewhere.
