Pulses-Wise Summary

- Chana
- Matar
- Masoor
- Tur
- Urad
- Moong

Appendix:

- Pulses Wise Technical Outlook For Month
- Indian Pulses- Wise Import- Monthly Analysis
- Inflation
- Seasonality Index
- Indicative Pulses & Processed Pulses Prices (Domestic; Imported; Cnf) & Arrivals
- Pulses Snapshot
- Sowing Progress
- India
- Australia
- Canada
- US

Domestic Market Fundamentals:

- Kharif pulses sowing has entered in last phase now. Indian farmers have covered 40.05 lakh ha under tur so far against 37.09 lakh ha last year by the end of July. It is almost 8 % higher than last year and 93% of normal as on 31st, July 2020. Urad area too is higher by 20.77 % to 33.38 lakh ha so far against 27.64 lakh ha last year. It is higher by 8 % from normal. Indian farmers have showed more interest in moong farming and they have shown 29.57 lakh ha so far against 21.52 lakh ha last year. It is higher by 7% from normal as on 31st July-2020. Kulthi sowing is almost steady at 0.5 lakh ha so far. Farmers have covered 8.87 lakh ha area under other pulses against 7.54 lakh ha last year. Total area under kharif pulses is higher by 19% to 111.92 lakh ha.. Normal area under kharif pulses is 119.9lakh ha. Weather condition has been good so far and crop growth is said to be normal to good despite loss by the flooding in some growing regions. It is a common phenomenon every year. Around 2 to 3 % loss in kharif season is normal in India.**
- Higher area coverage so far for tur this year and poor offtake in cash market have affected normal sentiments.** Despite lower arrival and ongoing festive season bulk buyers are unwilling to buy at this point of time. Imported tur (lemon) was quoted at \$660 per MT at Mumbai. Traders have quoted new tur price at Rs5400 while old at Rs5200 per qtl. Importers are still waiting for import licenses. Agriwatch expects improvement in demand in coming weeks and slight recovery in tur price. If govt. issues license by the end Aug, imported tur would hit market in Sept and its impact would be visible then. Farmers have covered 93% area of normal this year. It may end at 44 to 45 lakh ha under prevailing weather condition. Crop condition of tur is good so far. tur is being traded at Rs5850-5950 per qtl. in Gulberga. Tur may trade range bound in Aug.
- Slashed import duty on masur from 30 to 10 percent in June and revised time frame for import up to 31st of August-2020 have started impacting sentiments in cash markets now.** Import volume from Canada and Australia has started increasing at various ports of India now. A vessel having 57,400 MT lentils has just landed at Mundra port and around 3 lakh MT more is said to be on the way to India. If we combine July and Aug imports, total volume may cross 5 lakh MT by the end of Aug.. Out of total an estimated import, 75 % has been purchased from Canada while the rest from Australia and others. Import volume from US would be limited as duty applicable on US masur is 30 % after deduction of 20 points. If higher volume of import on reduced duty affect domestic market price more than common expectation (likely), govt. would prefer to discontinue it after August. Under prevailing condition masur market is bound to decrease by Rs 300 from current level.
- Pressure on chana cash market seems building up once again as demand for besan remains unexpectedly low** due to impact of COVID-19. Continuous lock down from April to June and restricted lock down in even in July & August have affected besan demand from hotel Industry, restaurants and railways stations and street vendors. Despite 21.5 lakh MT procurement by Nafed against the target of 22.5 lakh MT, chana market is unable to get support at current level. Prices in markets are ruling Rs4000-4300 and it is almost Rs500-800 lower than MSP. Bumper production this year, higher import flow from LDC countries (over 2.5 lakh MT from Apr to Jul) and hefty carry in would not allow chana market to trade up in coming months. Under prevailing condition stake holders should avoid retaining stock for long time. Demand would continue to remain weak. Carry in is going to increase by 38% to 26.94 lakh MT. Problem of plenty would continue to weigh on chana market fundamental.
- Moong sowing is running smoothly and farmers have covered around 96% of normal area so far.** Normal kharif moong area is 30.49 lakh ha. As pace of sowing is higher moong area may cross 33 lakh ha this year. Agriwatch preliminary estimate for kharif moong is production is 14.25 lakh MT. If we add estimated rabi production of 5.57 lakh MT, it brings total to 19.81 lakh MT. It was 19.06 lakh MT last year. However, if kharif area moves up by 33.11 lakh ha (Agriwatch estimate), kharif production would increase accordingly with increase in area. As crop condition is very good, pressure on moong is likely to continue in Aug. Moong in cash market is being traded at Rs 5600-6600 per qtl, lower by around Rs 600 from new set MSP (Rs9196).
- With favorable weather condition kharif urad area has increased by 21% from last year. Farmers have covered 33.38 lakh ha so far against 27.64 lakh ha last year. Normal kharif area for urad is 35.50 lakh ha. Sowing has entered in last phase now. Under normal condition Agriwatch's preliminary production estimate for kharif season**

is 18.60 lakh ha. With estimated production of 6.26 lakh MT in rabi season. It brings total to 24.86 lakh MT. The new season started with 4.44 lakh MT carryin.. So total supply seems at comfortable level with 4 lakh MT allowed import for the year. Expected higher import in July and Aug and good crop condition would pressurize cash market in coming weeks.

- **Peas market traded steady despite negligible import and lower stock in domestic market.** Bumper chana crop are restricting upward momentum.. So any firm momentum is unlikely. Green peas would continue to trade firm as stock in pipe line is almost nil.

International Market Update:

- **For 2020-21, Canadian lentil seeded area rose by 12% to 1.7 Mha, due to good expected returns** compared to other crops. By province, Saskatchewan accounts for 90% of the lentil area, with the remainder seeded in Alberta and Manitoba. Production is forecast to increase to 2.48 Mt, with supply lower due to smaller carry-in stocks. Exports are forecast to be lower at 2.1 Mt. Carry-out stocks are forecast to rise to nearly 0.2 Mt. The average price for all grades and types is forecast to rise from 2019-20, with higher prices from large green and red types. There is an expectation that import demand in the Indian subcontinent will continue to be similar to higher in 2020-21.
- **For 2020-21, the area seeded under chickpeas fell by 24% from 2019-20 due to the lower farm gate prices** received in the previous year. Saskatchewan is expected to account for the majority of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 200 Kt, down 21% from the previous year, due to lower seeded area despite higher expected yields. Supply is forecast to rise from 2019-20. Exports are forecast to rise and carry-out stocks are forecast to fall. The average price is forecast to fall marginally due to a larger world supply, with the expectation of an average grade distribution.
- **Dry peas production in Canada increased from 35.81 lakh MT in 2018-19 to 42.37 lakh MT in 2019-20.** Based on preliminary area and yield estimate production in 2020-21 may increase slightly from 42.37 to 42.75 lakh MT. Seeded area in 2020-21 is 1732 thousand ha in 2020-21 against 1753 thousand ha in 2019-20. The yield of dry peas is expected to increase this year from 2.48 to 2.51 tonne per ha in 2020-21.
- **Australia is going to plant its biggest chickpeas crop in comparison to last three years.** Planting continues in Queensland and NSW. As moisture level in the field is good, farmers are increasing area under chickpeas. As top level soil moisture is lower, farmers are using wheat land for chickpeas planting. Forward delivery for October onward has been heard at \$ 630 per MT. New chickpeas crop may attract higher value. Value of new crop may be affected by any further hiccups caused by COVID-19. It may pressurize Chickpeas price.
- **Lentils stock in Australia is decreasing fast as bulk shipment to B, desh continues with next three months forward** deal was heard. Old crop of lentils would be available by the beginning of the new season. Forward quotes have been heard at \$700-800 per MT, but limited quantity limits the deal too. B, desh has been buying 20,000 MT red small lentils per month. It may continue next three months. Australia exported 80,000 MT lentils in March and big volume export continues in April and May too. So old stock is depleting fast. As prices are moving up, area under lentils may increase by 10% this year. New lentils quotes are \$650-700.
- **As per latest update by NASS, dry pea acreage may be down by 12-13% this year in US** peas producing regions. Farmers may plant 971,000 acres against 11,03,000 acres last year. Intended plantings are down from a year ago in Idaho, Montana, Nebraska, North Dakota, and South Dakota. However, area in Washington may increase by 19% this year.
- **Chickpeas area in the US is likely to decrease by 32% from last year. Small chickpea acreage shows a decline** of only 5%, while large chickpea acreage is expected to decrease by 41%. It is really a big surprise this year.

Monthly Outlook: -Pulses are likely to trade range bound..

Chana (Chickpeas /Bengal Gram):

Fundamental Analysis and Outlook:

Market Recap:

Despite 21.50 lakh Mt procurement chana cash market could not sustain at higher level and decreased in the first half of July. However, it started moving up again with restricted selling by Nafed through auction. Chana may improve further if dal demand improves. Weak buying power of small consumers and restricted buying by bulk users like mills, hotel industry and besan Udhog would continue to cap any spike in chana price. Chana in Delhi market is being traded at Rs4300-4350 and may move up to Rs4500 if dal demand improves. Import from LDC countries too is restricting upward movement in chana. For supporting cash market Nafed may restrict selling and cancel lower bids (below 4200).It may help market to recover. Apart from this private stock holders may prefer to offload chana at every increase of Rs 100 from current level. As there is good stock in private hands (around 10 lakh MT),its impact on price would be visible even in the lean season.In August chana may trade in the range of Rs4200-4500.

All India average price for Chana increased by 0.19 percent from Rs 4193 to 4201 per qtl.during review month. However, Australian Chana (imported) price decreased by 4.34% from Rs5707 to Rs 5408 per 100kg due to higher availability of local chana in domestic market. Following graph illustrates the chana price movement in different markets:

Price Dynamics: Prices are likely to trade range bound in Aug due to

- Bumper production and ample availability in physical market
- Availability of higher stock(old) with Nafed and private hands
- Stockists/millers are avoiding bulk buying at this point of time due to uncertainty over demand.
- Weak futures
- Weak international market and
- Free distribution of pulses to ration card holders up to Nov

Seasonality Index: hints weak movement for spot market in Aug-2020.

Chana Future Market Analysis:

Technical Commentary:

- Decreasing price & OI hint market to trade weak in the short term.
- RSI is moving down in neutral region, hints caution to bulls.
- Prices closed below 9 and 18 days EMAs

Strategy: Sell on rise

Supports & Resistances			S1	S2	PCP	R1	R2

Monthly Trade Call*			Call	Entry	T1	T2	SL
Chana	NCDEX	Sep	Sell below	4220	4150	4100	4250

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

No major change was seen in peas as maximum trade remained suspended due to disruption in major markets due to covid-19 and cheaper availability of chana/chana dal. However, in some markets it traded up due to supply disturbance. With changed status from the free to restricted category and hefty levy imposed on peas, its import remains almost halted even in June and July. The commerce ministry issued a separate harmonized system (HS code) for all peas (including yellow, green dun and kaspa)..It has affected importers badly. Now import deals are not taking place. The fixed quota of 1.5 lakh MT has already been completed. Actually govt. is trying to increase consumption of chana as it is abundantly available in domestic market. Importers have requested govt. to allow green peas import as prices of green peas ruling higher at Rs-11,500 per qtl due to unavailability. Against the quota of 1.5 lakh MT over 5.35 lakh MT has been imported in 2019-20. In 2020-21, no import has been taken place so far. Under prevailing condition govt. is unlikely to allow green peas import. As demand is weak and chana is cheaper, price of yellow peas may move down from current level.

Pea in Kanpur market traded firm at Rs.5500 due to halted arrival and import in domestic market. However, stockists are willing to release old stock due to weak demand and ample availability of chana and chana dal. Against it green pea may trade steady as stock is lower and import remains at negligible level even in-2020.

Market Recap:

Arrival from local crop has started decreasing now in various markets and supply is being made from stocks. As demand at current price is weak, yellow pea would continue to trade range bound in Aug. There is no demand of pea for mixing in chana for besan. Chana is abundantly available right now. So, it would remain price restricting factor in coming months for peas too.

Price Dynamics:

Pea market is expected to trade range bound in Aug due to:-

- Weak demand despite decreased arrival from local markets
- Cheaper availability of chana in domestic market
- No demand for besan as chana availability is higher in domestic market.
- Cheaper availability of other pulses and free distribution of pulses by govt. to ration card holders

Spread With Chana:

Gap has decreased from Rs 590 to Rs1000 in last one month, based on monthly average of the price. Spread is expected to remain at negative zone in Aug on relative movement in Chana prices. Overall outlook seems steady to slightly weak this month.

Market Outlook For Aug: Steady to slightly weak movement is expected.

Masoor (Lentils):

Increasing import flow of masur from Canada and Australia may put pressure on cash masur market. In July and Aug around 5.5 lakh Mt is expected to hit Indian ports and it would going to impact price directly. One vessel having 57400 Mt masur landed at Mundra ports on 4th August and three more vessels having 2 lakh Mt are expected by the end of this month. Its impact is being seen on masur price in domestic market. If prices decrease below Rs5000, govt would not extend lower duty time line beyond August-2020. In that case some recovery is expected again in masur market. So it would be interesting to see the govt's action in the last week of August. It would decide the trend of price. Notably,

govt. had slashed the import duty on masur from effective 30 % to 10 % till 31st August-2020 to cool down prices in domestic market on the beginning of June..

At Mumbai ports importers are selling masur at Rs 5300. As prices are ruling higher than MSP in domestic market, govt agencies are unable to meet their target of 1.21 lakh MT. As of now, only 4000 Mt has been procured on MSP (Rs4800). Old stock with Nafed is around 21,000 MT.

Price Trend In Cash Market:

Price Dynamics:

In July-2020s, average price in key market Kanpur was down by 1.33 % from Rs 5836 to Rs 5758 per qtl. MoM basis. Prices are likely to trade steady to weak in Aug -2020 .

Steady to weak movement is expected due to:

- Higher supply from imported masur and weak demand
- Around 21000 Mt masur available with Nafed
- Increasing import volume after downward revision of duty till 31st Aug-2020.
- Weak demand in retail market due to free distribution of dal by central govt up to Nov

Seasonality Index depicts steady to slightly weak movement in Aug-2020.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Tur cash market improved slightly due to fresh demand from mills and slower pace of arrivals. Supply from Karnataka, MH for other states remains limited at this point of time. In Latur market it traded Rs 100 up to Rs 5600-5650 and may continue to trade firm in coming weeks. Arrival in Latur market was reported at 2000-2500 bags while it was higher in Gulberga. As prices are moving up stockists are unwilling to sell tur at current price. Tur price may move further up by Rs 200-300 from current level. Right now in Gulberga market it is being traded at Rs 5700-5900. However, import is due in this month and quantity is said to be higher. So any spike is unlikely in Aug. Demand is weak despite festive season..

Market Recap:

Tur procurement target (5.45 lakh Mt) has been achieved now. As supply side is tight due to lower volume of import, price of tur is moving up in domestic market. Nafed and FCI has no plan to sell tur immediately so that market may get good support in coming months. However, higher area coverage and likely higher volume of import in Aug –Sep may restrict upward momentum in tur market. Crop size is expected to be 39 lakh Mt in 2020-21

size may cross 37lakh MT. Import quota has been fixed at 4lakh MT for 2020-21. Back log of last year has been imported till 31st May-2020. Cash market is expected to trade in the range of Rs 5200-5500 during June-2020. as per Agriwatch preliminary estimate. With 4 lakh MT import quota for the year would ensure good availability of tur throughout the year. So, any jump in tur market is unlikely in Aug and Sep. Stake holders should sell on rise. New crop would hit market in Nov.

Price Dynamics:

In July-2020, average price in Gulberga market was up by 6.12% from 5601 to Rs 5944 per qtl. due to procurement drive and fresh demand from mills amid lower pace of import. Tur price in July is likely to improve further due to

- Slower pace of import
- Improved demand from mills
- Restricted sale by domestic players
- Higher quotes in Myanmar(\$660 per Mt)
- Uncertainty over weather condition in growing region.

Seasonality Index-depicts steady to slightly firm movement.

Market Outlook for August:

Fundamental remains supportive for Tur cash market in the near term. Longer term outlook remains weak under prevailing fundamentals like higher area coverage, import volume and good crop condition so far.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Possibility of higher import in July and Aug, higher area coverage, good crop condition and new arrival expected by the end of this month would continue to pressurize urad cash market in coming months. The DGFT had decreased the time line for 4 lakh MT urad import quota from 31st March-2021 to 31August-2020. It would impact market sentiments and urad price may decrease by Rs200-300 from current level. Demand is weak and mills are waiting for imported urad that are comparatively lower by Rs300-400 per qtl. from local crop

Even supply side would be adequate in coming weeks. Urad in Mumbai market is being traded at Rs 6000-6050 and may decrease to Rs 5700-5800. In Chennai market it is being offered at Rs 5900-5500 and SQ at Rs6600-6700 per qtl. Overall trend remains weak.

Seasonality Index depicts steady to weak tone in the near to medium term.

Price Dynamics:

In July, average prices in key markets including Mumbai/was down by 6.21 % percent from 6000 per qtl. to 6450 in June. In Chennai it was down by 8.5 % to 5900. Prices may stay steady to slightly weak in Aug due to

- Higher import quota(4.0 lakh MT) and likely arrival of new crop by end Aug
- Selling of old stock from central pool
- Weak demand at higher level
- Good crop condition so far amid higher area coverage and
- Cheaper availability of other pulses.

Market Outlook for Aug : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Increasing kharif area under moong, higher arrival from summer crop and selling intention of Nafed, FCI and stockists before new crop starts hitting the market by end Aug have weakened inner tone in the market. Moong is hitting various markets from MP, Rajasthan, Uttar Pradesh, Bihar and Ranchi region. Weak demand, arrival of light quality moong may drag down moong price by a further Rs100 to 200. Apart from this, kharif moong area is bound to increase and it may cross 33 lakh ha against normal of 27.50 lakh ha. Before this maximum area has been covered in 2016- 17(Over 35 lakh ha). Weather conditions are favourable and good rains fall and higher MSP in growing region are encouraging farmers to grow more moong this kharif season. Under normal conditions, Agriwatch expects 14.25 to 14.50 lakh MT kharif production as per preliminary estimates.

Price Dynamics:

Arrival of new summer moong in Khirkiya and adjoining regions has started decreasing while it is expected to begin from kharif crop by the end of this month.. Crop condition is good amid weak demand. So prices are expected to decrease from current level by Rs 300-400. Mills have restricted buying just ahead of kharif crop. So overall trend seems weak now.

Price Trend:

Market is expected to trade weak in August due to:

- Likely arrival in markets from kharif season crop
- Higher area coverage
- Good crop condition so far
- Old stock in central pool and
- Weak demand due to free distribution of pulses by central and state govt till Nov(Around 10.5 lakh MT) pulses are likely to be distributed among people throughout country.

Seasonality Index depicts weak movement in the near term.

Market Outlook for Aug: Steady to slightly weak movement is expected.

India Comparative Exim Data For 2020-21 with Average CiF:

Pulses Import:

Pulses Export	Chickpea		Tur		Green Peas		Lentil
