Pulses Sector-Highlights

Domestic:

[\(Back to Content\)](#)

- According to IBIS (provisional data), import of pulses in February was around 3.35 Lakh tonnes at major ports in India, around 41% lower than January which was around 5.71 Lakh tonnes. Urad and Tur were imported higher this month whereas Masoor, Chana, Urad, Moong and Yellow Pea were imported lower compared to last month.
- According to the Second Advance Estimate by Government, Indian Pulses production estimate has been revised down to 17.33 MMT from targeted estimate of 20.05 MMT. Last year (2014-15) final estimate is 17.15 MMT. Production estimate has been lowered due to lower area coverage against higher coverage expectation due to less rainfall.
- Department of Agriculture has revised Tur production estimate down to 2.55 MMT from targeted estimate of 3.67 MMT. Despite higher coverage area, tur production has been lowered due to lower yield expectation. Agriwatch Tur production estimate is around 2.49 MMT. Tur market is expected to stay steady to slightly firm due to lower arrivals in the mandis as farmers are holding their crop in expectation of higher price in the future. However if export quotes get weaker market might move down from current level.
- Lentil crop has started arriving in Madhya Pradesh region and in Bihar it is expected to arrive in mid march. Crop quality is good in Madhya Pradesh but yield is expected to be lower than average whereas in Bihar farmers are expecting higher yield this year than last year. Lentil market is expected to trade weak due to arrival pressure in the mandis. However if export quotes get firmer market might get some support.
- According to the Second Advance Estimate by Government, Chana production estimate has been revised down to 8.09 MMT from targeted estimate of 9.50 MMT. Chana production estimate has been lowered due to lower area coverage against higher coverage expectation. AW estimate is around 7.89 MMT, even lower by 0.20 thousand tonne from government current estimate. Chana market is expected to stay steady to weak due to arrival pressure in the mandis. However, if rains occur in chana growing belts it may slow down harvesting activities and it may support cash market.
- According to the latest report by Department of Agriculture, Urad production estimate has been revised slightly down to 1.74 MMT from targeted estimate of 1.81 MMT. As cash market is hovering at lower level, demand is expected to begin from the second half of this month. Millers and retailers would start buying based on their immediate needs. Stockiest are expected to be active after mid March when Burmese crop starts hitting the market. By then market sentiments would be clear. Supply-demand side is expected to be balanced in March.
- Pea crop start arriving at some mandis of Uttar Pradesh and good arrival is expected after mid March. Crop quality is below standard as size of the grain is small. As per farmers feedback yield is also lower than last year. Pea market is expected to trade weak due to arrival pressure in the mandis. However if export quotes get firmer market might get some support.
- The Wholesale price index for Pulses for the month of January, 2016 falls to 370.1 from 378.2 in previous month. The Pulses annual rate of inflation based on monthly WPI, stood at -2.1% for January 2016 as compared to -0.58% in the previous month.

- According to the latest report, Canadian Lentil production for 2015-16 increases by around 19% to 2.4 MMT. Last year it was 1.98 MMT. Due to higher production and good demand, exports are forecasted to reach 2.4 MMT from 2.1 MMT. Season ending stock is expected to decrease from 0.36 MMT to 0.10 MMT. Farmer's average bids are likely to increase from \$585 to \$880/910 per tonnes due to higher demand, less availability of good quality crop and weak Canadian dollar.
- According to the latest report, Canada Chickpea Production for 2015-16 decreases by around 31 percent to 0.90 MMT. Canada had produced 1.31 MMT last year. Despite lower production, exports are forecasted to reach 0.85 MMT this year from 0.80 MMT last year due to higher demand. - According to the latest report, Canada Pea Production for 2015-16 decreases by around 16 percent to 3.2 MMT. Canada had produced 3.8 MMT last year. Due to lower production, exports are forecasted to reach 2.95 MMT this year from 3.04 MMT last year. Farmers' bids are likely to increase from \$260 to \$305-335 per tonne due to good demand.
- According to the latest ABARES report, Australian Chickpea production forecast 2015-16 is 1013 kilo tonnes around 82% greater than 2014-15 estimates of 555 kilo tonnes. Australian chickpea harvesting starts from mid September and crops start hitting India market from October onwards.

The field pea production is expected at 288000 tonnes, down from 290000 tonnes forecasted for 2014-15 on lower planted area. Following table illustrates further:

Calculated as a residual: production plus imports less exports less any observed or assumed change in stocks and, for wheat only, less seed use.

Note: Production, use, trade and stock data are on a marketing year basis: October–September for wheat; November–October for canola, peas and lupins. Production may not equal the sum of apparent domestic use and exports in any one year because of reductions or increases in stocks. The export data refer to marketing year export periods, so are not comparable with financial year export figures published elsewhere.
