a Calculated as a residual: production plus imports less exports less any observed or assumed change in stocks and, for wheat only, less seed use.

Note: Production, use, trade and stock data are on a marketing year basis: October–September for wheat; November–October for canola, peas and lupins. Production may not equal the sum of apparent domestic use and exports in any one year because of reductions or increases in stocks. The export data refer to marketing year export periods, so are not comparable with financial year export figures published elsewhere.
