 - US

**Domestic Market Fundamentals:**

- **Farmers have harvested 70 to 80 % Chana crop throughout India and the rest is likely to be harvested in next 10 days lockdown.** Farmers have stored crops at their farmlands/home as markets are not open for procurement right now. Private trades are not trading in markets. Some trades are buying outside markets in village. As lock down is likely to continue till April, supply side may be disrupted if govt. is unable to ensure good supply to millers in coming days/weeks. Prices in markets have started moving up. It is high time to start procurement drive in big ways. As govt. would distribute 6.88 lakh MT pulses in next three months free of cost, demand for dal would remain subdued till June. Besides, availability of mango too would affect demand. Chana in Delhi may trade at Rs 4400 to 4650 in April.
- **Govt. has green signaled for commencing procurement of chana & masur in 13 states.** It has allocated Rs 1250 crore to start buying with immediate effects. Now approval from center, for procurement, is not essential and up to 25% pulses can be procured out of total production in the states. Pulses procurement drive would be executed through various states schemes including PM Asha Yojna too. The allocated amount would be used in Assam, Bihar, Chhattisgarh, Himachal Pradesh, Jharkhand, Kerala, Odisha, Punjab, Rajasthan, Tamil Nadu, Uttarakhand and W. Bengal. Major states like MH, UP And MP are not included in it. Total 2.58 lakh MT would be procured in 13 states.
- **Almost 75 to 80 % harvesting of masur crop is over now in MP and Uttar Pradesh. Lockdown is not allowing new arrival into markets.** There is no stock in pipeline and millers have increased buying in smaller quantity wherever it is available. It has lent support to cash masur market. Sensing extension of lockdown period, mills have increased buying in producing region at village level. It is high time to ensure higher supply for mills right now. Arrivals of masur from Mungawali, Ganjvasoda, Sagar and Bhopal line are 40-45% lower than last year while competitive buying has increased now. Masur price in has increased from 5400 to 5525/5550, while Canadian masur is being offered at Rs 5500/5525. As there is no bulk arrival from domestic market/import, masur price may move up by Rs 300/400 more from current level. Yield of chhoti masur in Bihar and UP is 10 % lower while arrival from Mungawali and Kota line too is lower, masur would trade firm in coming weeks.
- **Lockdown has disrupted supply of urad in markets and for the mills.** Dall millers are buying urad continuously at lower price. It has lent support to cash urad market. FAQ and SQ are being traded at Rs 6800-6900 and 7300-7400 per qtl respectively. There is no crop of urad in near future. Lockdown is likely to continue. So goods movement would remain struck at every level. Labour problem at ports is obvious and loading/unloading at port from vessels is not taking place. It is disrupting supply chain in the market right now. Urad exporters in Myanmar are unwilling to sell urad at lower price. Urad stock in Myanmar is not more than 3.5 lakh MT (old and new combined). Actually, 4 lakh MT import quota approved by India for 2020-21 has given Myanmar's exporters a chance to hold stock for longer period and receive higher price. Two small vessels are being loaded in Myanmar (25 Thousand MT each) and are expected to hit Indian ports in the fourth week of April. It would come India via Singapore (Malaysia).
- **Cash tur market traded up on supply disruption due to lockdown till 14th of April.** Goods movement remains disturbed due to shortage of laborers and transportation. It has pushed dal price up in the market. Even stock in the mills is decreasing. Prices may move further up if supply chain is not set on right track this week. Tur in Gulberga market was being traded at Rs 5350-5450 and may move further up, due to sudden increase in demand. Even procurement pace has slowed down and is unlikely to return to normal track before mid-April.
- **Mostly cash markets remained closed due to increasing fear of Covid-19.** It would remain closed till 14th April 2020. Lower arrival, restricted trading activities helped market to recover this week despite restricted trade in some markets in the first week of April, as bulk trading activities remain halted and sudden spurt in demand due to lockdown helped market to recover this week by Rs 300 to Rs 400.. No moong crop is due in next two months amid negligible import volume. So, cash market is likely to trade range steady to slightly firm in April. . In

Vijayawada market new moong is being traded at Rs 7300-7400, up by Rs 400-200 from previous week. It may move further up as supply side is tight while pipeline is almost vacant. New crop is expected not before August. Import remains limited due to restricted quota.

- Peas market traded weak despite negligible import and lower stock in domestic market. New arrival and bumper chana crop are restricting upward momentum. New arrival flow in domestic market would continue till mid-April. So any firm momentum is unlikely. Green peas would continue to trade firm as stock in pipe line is almost nil.

International Market Update:

- **Dry peas production in Canada is expected to increase by 1.34 % to 43 lakh MT in 2020-21.** Harvested area has been considered at 1720 thousand ha with likely yield at 2500 kg per ha. In 2019-20 production forecast was 42.43 lakh MT. Thus, total supply is expected to increase from 46.19 to 47.85 lakh MT in 2020-21. Despite higher production estimate, export figure has been decreased from 35 to 33 lakh MT in 2020-21. However domestic use would increase from 6.94 to 8.60 lakh MT. Carryout too would increase from 4.24 to 6.25 lakh MT this year. Stock to use ratio would increase from 10 to 15 %, while average price might rule in the range of \$ 245-275 per MT as per Agriculture and agri food Canada.
- **Dry peas area in Canada is likely to be same in Canada as was seen in 2019-20. It may be 1.75 million ha. in 2020-21.** Possibility of good returns and better export demand is the reason for the same. Dry peas production may touch at 43 lakh MT. Supply is expected to rise marginally due to higher carry-in stocks. Exports are expected to be lower than the current crop year and carry-out stocks are expected to rise. The average price in 2020-21 is expected to be unchanged (\$245-275) from the previous year.
- **Lentils production in Canada is likely to increase by 1.43 % to 22 lakh MT in 2020-21 as per the latest update by agriculture & agri food Canada.** Here harvested area has been considered at 15 lakh ha., slightly higher than last year (14.89 lakh ha). Yield has been considered slightly up from 1460 to 1470 kg per ha. Production has been pegged at 22 lakh MT in 2020-21. It was 21.67 in 2019-20. Total supply would decrease slightly from 28.78 to 26 lakh MT in 2020-21. Even domestic use would decrease from 4.28 to 3.25 lakh MT. Carryout would decline from 3.5 to 2.75 lakh MT. Percentage stock to use ratio would decline from 14 to 12 %. Average price might be rule in the range of 4.40 to 4.70 lakh MT in 2020-21.
- **Chickpeas production in Canada is likely to decrease from 2.52 lakh MT to 2.0 lakh MT in 2020-21.** Area is expected to decrease from 156 to 117 thousand ha. Export may increase slightly from 1.3t 1.35 lakh MT in 2020-21. Prices may be in the range of \$465-485 per MT.
- **As per the latest Australian Bureau of Statistics Chickpeas export volume from Australia increased in Jan-2020 in comparison to Dec-2019.** In January -2020, Australia exported 56,502 MT, up 2% from 55,296 the previous month. Bangladesh purchased 36,801 MT. Pakistan was the second most important importer taking 13,073 MT, followed by United Arab Emirates at 3,939 MT.
- **Chickpeas production in Canada in 2019-20 has been pegged at 2.52 lakh MT .It would decrease to 2 lakh MT in 2020-21.** Average price is expected to hover in the range of 455-485 per MT during 2020-21. Import too would decline from 53 to 50 thousand MT in 2020-21.
- **Area coverage under chickpeas in Australia in 2019-20 is expected to decline by 15% to 1.7 lakh ha.** Production has been pegged at 1.7 lakh MT this year, down by 11 % from last year. Decrease in area and production is mainly attributed to lower demand from India and weak price in global market. Slight increase in yield has been seen as mostly chickpeas are grown in central Queensland, where weather condition improved in comparison to last year.

Weekly Outlook: -Pulses are likely to trade steady to slightly weak.

Note: Agriwatch 3rd adv Estimate For 2020-21 for Urad, Moong & Tur & preliminary estimate for Chana and Masur for crop year 2019-20, to be marketed in 2020-21 .

Urad: Urad production is likely to decrease by 21 % from 24.58 to 19.39 lakh tonne in MY -2019-20. Import is expected to increase by 0.5 lakh tonne to 3.5 lakh tonne due to higher import quota. . Total supply would decrease slightly from 36.55 to 31.64 lakh tonne in 2019-20. Export would decrease from 0.3 to 0.2 lakh tonne due to disparity. Consumption would increase from 27.8 to 28.2 lakh tonne in 2019-20. So, carryout out would decrease from 8.75 to 3.44 lakh tonne. As carryout has declined drastically, supply side is expected to be tight this year. Lower crop size is reflecting on price. It is likely to rule at higher level in-2020.

Moong: Moong production is likely to decrease by 10 % from 20.26 to 19.06 lakh tonne in 2019-20. Import is expected to stay steady at 1.5 lakh MT in 2020 too. Total supply is expected to decrease from 29.02 to 26.08 lakh tonne in MY 2019-20. As there is no demand from overseas market due to disparity, export is likely to decrease from 1 to 0.75 lakh tonne in the new season. Consumption would increase from 22.5 to 23 lakh tonne due to improved demand in domestic market. Total usage is expected to touch 23.75 lakh tonne. Carry out would decline from 5.52 to 2.33 lakh tonne. So, any major decline in moong price is unlikely in 2020.

Tur: Tur production is likely to increase by 2.7 % from 36.21 to 37.19 lakh tonne, in the new season (2019-20). Import is expected to increase by 3.5 to 4.0 lakh tonne due to eased restriction on quantity and G 2 G basis import. Total supply would decrease slightly from 48.02 to 49.6 lakh tonne due to improved crop condition. Export may decline to 0.25 lakh tonne due to lower availability in domestic market. Consumption may increase from 40. to 42 lakh tonne in 2020. With export, total consumption has been pegged at 42.25 lakh tonne. Due to lower production and import, carry out would decrease from 7.87 to 6.81 lakh tonne in 2020. Market is expected to find balance and no major spike is expected at this point of time amid commencement of new arrival. Procurement drive may help market to move up.

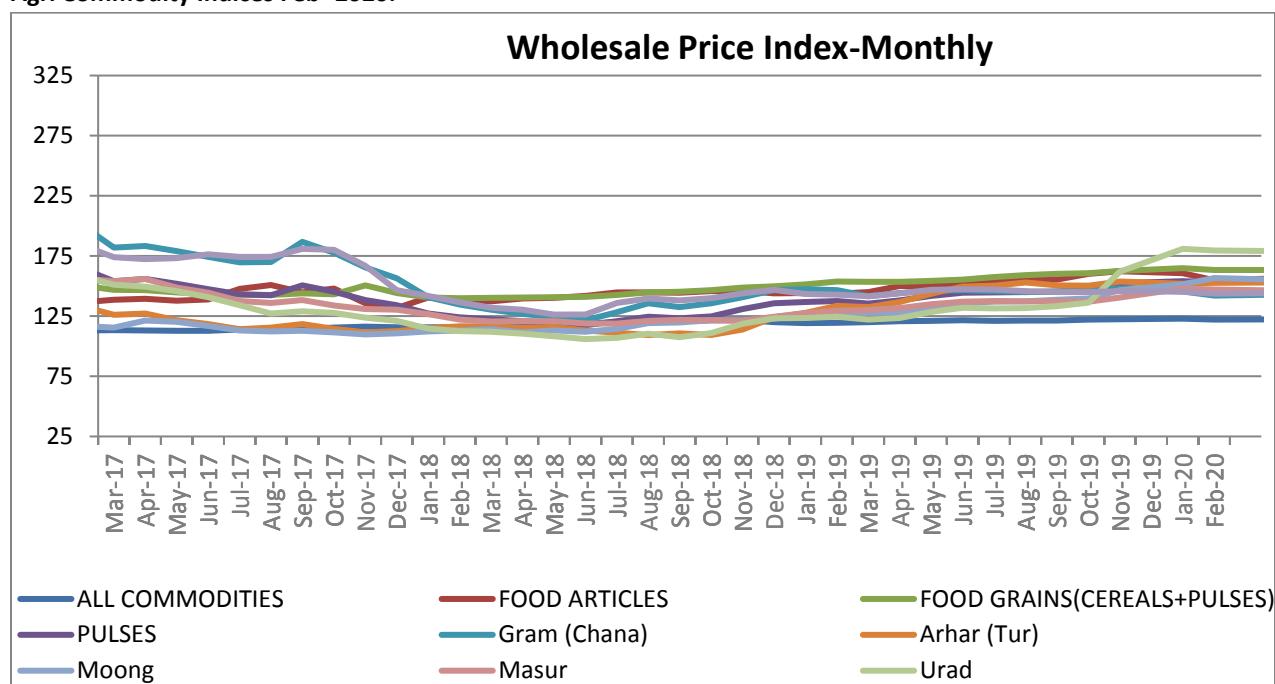

Chana: Chana production is likely to increase from 95.17 to 106.5 lakh tonne for MY 2020-21(2nd adv estimate). Sowing is over and area has increased over 11% this year. As new year is likely to start with hefty carry in of 18.22 lakh tonne, starting from March, supply side seems to be at ease. Total availability would increase from last year from 115.5 lakh tonne to 127.23lakhMT. Consumption would increase from 95.5 to 99.5lakh MT. The reason behind higher consumption is lower peas import this year.

Masur: MY 2020-21 is likely to start with 2.84 lakh tonne carry out amid expected production estimate of 13.5lakh MT. lakh tonne MT. Sowing area is almost similar as last year. Import is likely to decrease by 1lakh MT as crop is expected to be higher this year as weather condition is normal for lentils. Higher production estimate would keep availability slightly higher level

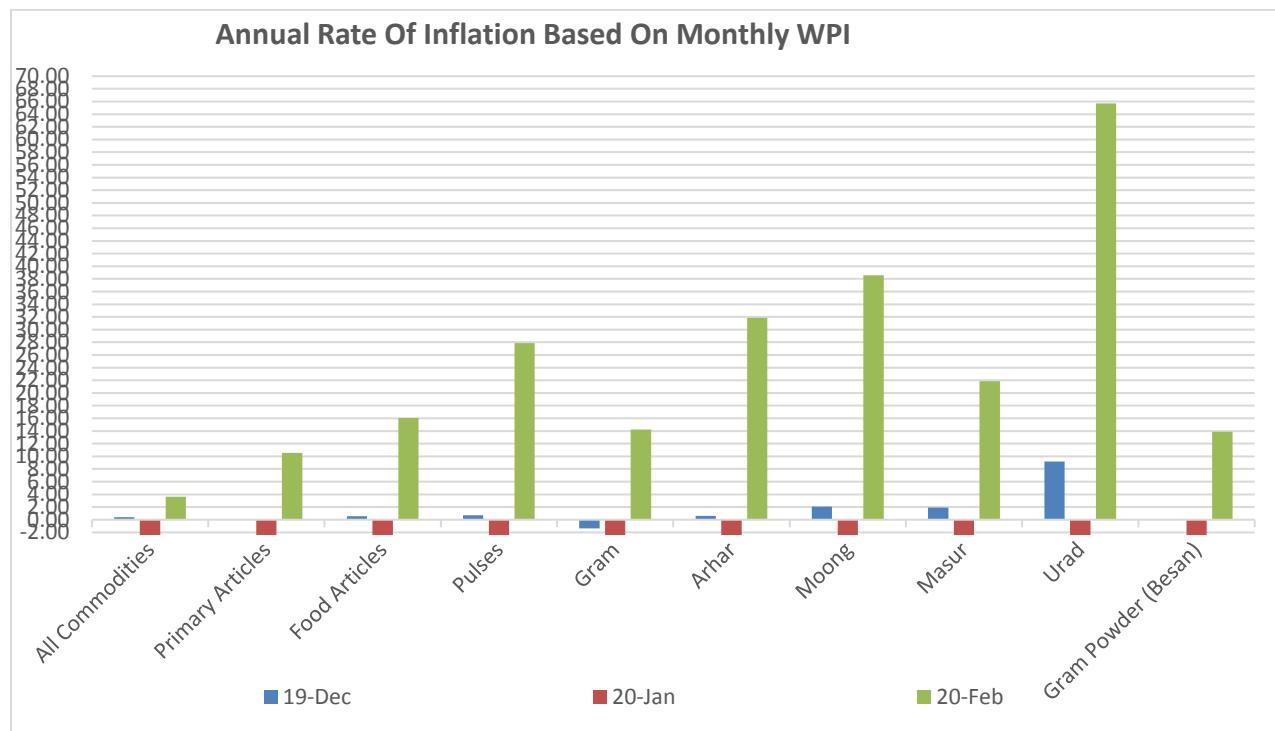

at 21.84 lakh tonne. Export would increase slightly from 0.1 to 0.2 lakh tonne this year. Consumption has been pegged, at 19.2 tonne in the new season. If prices continue to move up, stock from central pool may be released.

Agri Commodity Indices Feb -2020:

Pulses WPI: Pulses WPI decreased by 9points from 154.1 in Dec to 153.2 in Feb-2020

Chana (Chickpeas /Bengal Gram):**Fundamental Analysis and Outlook:****Market Recap:**

With commencement of new arrivals in south Indian states, some parts of M.P. and bumper crop prospects cash chana markets trades weak. Even futures too remain unsupportive. Slight recovery was seen this week due to rains that have affected harvesting activities. Recent rains may delay maturity of chana crop by 10 days. Besides, procurement dive may lend some support to cash market. However, pressure of arrival is likely to build up by the end of March. Nafed too is selling old stock and supply glut seems on the card. It may drag down chana price to 3700-3800 in major producing region. So, stake holders should avoid bulk buying above 3900-4000. Higher supply side would continue to weigh on cash market fundamental in coming weeks. Even carryout is higher this year. Target for procurement in MP and Rajasthan has not been fixed as yet. Cash market is already ruling at Rs400-4100 against MSP of Rs4875. Overall tone in chana market seems weak in March. However, weather condition in March too would play a crucial role as price driver.

All India average price for Chana decreased by 6.10 percent from Rs 4392 in Jan to 4124 per qtl. in Feb,-2020. However, Australian Chana (imported) price increased by 10.28 percent from Rs 4311 to Rs 4755 per 100kg during the same period. Following graph illustrates the chana price movement in different markets:

Price Dynamics: Prices are likely to stay steady to slightly weak in March due to

- Bumper production prospects and favorable weather condition
- Availability of higher stock with Nafed and private hands
- Stockiest are active to release stock as new crop commences.
- Weak futures
- Sluggish demand from millers and retailers ahead of new crop.

Seasonality Index: hints weak movement for spot market in March-2020.

Chana Future Market Analysis:

Technical Commentary:

- *Increasing price & OI hint market to trade firm in coming weeks.*
 - *RSI is moving up in neutral region, hints caution to bears.*
 - *Prices closed below 9 and 18 days EMAs*

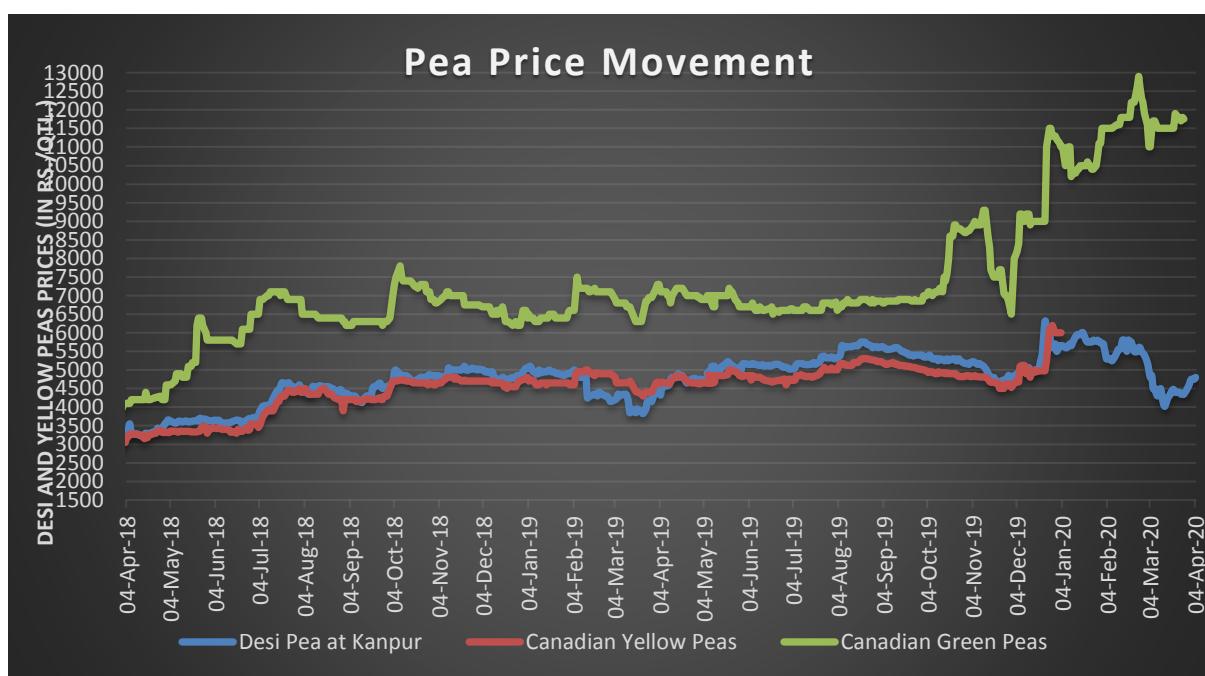

Strategy: Buy On Dip

Supports & Resistances			S1	S2	PCP	R1	R2

Monthly Trade Call*			Call	Entry	T1	T2	SL
Chana	NCDEX	May	Sell Below	4000	4150	4245	3950

**Field Pea (Matar/Dry Pea):****Fundamental Analysis and Outlook:**

With changed status, from the free to restricted category and hefty levy imposed on peas, its import remains almost halted now. The commerce ministry issued a separate harmonized system (HS code) for all peas (including yellow, green dun and kasper) and changed its status in the third week of Dec. It has affected importers badly. Now import deals are not taking place. The fixed quota of 1.5 lakh MT has already been completed. Govt is trying to increase consumption of chana as it is abundantly available in domestic market. Importers have requested govt to allow green peas import as prices of green peas have increased to Rs-12,200 per qtl from 11800 per qtl a week ago. Against the quota of 1.5 lakh MT over 5.78 lakh MT has been imported so far. Under prevailing condition govt is unlikely to allow green peas import. New crop in local market started hitting mandis now. So price of yellow peas may move down from current level. With new arrival in domestic market supply side seems at ease.

There is no price availability of yellow /white peas in Mumbai market as import is restricted and stock is almost nil. In Kanpur market yellow peas is being traded at RS 5400-5450. It has decreased from Rs 5800 to Rs 5400 in last one month. However, green peas price has increased from 11500 to 11900 per qtl. It may stay steady in March-2020.

**Market recap:**

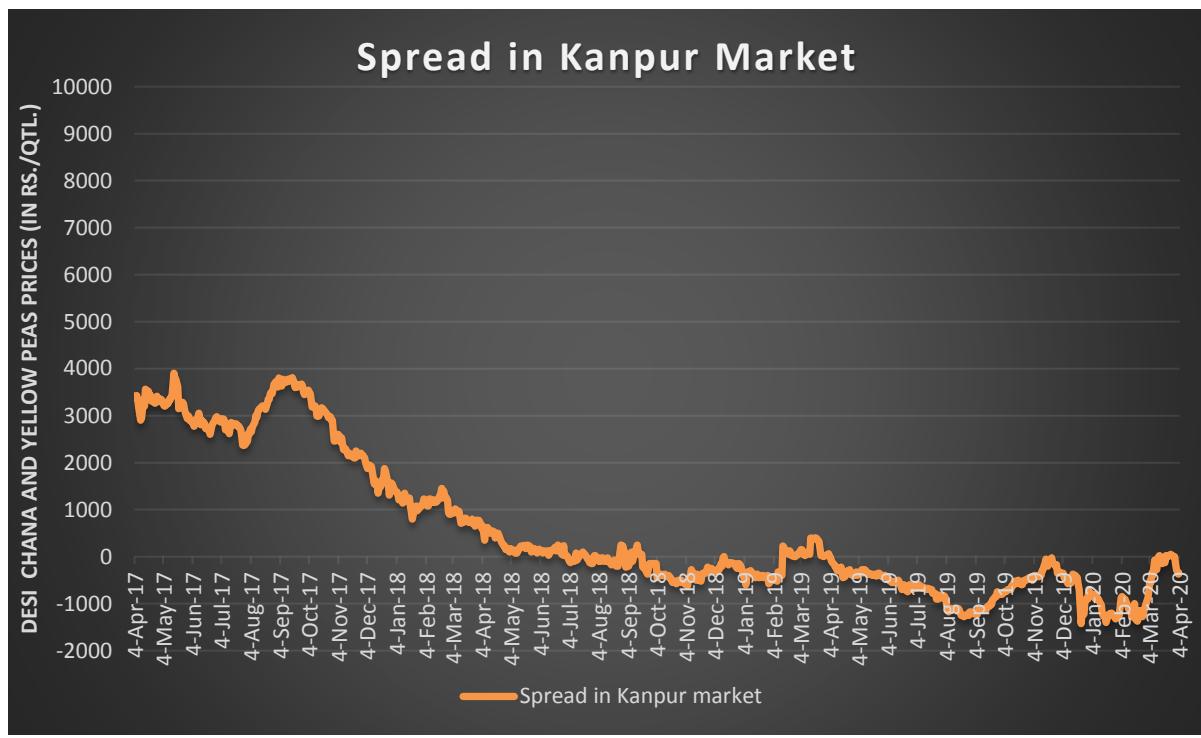

Area under pea in India is lower by 7.77% to 9.64 lakh ha till Jan end. Normal area under peas is 9.45 lakh ha. The year may end with 10 lakh ha. area coverage. However, yield is expected to be better due to good weather condition. So production would be slightly higher than last year. Prices of other pulses are ruling lower and it would continue to cap uptrend in peas market. Steady to firm tone may prevail in green peas market. Demand has shifted to others pulses. There is no demand of yellow peas for mixing in chana for besan. It would be price restricting factor in coming months.

Price Dynamics: Pea market is expected to trade steady to slightly weak in March due to:-

- Good crop condition and new arrival
- Lower demand at higher level
- No demand for besan as chana availability is higher in domestic market

- Cheaper availability of other pulses

Spread With Chana:

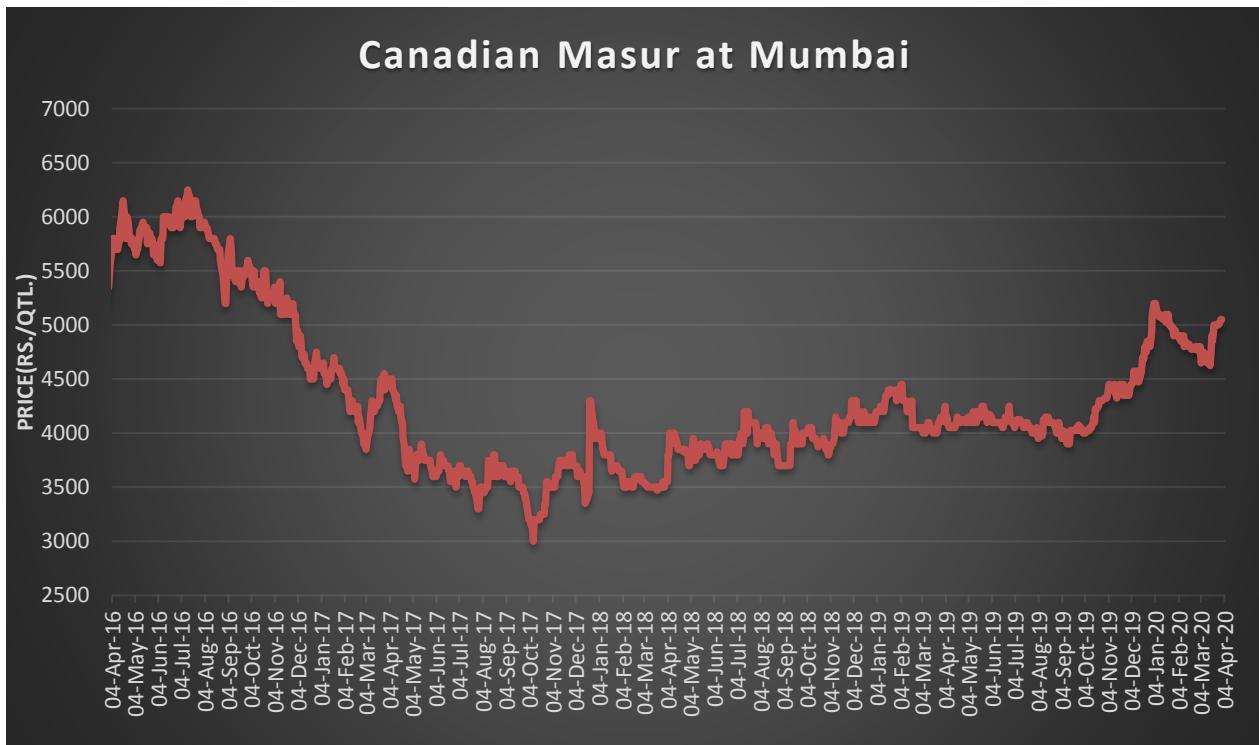

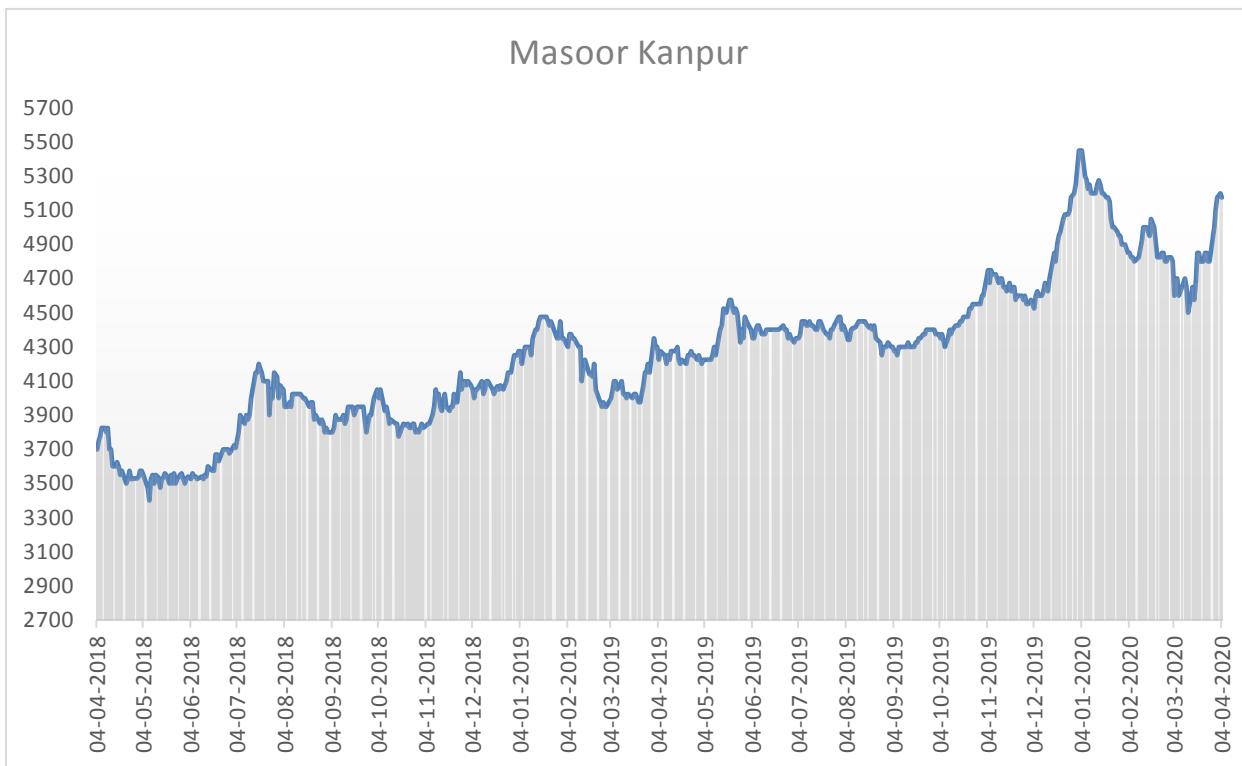

Spread between Chana and Peas, at Kanpur market remained in negative zone. However, gap has decreased from Rs 1125 to Rs 1000 in last one month, based on monthly average of the price. Spread is expected to remain in the negative zone in March too on relative movement in Chana prices. Overall outlook seems steady to weak this month.

Seasonality Index depicts that pea prices are likely to notice slight decrease in March-2020.

Market Outlook For March: Steady to slightly weak movement is expected.

Masoor (Lentil/Masoor):

With likely arrival from mid-March Stockiest have started releasing stock ahead of new crop. Crop condition is good and higher yield is expected. Right now lentil in Kanpur market is being traded at Rs 4600 and may decrease to Rs4500-4550 before new crop starts. Old and imported stock is available in the market while Nafed and other states agencies too have stock around 30,000MT. These agencies too would prefer to offload it in March. Area is down by 4.58 % to 16.08 lakh ha. However, higher yield will compensate area loss to a great extent this year. Weak tone may prevail until govt. starts procurement at Rs 4800 per qtl. from end March.

**Price Trend In Cash Market:**

**Price Dynamics:**

In Feb-2020s, average price in key market Kanpur was down by 3 % from Rs 5158 to Rs 4825 per qtl. MoM basis. Prices are likely to trade steady to slightly weak in March-2020 .

Weak movement is expected due to:

- Selling by stockiest ahead of new crop
- Availability of stock with Nafed/Selling in open market
- Imported stock
- Weak demand from retail market ahead of new crop
- Good crop condition and better yield prospects

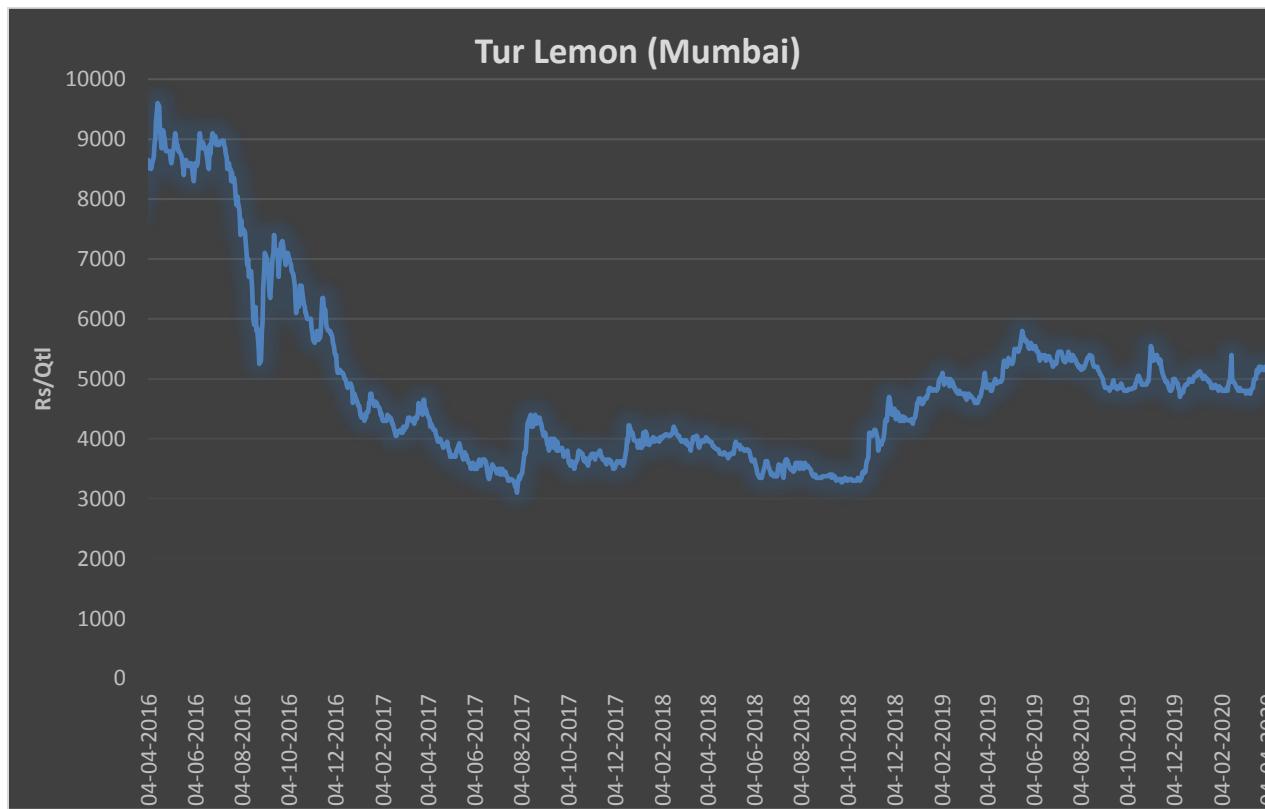

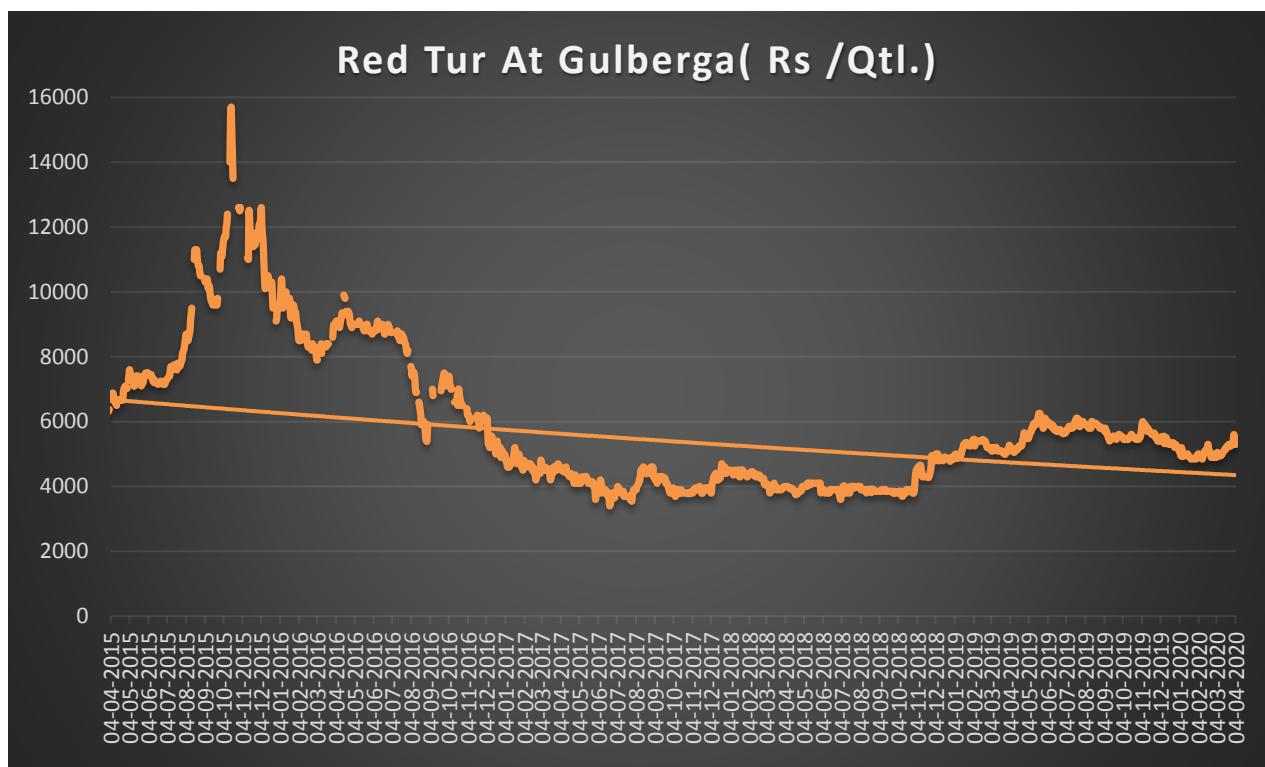

Seasonality Index depicts steady to slightly weak movement in March-2020.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):**Fundamental Analysis and Outlook:**

Arrival of new tur in Maharashtra commences, while it is increasing in South Indian states, Karnataka, MP and Gujarat. This year It was delayed by 20-25 days this year. Normally, it arrives in end of December/Jan. Rains during end Dec and first fortnight in Jan have delayed crop harvesting. Some quality loss is feared in Karnataka too due to rains. Moisture content in the crop is still higher up to 11-12 % right now. It should be 10 to 11% in normal condition. Market experts say that arrival from Gulberga would not last long this year. Procurement on MSP has already crossed one lakh MT. With increasing procurement volume, market is expected to improve in coming weeks. Investors are active. Stake holders can stock it for two months and may sell it at good profit, once procurement drive comes to an end. May onward pressure from import might be seen. It may restrict uptrend in the market. Crop condition is good in Myanmar. Tur in Gulberga market is being traded at Rs 5100-5150per qtl. Ongoing procurement drive may lend some support to tur cash market in march-April.

Market Recap:

Tur procurement target has been fixed at 545573MT. As a nodal agencies Nafed and FCI would procure tur this year, supported by some state agencies too. FCI would procure tur in Karnataka when arrival would start picking up. Procurement target has been decreased this year due to lower kharif crop size, so that supply in open market continues. Crop size may cross 37lakh MT with prevailing good weather condition. Cash market is expected to trade in the range of Rs 5000-5500 during March-2020. Procurement has crossed 2 lakh MT so far.

Price Dynamics:

In Feb-2020, average price in Gulberga market was up by 1.10% from 4950 to Rs 5050-5100 per qtl. due to procurement drive and fresh demand from mills amid lower pace of import. Tur price in March is likely to improve due to

- Commencement of procurement
- Slower import through G2G basis
- Import by private trade may be delayed by one month
- Likely higher demand from retailers/mills and
- Below normal crop(average of 3 years is 40 lakh MT)

Seasonality Index-depicts steady to slightly firm movement.

Market Outlook for March:

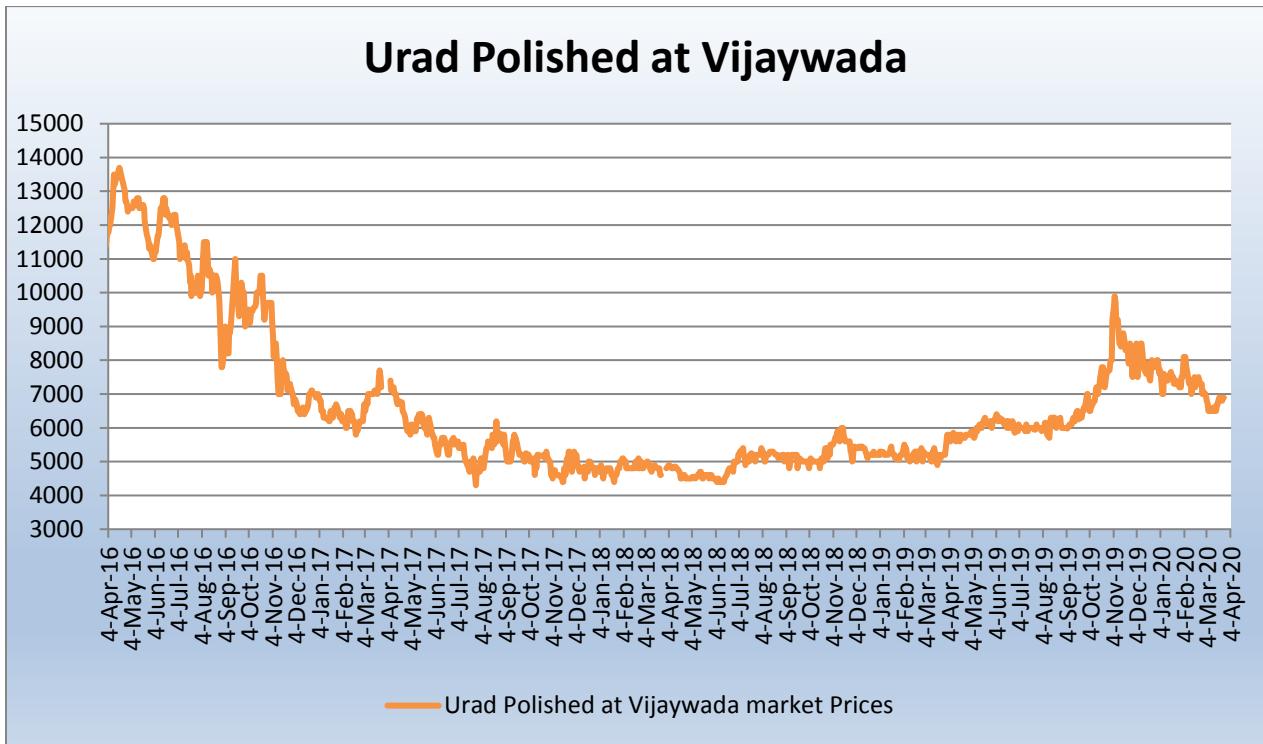

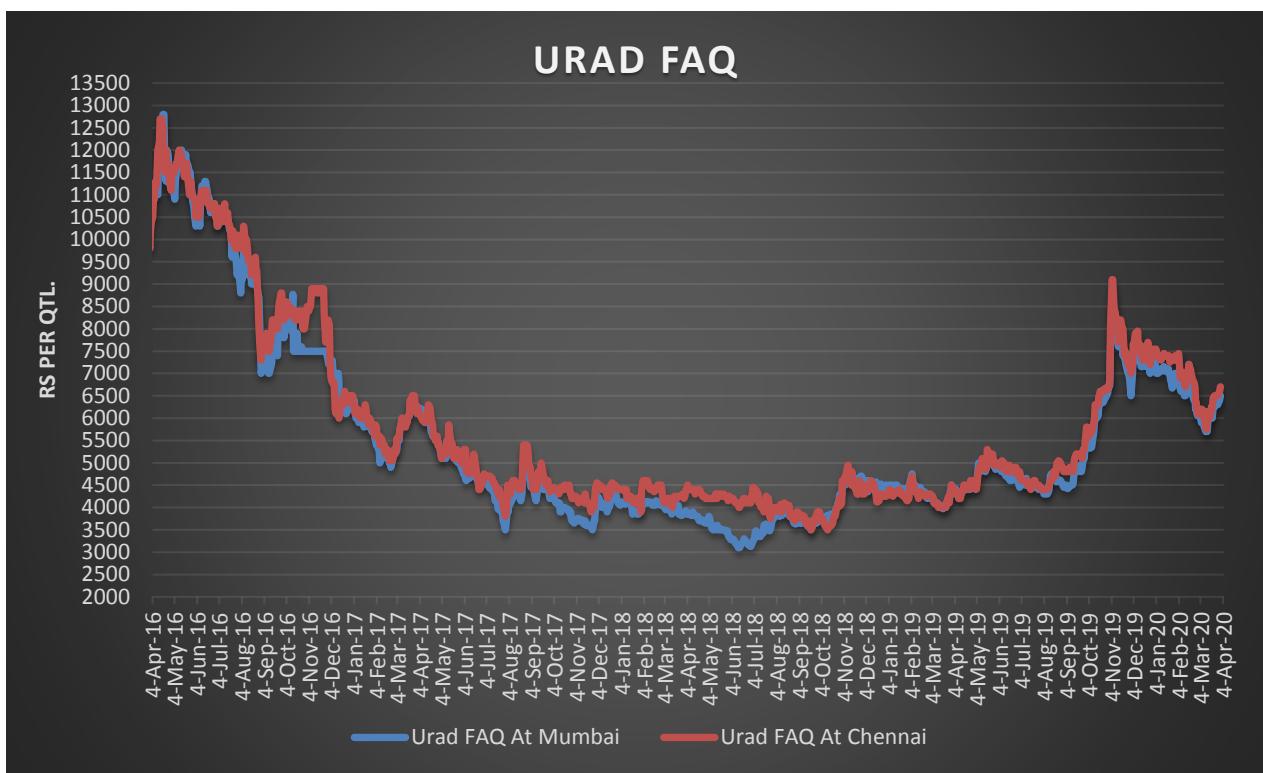

Fundamental remains supportive for Tur cash market in the near term.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Prices declined with commencement of sale by Nafed and increasing possibility of import by mills after March-2020. Time line for 2.5 lakh MT import has been extended to 30th April-2020. Nafed has enough old stock while rabi crop too started hitting the market. License has already been given to importers as DGFT has given additional import quota of 2.5 lakh MT for urad over and above 1.5 lakh MT.. Market sources say that old crop available in Myanmar is around 1 lakh MT while new crop would be available from end March. Right now urad lying at. Even in local market new urad would be available from mid – March. So any spike is unlikely. For fulfilling the shortage gap, Nafed may continue to release stock to control price. In local market urad trade in the range of Rs 5700-6000. Demand from mills is weak at higher level. Urad in Mumbai market traded at Rs 6100-6300 and may decrease to Rs 5700-5800. In Chennai market it is being offered at Rs 6000-6200and SQ at Rs6500-6600 per qtl. Overall trend remains weak.

Seasonality Index depicts range steady to slightly weak tone in the near to medium term.

Price Dynamics:

In Feb, average prices in key markets including Mumbai/was down by 5.34 % percent from 7190 to 6450 per qtl. In Chennai it was down by 7% to 6600. Prices may stay steady to slightly weak in March due to

- Higher import quota and likely new arrival from Rabi crop(winter crop)
- Selling of old stock from central pool
- Weak demand at higher level
- Good crop condition so far and
- Cheaper availability of other pulses.

Market Outlook for March : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

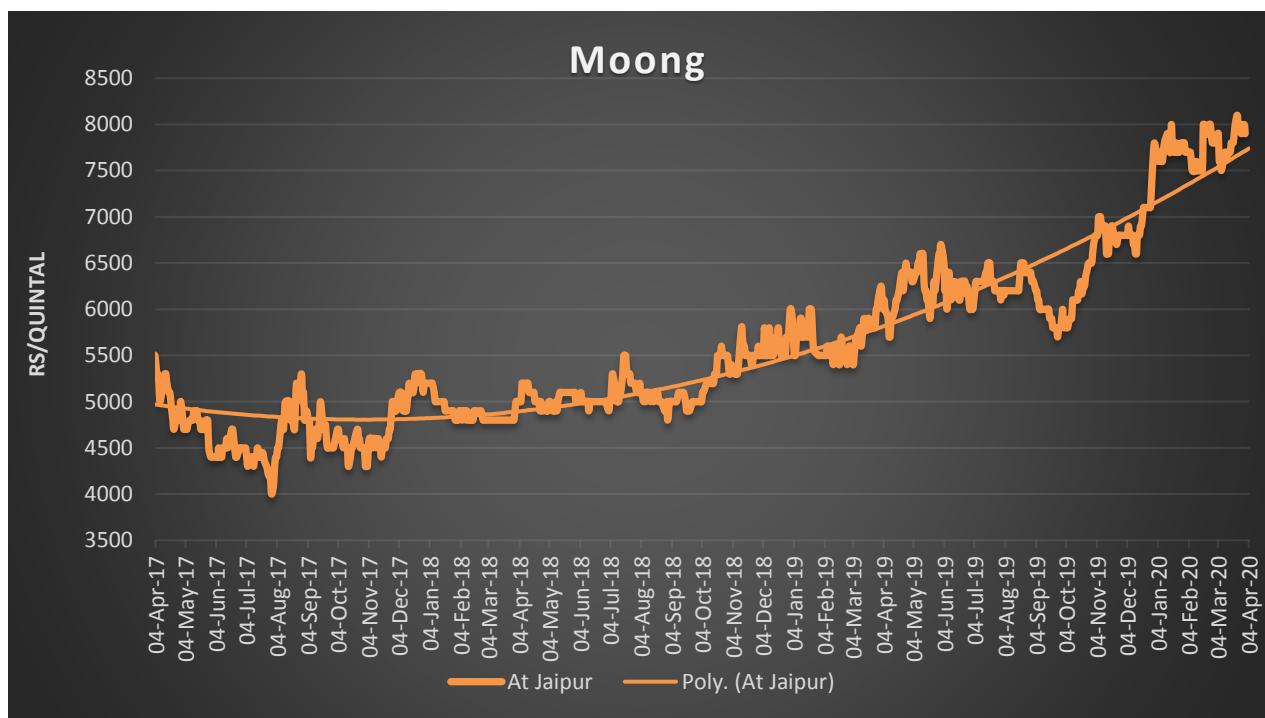

Market Recap:

Moong cash market traded steady to slightly firm amid steady inner tone. Despite shortage of quality moong demand at higher level got affected and stockiest are preferring to release stock slowly at higher level. In Jaipur market moong is being traded at Rs 7700-7750 and may decrease by Rs 200 in coming weeks, if prices continue to move up and govt. may interfere in the market. New crop from rabi season is not expected before mid-March. This week some downward pressure might be seen on cash moong market. Nafed and other agencies have procured 139908.41MT moong so far. Procurement is over in all states except Karnataka and Rajasthan. Old stock is around 92916.54 MT. This means total availability with Nafed and other agencies is 232,884.95 MT now. Govt may use this stock to cool down prices in domestic market. No decision has been taken over increasing import quota so far.

Price Dynamics:

Moong arrivals have started decreasing and there is a shortage of quality crop. It would push prices up in cash market amid procurement drive. Average price decreased by 2 % to 7575 in Jaipur market in Feb. Nafed still has 1.65 lakh MT stock to release and auction started in many states with procurement drive. Right now demand is weak.

Price Trend:

Market is expected to trade firm in March due to:

- Lower arrival in markets
- Shortage of quality crop
- Decreasing stock in central pool
- Increasing disparity for import
- Shortage of moong in global market and
- Rabi crop expected March onward

Seasonality Index depicts firm movement in the near term.

Market Outlook for March: Steady to slightly firm movement is expected after slight correction.
