- US

Domestic Market Fundamentals:

- The biggest rabi pulses crop is chana and this year production is likely to cross 100 lakh MT** given the weather and crop condition so far. New arrival has started in various markets of south India, Maharashtra and M.P, and is expected to start in Rajasthan, Gujarat, U.P and Bihar from third week of March. As crop size is large, supply would be ample in coming weeks. Price might be seen under pressure despite procurement drive. Govt may buy around 2 to 2.5 MMT this year on MSP. Out of total procurement around 9.25 lakh MT would be procured in, MH, Guj, U.P, A.P. & Bihar while the rest would be procured in M.P. & Rajasthan. The new MY started with 18.22 lakh MT carry in. So, total supply would be around 12.22 MMT against likely demand of 9.8-9.9 MMT in 2020-21. So supply side would be ample throughout the year. In peak arrival season Bengal gram may trade at 3750 to 3850 in major markets. At this level, stake holders might be seen commencing buying.
- New season started with 2.84 lakh MT masur. With expected production of 13.5 lakh MT and 5.5 lakh MT**, the import total supply would be around 21.84 lakh MT against consumption of 19.2 lakh MT. So no major price fluctuation is expected unless import gets distorted. New crop of masur is almost ready to be harvested in major producing regions like Chhattisgarh and Uttar Pradesh and is attaining maturity in states like M.P., Bihar and West Bengal. Crop condition is very good and Agriwatch expects production at 13.5 lakh MT this year. New crop is likely to hit market in Chhattisgarh and U.P. from second week of March. However, cloudy weather and sporadic rains may disturb harvesting this week. Market participants say that new vessel is in way to India from Canada. As arrival pace would remain lower in the first week of March, slight recovery is expected before first fortnight of March. Masur in Kanpur market is being traded at Rs 4500-4600 and it may move to Rs 4700. Medium term outlook seems weak. Govt has old stock and it would prefer to sell before starting procurement new crop.
- Urad cash market traded lower and may decrease further by Rs 100-200 in coming weeks. New rabi crop in Andhra Pradesh is good.** Arrival from new crop is about to commence from other states too. AP is the main producing state of urad in rabi season. Higher arrival is expected from mid-March. Importers/millers are active in Myanmar and they have started striking new deals. Market sources say that availability of new urad in Myanmar is not enough to fulfill 2.5 lakh MT demand from India as has been allowed recently. Now importers can import till 30th April-2020. Despite increasing possibility of import from Myanmar and 1.83 lakh MT stock in central pool any spike is unlikely. Range bound movement is expected in urad cash market in March. Stockiest in domestic market too have started offloading old stock. So, once arrival flow from new crop and import flow increase, it may trade lower and move towards MSP of Rs 5700. It is trading at Rs 6000-6200 right now.
- Despite slight downward correction in cash moong market overall inner tone remains firm. New crop is still three months away** while fear of lower yield in rabi crop in some regions may remain supportive to cash moong market. Shortage of good quality moong in physical market may push moong price up again. In Vijaywara market new moong is being traded at Rs. 7100, down by Rs 400 from previous week. It may decrease to Rs 6900-7000, around MSP level. Import volume remains restricted. So, overall tone seems bullish in the medium term. Even stock with mills is decreasing and demand is expected from mid-March again. Moong may touch Rs 7900-8000 again. Nafed is selling moong near MSP. It may restrict any spike in the near term.
- Tur may recover further with increasing volume of procurement. Nafed and other agencies have procured 2.0 lakh MT so far** against target of 5.5 lakh MT this year. Arrival is expected to decline by end of March and it may support tur market again. However, any major recovery is unlikely as import may start by end of April. Import volume is expected to be around 6 lakh MT including G to G basis import. It will keep market well supplied and may be restrictive for any spike in the near future. In Gulberga market tur is being traded at Rs 5100 while in AP market it is being sold at Rs 5000-5050 per qtl. Demand is almost normal right now. If govt increases procurement quota above 5.5 lakh MT, tur may move up to Rs 5500-5600, otherwise it may continue to trade in the range of Rs 5000-5500.

- *Peas market traded weak despite negligible import and lower stock in domestic market. New arrival and bumper chana crop are restricting upward momentum. New arrival flow in domestic market would continue till mid-April. So any firm momentum is unlikely. Green peas would continue to trade firm as stock in pipe line is almost nil.*

International Market Update:

- **Global field peas market traded weak as concerns regarding demand from China and India** are increasing due to good rabi production prospects in India and spread of Corona virus in china. Export import from China is almost halted due to fear. India too would not be a buyer even in March-2020. Area of chickpeas is higher and production in India would cross 100 lakh MT this year if weather condition during rest of Feb and march remains favorable. Even lentils production prospects seems good this year in India. All these factors have pressurized global market. Overall, tone remains weak.
- **Global Lentils market continued to trade weak due to slowing down of seasonal demand.** Despite slower demand export movement during MY 2019-20 has been up by 11.4% to 8.1lakh MT. US exported around 1.27 lakh MT masur during the same period. As demand pace is lower right now, any improvement in price is unlikely.
- **Dry peas production in Canada is expected to increase by 1.34 % to 43 lakh MT in 2020-21.** Harvested area has been considered at 1720 thousand ha with likely yield at 2500 kg per ha. In 2019-20 production forecast was 42.43 lakh MT. Thus, total supply is expected to increase from 46.19 to 47.85 lakh MT in 2020-21. Despite higher production estimate, export figure has been decreased from 35 to 33 lakh MT in 2020-21. However domestic use would increase from 6.94 to 8.60 lakh MT. Carryout too would increase from 4.24 to 6.25 lakh MT this year. Stock to use ratio would increase from 10 to 15 % while, average price might be rule in the range of \$ 245-275 per MT as per Agriculture and agri food Canada. lentils production In Canada May Increase By 1.43% To 22 Lakh MT In 2020-21.
- **Lentils production in Canada is likely to increase by 1.43 % to 22 lakh MT in 2020-21 as per** the latest update by agriculture & agri food Canada. Here harvested area has been considered at 15 lakh ha., slightly higher than last year (14.89 lakh ha). Yield has been considered slightly up from 1460 to 1470 kg per ha. Production has been pegged at 22 lakh MT in 2020-21. It was 21.67 in 2019-20. Total supply would decrease slightly from 28.78 to 26 lakh MT in 2020 -21. Even domestic use would decrease from 4.28 to 3.25 lakh MT. Carryout would decline from 3.5 to 2.75 lakh MT. Percentage stock to use ratio would decline from 14 to 12 %. Average price might be rule in the range of 4.40 to 4.70 lakh MT in 2020-21
- **Chickpeas production in Canada in 2019-20 has been pegged at 2.52 lakh MT .It would decrease to 2 lakh MT** in 2020-21. Average price is expected to hover in the range of 455-485 per MT during 2020-21. Import too would decline from 53 to 50 thousand MT in 2020-21.
- **Area coverage under chickpeas in Australia in 2019-20 is expected to decline by 15% to 1.7 lakh ha.** Production has been pegged at 1.7 lakh MT this year, down by 11 % from last year. Decrease in area and production is mainly attributed to lower demand from India and weak price in global market. Slight increase in yield has been seen as mostly chickpeas are grown in central Queensland, where weather condition improved in comparison to last year.
- **As per latest update by Australia Bureau of Statistics Australia exported 76,395 metric tons (MT) lentils in Dec-2019.** It is up from 62,178 MT in Nov-2019. Total shipment in current MY reached at 138,573 MT, it is higher by 227 % from last season till Dec-2019. B, desh brought 31188 MT, India brought 17623 MT and Sri Lanka purchased 8,658 MT in Dec. Pace of Lentil import is likely to be up in Jan -2020 too, as shipment continues, despite new crop at hands in India
- **Monthly Outlook: -Pulses, except moong and tur, are likely to trade steady to slightly weak.**

Note: Agriwatch 3rd adv Estimate For 2020-21 for Urad, Moong & Tur & preliminary estimate for Chana and Masur for crop year 2019-20, to be marketed in 2020-21 .

Urad: Urad production is likely to decrease by 22 % from 24.58 to 19.17 lakh tonne in MY -2019-20. Import is expected to decrease by 0.75 lakh tonne to 2.25 lakh tonne despite quantitative restriction. Import took place illegally through various channels. Total supply would decrease slightly from 36.55 to 30.17 lakh tonne in 2019-20. Export would decrease from 0.3 to 0.2 lakh tonne due to disparity. Consumption would increase from 27.5 to 28 lakh tonne in 2019-20. So, carryout out would decrease from 8.75 to 1.97 lakh tonne. As carryout has declined drastically, supply side is expected to be tight this year. Lower crop size is reflecting on price. It is likely to rule at higher level in new year-2020.

Moong: Moong production is likely to decrease by 9.18 % from 20.26 to 18.40 lakh tonne in 2019-20. Import is expected to stay steady at 1.5 lakh MT in 2020 too. Total supply is expected to decrease from 29.02 to 25.42 lakh tonne in MY 2019-20. As there is no demand from overseas market due to disparity, export is likely to decrease from 1 to 0.75 lakh tonne in the new season. Consumption would decrease from 22.5 to 21.5 lakh tonne due to higher prevailing prices in domestic market. Total usage is expected to touch 22.25 lakh tonne. Despite decrease in consumption carry out would decline from 5.52 to 3.17 lakh tonne. So, any major decline in moong price is unlikely in 2020.

Tur: Tur production is likely to increase by 2.7 % from 36.21 to 37.19 lakh tonne, in the new season (2019-20). Import is expected to increase by 3.5 to 4.0 lakh tonne due to eased restriction on quantity and G 2 G basis import. Total supply would decrease slightly from 48.02 to 49.6 lakh tonne due to improved crop condition. Export may decline to 0.25 lakh tonne due to lower availability in domestic market. Consumption may increase from 40. to 42 lakh tonne in 2020. With export, total consumption has been pegged at 42.25 lakh tonne. Due to lower production and import, carry out would decrease from 7.87 to 6.81 lakh tonne in 2020. Market is expected to find balance and no major spike is expected at this point of time amid commencement of new arrival. Procurement drive may help market to move up.

Chana: Chana production is likely to increase from 95.17 to 101 lakh tonne for MY 2020-21(2nd adv estimate). Sowing is over and area has increased over 11% this year. As new year is likely to start with hefty carry in of 16.80 lakh tonne, starting from March, supply side seems to be at ease. Total availability would increase from last year from 115.5 lakh tonne to 122.22 lakh MT. Consumption would increase from 95.5 to 99.5 lakh MT. The reason behind higher consumption is lower peas import this year.

Masur: MY 2020-21 is likely to start with 2.84 lakh tonne carry out amid expected production estimate of 13.5 lakh MT. lakh tonne MT. Sowing area is almost similar as last year. Import is likely to decrease by 1 lakh MT as crop is expected to be higher this year as weather condition is normal for lentils. Higher production estimate would keep availability slightly higher level

at 21.84 lakh tonne. Export would increase slightly from 0.1 to 0.2 lakh tonne this year. Consumption has been pegged, at 19.2 tonne in the new season. If prices continue to move up, stock from central pool may be released.

Agri Commodity Indices –Dec -2019:

Pulses WPI: Pulses WPI increased by 5 points from 153.6 in Dec to 154.1 in Jan-2020

Chana (Chickpeas /Bengal Gram):

Fundamental Analysis and Outlook:

Market Recap:

With commencement of new arrivals in south Indian states, some parts of M.P. and bumper crop prospects cash chana markets trades weak. Even futures too remain unsupportive. Slight recovery was seen this week due to rains that have affected harvesting activities. Recent rains may delay maturity of chana crop by 10 days. Besides, procurement drive may lend some support to cash market. However, pressure of arrival is likely to build up by the end of March. Nafed too is selling old stock and supply glut seems on the card. It may drag down chana price to 3700-3800 in major producing region. So, stake holders should avoid bulk buying above 3900-4000. Higher supply side would continue to weigh on cash market fundamental in coming weeks. Even carryout is higher this year. Target for procurement in MP and Rajasthan has not been fixed as yet. Cash market is already ruling at Rs400-4100 against MSP of Rs4875. Overall tone in chana market seems weak in March. However, weather condition in March too would play a crucial role as price driver.

All India average price for Chana decreased by 6.10 percent from Rs 4392 in Jan to 4124 per qtl. in Feb,-2020. However, Australian Chana (imported) price increased by 10.28 percent from Rs 4311 to Rs 4755 per 100kg during the same period. Following graph illustrates the chana price movement in different markets:

Price Dynamics: Prices are likely to stay steady to slightly weak in March due to

- Bumper production prospects and favorable weather condition
- Availability of higher stock with Nafed and private hands
- Stockiest are active to release stock as new crop commences.
- Weak futures
- Sluggish demand from millers and retailers ahead of new crop.

Seasonality Index: hints weak movement for spot market in March-2020.

Chana Future Market Analysis:

Technical Commentary:

- Decreasing price & OI hint market to trade weak in coming weeks.
- RSI is moving down in neutral region, hints caution to bulls.
- Prices closed below 9 and 18 days EMAs

Strategy: Sell On Rise

Supports & Resistances			S1	S2	PCP	R1	R2
Chana	NCDEX	April	3750	3850	3954	4061	4227
Monthly Trade Call*			Call	Entry	T1	T2	SL
Chana	NCDEX	April	Sell Below	4000	3850	3800	4090

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

With changed status, from the free to restricted category and hefty levy imposed on peas, its import remains almost halted now. The commerce ministry issued a separate harmonized system (HS code) for all peas (including yellow, green dun and kaspa) and changed its status in the third week of Dec. It has affected importers badly. Now import deals are not taking place. The fixed quota of 1.5 lakh MT has already been completed. Govt is trying to increase consumption of chana as it is abundantly available in domestic market. Importers have requested govt to allow green peas import as prices of green peas have increased to Rs-12,200 per qtl from 11800 per qtl a week ago. Against the quota of 1.5 lakh MT over 5.78 lakh MT has been imported so far. Under prevailing condition govt.is unlikely to allow green peas import. New crop in local market started hitting mandis now. So price of yellow peas may move down from current level. With new arrival in domestic market supply side seems at ease.

There is no price availability of yellow /white peas in Mumbai market as import is restricted and stock is almost nil. In Kanpur market yellow peas is being traded at RS 5400-5450. It has decreased from Rs 5800 to Rs 5400 in last one month. However, green peas price has increased from 11500 to 11900 per qtl. It may stay steady in March-2020.

Market recap:

Area under pea in India is lower by 7.77% to 9.64 lakh ha till Jan end. Normal area under peas is 9.45 lakh ha. The year may end with 10 lakh ha. area coverage. However, yield is expected to be better due to good weather condition. So production would be slightly higher than last year. Prices of other pulses are ruling lower and it would continue to cap uptrend in peas market. Steady to firm tone may prevail in green peas market. Demand has shifted to others pulses. There is no demand of yellow peas for mixing in chana for besan. It would be price restricting factor in coming months.

Price Dynamics: Pea market is expected to trade steady to slightly weak in March due to:-

- Good crop condition and new arrival
- Lower demand at higher level
- No demand for besan as chana availability is higher in domestic market
- Cheaper availability of other pulses

Spread With Chana:

Spread between Chana and Peas, at Kanpur market remained in negative zone. However, gap has decreased from Rs 1125 to Rs 1000 in last one month, based on monthly average of the price. Spread is expected to remain in the negative zone in March too on relative movement in Chana prices. Overall outlook seems steady to weak this month.

Seasonality Index depicts that pea prices are likely to notice slight decrease in March-2020.

Market Outlook For March: Steady to slightly weak movement is expected.

Masoor (Lentil/Masoor):

With likely arrival from mid-March Stockiest have started releasing stock ahead of new crop. Crop condition is good and higher yield is expected. Right now lentil in Kanpur market is being traded at Rs 4600 and may decrease to Rs4500-4550 before new crop starts. Old and imported stock is available in the market while Nafed and other states agencies too have stock around 30,000MT. These agencies too would prefer to offload it in March. Area is down by 4.58 % to 16.08 lakh ha. However, higher yield will compensate area loss to a great extent this year. Weak tone may prevail until govt. starts procurement at Rs 4800 per qtl. from end March.

Price Trend In Cash Market:

Price Dynamics:

In Feb-2020s, average price in key market Kanpur was down by 3 % from Rs 5158 to Rs 4825 per qtl. MoM basis. Prices are likely to trade steady to slightly weak in March-2020 .

Weak movement is expected due to:

- Selling by stockiest ahead of new crop
- Availability of stock with Nafed/Selling in open market
- Imported stock
- Weak demand from retail market ahead of new crop
- Good crop condition and better yield prospects

Seasonality Index depicts steady to slightly weak movement in March-2020.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Arrival of new tur in Maharashtra commences, while it is increasing in South Indian states, Karnataka, MP and Gujarat. This year It was delayed by 20-25 days this year. Normally, it arrives in end of December/Jan. Rains during end Dec and first fortnight in Jan have delayed crop harvesting. Some quality loss is feared in Karnataka too due to rains. Moisture content in the crop is still higher up to 11-12 % right now. It should be 10 to 11% in normal condition. Market experts say that arrival from Gulberga would not last long this year. Procurement on MSP has already crossed one lakh MT. With increasing procurement volume, market is expected to improve in coming weeks. Investors are active. Stake holders can stock it for two months and may sell it at good profit, once procurement drive comes to an end. May onward pressure from import might be seen. It may restrict uptrend in the market. Crop condition is good in Myanmar. Tur in Gulberga market is being traded at Rs 5100-5150 per qtl. Ongoing procurement drive may lend some support to tur cash market in march-April.

Market Recap:

Tur procurement target has been fixed at 545573MT. As a nodal agencies Nafed and FCI would procure tur this year, supported by some state agencies too. FCI would procure tur in Karnataka when arrival would start picking up. Procurement target has been decreased this year due to lower kharif crop size, so that supply in open market continues. Crop size may cross 37lakh MT with prevailing good weather condition. Cash market is expected to trade in the range of Rs 5000-5500 during March-2020. Procurement has crossed 2 lakh MT so far.

Price Dynamics:

In Feb-2020, average price in Gulberga market was up by 1.10% from 4950 to Rs 5050-5100 per qtl. due to procurement drive and fresh demand from mills amid lower pace of import. Tur price in March is likely to improve due to

- Commencement of procurement
- Slower import through G2G basis
- Import by private trade may be delayed by one month
- Likely higher demand from retailers/mills and
- Below normal crop(average of 3 years is 40 lakh MT)

Seasonality Index-depicts steady to slightly firm movement.

Market Outlook for March:

Fundamental remains supportive for Tur cash market in the near term.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Prices declined with commencement of sale by Nafed and increasing possibility of import by mills after March-2020. Time line for 2.5 lakh MT import has been extended to 30th April-2020. Nafed has enough old stock while rabi crop too started hitting the market. License has already been given to importers as DGFT has given additional import quota of 2.5 lakh MT for urad over and above 1.5 lakh MT.. Market sources say that old crop available in Myanmar is around 1 lakh MT while new crop would be available from end March. Right now urad lying at. Even in local market new urad would be available from mid – March. So any spike is unlikely. For fulfilling the shortage gap, Nafed may continue to release stock to control price. In local market urad trade in the range of Rs 5700-6000. Demand from mills is weak at higher level. Urad in Mumbai market traded at Rs 6100-6300 and may decrease to Rs 5700-5800. In Chennai market it is being offered at Rs 6000-6200 and SQ at Rs 6500-6600 per qtl. Overall trend remains weak.

Seasonality Index depicts range steady to slightly weak tone in the near to medium term.

Price Dynamics:

In Feb, average prices in key markets including Mumbai/was down by 5.34 % percent from 7190 to 6450 per qtl. In Chennai it was down by 7% to 6600. Prices may stay steady to slightly weak in March due to

- Higher import quota and likely new arrival from Rabi crop(winter crop)
- Selling of old stock from central pool
- Weak demand at higher level
- Good crop condition so far and
- Cheaper availability of other pulses.

Market Outlook for March : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Moong cash market traded steady to slightly firm amid steady inner tone. Despite shortage of quality moong demand at higher level got affected and stockiest are preferring to release stock slowly at higher level. In Jaipur market moong is being traded at Rs 7700-7750 and may decrease by Rs 200 in coming weeks, if prices continues to move up and govt .may interfere in the market. New crop from rabi season is not expected before mid-March. This week some downward pressure might be seen on cash moong market. Nafed and other agencies have procured 139908.41MT moong so far. Procurement is over in all states except Karnataka and Rajasthan. Old stock is around 92916.54 MT. This means total availability with Nafed and other agencies is 232,884.95 MT now. Govt may use this stock to cool down prices in domestic market. No decision has been taken over increasing import quota so far.

Price Dynamics:

Moong arrivals have started decreasing and there is a shortage of quality crop. It would push prices up in cash market amid procurement drive. Average price decreased by 2 % to 7575 in Jaipur market in Feb. Nafed still has 1.65 lakh MT stock to release and auction started in many states with procurement drive. Right now demand is weak.

Price Trend:

Market is expected to trade firm in March due to:

- Lower arrival in markets
- Shortage of quality crop
- Decreasing stock in central pool
- Increasing disparity for import
- Shortage of moong in global market and
- Rabi crop expected March onward

Seasonality Index depicts firm movement in the near term.

Market Outlook for March: Steady to slightly firm movement is expected after slight correction.

Pulses Wise Technical Outlook for March -2020: -

Chana:

Outlook –We expect prices to notice steady to slightly weak movement in March-2020. Market may trade down due to:

- Higher area coverage & good production prospects
- Weak demand
- Likely bulk sale by Nafed
- Normal demand for besan
- Selling by private trades and weak futures
- Expected price band for Chana in Delhi is 3750 to 3950 levels in this month.

Trade Strategy: Sell on rise

Trade Recommendations: Go short around 4150 with the first target of 3950 and second target 3850 with stop loss at 4250 level.

Support & Resistance				
S2	S1	PCP	R1	R2
