- Seasonality Index
- Indicative Pulses & Processed Pulses Prices (Domestic; Imported; Cnf) & Arrivals
- Pulses Snapshot
- Sowing Progress
- India
- Australia
- Canada
- US

Domestic Market Fundamentals:

- Kharif pulses sowing has entered in the last phase now. Indian farmers have covered 136.78 lakh ha** so far against 130.68 lakh ha last year as on 04th Sep-2020. It is almost 4.67 % higher than last year and over 106% of normal (128.89 lakh ha) till date. Tur area is up by 6.33 % to 47.73 lakh ha. Urad area too is higher by 1 % to 37.92 lakh ha so far against 37.57 lakh ha last year. Normal area is 35.53lakh ha. Indian farmers have showed more interest in moong farming and they have shown 35.54 lakh ha so far against 30.53 lakh ha last year. It is higher by 16.41 % from last year and higher by 16.56 % of normal as on 04th Sep-2020. Kulthi sowing is down by 20 % at 0.24 lakh ha so far. Farmers have covered 15.35 lakh ha area under other pulses against 17.39 lakh ha last year. See details on page no -3.
- Cash chana market started moving up from the second fortnight of Aug and may continue** to trade firm in Sep too. The reasons for uptrend are mainly attributed to poor arrival, selling by Nafed at higher price (around Rs4850-4950), firm futures and restricted sale by stockists during festive season. Bulls are active under emerging scenario. Apart from this, the burden of old stock with Nafed is over now as it has been distributed through various govt.'s schemes, including PM Yojna. So now only new stock (around 2.2 lakh MT) is available with Nafed. Govt would prefer to distribute/sale chana at slower pace now, so that prices could sustain above MSP and farmers could maintain same area as last year. Sowing would start from end Oct. Even millers may start fresh buying with increasing demand for dal. Import pace would be limited as govt. has not given any relaxation in import duty, 60 % applicable right now, barring LDC (least developed countries). India has imported around 2.38 lakh MT chana from April to July-2020. Thus, fundamental remains supportive for chana market in Sep too.
- Cash moong market seems under pressure with increasing arrivals from Karnataka, Maharashtra** and soon from Rajasthan and Gujarat. Demand is poor as millers and stockists are waiting for more downside level. However, supply of quality moong is tight against good demand for it. Some quality losses have been recorded in parts of Karnataka and Maharashtra due to heavy rains in recent weeks. However, 5 lakh ha higher area coverage this year would compensate the loss easily. Sowing has reached at record level at 35.54 lakh ha against 30.53 lakh ha last year. Sowing is almost over now. As production is bound to increase, firmness in moong cash market is unlikely. Moong would continue to trade in the range of Rs 6000 to 6800 in Sep against MSP of Rs 7196 per qtl. Demand may improve once arrival reaches its peak (by end Sep). Import is not possible due to disparity.
- Due to non-issuance of import license so far availability of tur at ports is poor. Offtake from mills** has improved in recent weeks. Besides, stockists have started retaining stock sensing delay in import and arrival from new crop not before Dec. All these factors have given support to cash tur market. Even Nafed has sold 1.45 lakh MT tur from its stock out of 5.45 lakh MT. So prices have improved in recent weeks. However, any spike is unlikely as area under tur has reached at 47.73 lakh ha against 44.89 lakh ha last year so far. It is higher by 2.84 lakh ha this year. Sowing is almost over now. Crop condition is good and production is bound to increase by 1.20 lakh MT to 38.39 lakh MT. As demand is improving, price of tur may move further up. In Gulberga market it is being traded at 6300-6400 and at Rs 6000-6100 in Mumbai. So overall sentiments remain firm.
- Slight pressure was seen on urad cash market due to higher area coverage 37.92 lakh ha, around 1% higher** than last year. There are reports of some loss too in Maharashtra and Gujarat. However, good crop condition in major growing parts of M.P, U.P and Raj would compensate the loss easily. Production is bound to increase by 5.47 lakh Mt to 24.86 lakh MT. Apart from this the DGFT has released urad lying on ports with penalty. The quantity is said to be 45,000 MT. However, it is old crop and quality of this crop is poor. It would too affect price sentiments. Arrival from new crop is expected to increase from 4th week of Sep, so pressure might be seen in cash urad market in coming weeks. Demand is normal and may decrease until new arrival pressure builds up. Urad FAQ is being traded at Rs 6100-6200 in Mumbai while SQ is being offered at Rs 7000-7100 per qtl. Overall sentiment is weak.

- **Masur cash market traded steady to slightly firm due to restructured duty (from 10 to 30 % again, applicable from Sep-2020).** India imported around 1.67 lakh MT masur in July and volume is expected to increase to 2 to 2.5 lakh MT in August too. So any spike is unlikely in Sep. The reason behind higher import was reduced duty (10 instead of 30 %) till August. Price may increase again once higher imported volume is consumed in various domestic markets. Right now imported masur is being traded at Rs 5400-5450 at Mumbai. Masur and masur dal demand is normal while supply side in overseas market is increasing with commencement of harvesting in Canada and USA.
- **The DGFT has stopped the clearance of peas at ports and it has helped market to recover again.** There is a shortage of pea in domestic market as stockists have delayed release of their stock in domestic market sensing shortage in coming months. New crop is far away. So steady to slightly firm tone may prevail in the cash market. The DGFT is unwilling to allocate pea quota at this point of time. Govt. is eager to increase consumption of chana in domestic market. Sentiment remains firm.

International Market Update:

- **Stock position of urad in Myanmar is said to be around 2.75 to 3 lakh MT. New crop is expected to hit market in mid-March-2021.** By then Myanmar may export around 1 lakh MT under quota system before new crop hits the market and would consume 50,000 MT for domestic consumption. As India has not extended time line for import, prices in Myanmar may move down by \$50 per MT from current level. Myanmar is offering urad FAQ and SQ at \$770 and \$875 per MT respectively right now. Indian govt. may open import in the later part of the year after accessing the kharif crop size and current loss. Actually price trend in Myanmar would depend on decision on import time line in India. Right now India is waiting for kharif crop, which is heading towards maturity and harvesting is about to commence now.
- **Stock of Tur in Myanmar is said to be around 1.75 to 2 lakh MT from 2019-20 crop while new crop is expected in Feb 2021.** Farmers are shifting 20% tur area to sesame. Indian importers have struck deal of 25,000 MT so far. As import remains restricted so Myanmar govt. has written a letter to Indian govt. to open import soon. However, Indian govt. would not open import analyzing the higher area coverage of tur and good crop condition so far. If prices continue to move up, govt. may consider it to open in Oct-Nov for a limited period. Right now Myanmar is offering tur at \$665 per MT basis Indian ports. Price trend would depend on Indian decision over import time line.
- **Chickpeas traded flat with limited trading activity during the review week. Canada's harvest has commenced now,** while it started three weeks ago in the U.S. Pacific northwest and Montana. Production in Russia is expected to increase this year while production in Argentina may decrease by 50%. Production in Australia may increase considerably. More than double to 7.08 lakh MT this year. However, its variety is desi type which may not compete with North American and Russian crops.
- **For 2020-21, Canadian lentil harvested area rose by 13.16 % to 1.68 Mha, due to good forecasted returns compared to other crops.** It was 1.48 Mha in 2019-20. By province, Saskatchewan accounts for 90% of the lentil area, with the remainder seeded in Alberta and Manitoba. Production is forecast to increase to 2.475 MMT (2.167 MMT last year), with supply lower due to smaller carry-in stocks. Exports are forecast to be lower at 2.1 MMT. Carry-out stocks are forecast to rise to nearly 0.175 MMT. The average price for all grades and types are forecast to rise from 2019-20, with higher prices from large green and red types. It may rule in the range of \$500-530 per metric tonne throughout the year. There is an expectation that import demand in the Indian subcontinent will continue to be similar or slighter higher in 2020-21. The data has been taken from the latest update from Agriculture & Agri food Canada.
- **For 2020-21, the area harvested under chickpeas in Canada fell by 24.26 % from 156 thousand ha in 2019-20 to 118 thousand ha** due to the lower farm gate prices received in the previous year. Saskatchewan accounts for most of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 200 Kt, down 20.63% from the previous year, due to lower seeded area despite higher expected yields. Supply is forecast to rise to

410Kt. Exports are forecast to rise from 105 to 125Kt and carry-out stocks are forecast to fall from 160 to 150Kt in 2020-21. The average price is forecast to fall marginally due to a larger world supply, with the expectation of an average grade distribution. It may hover in the range of \$455 to \$485 per tonne.

- **Chickpeas production in Australia is likely to increase by 2.81 lakh Mt to 7.08 lakh Mt in 2020-21.** The new crop would hit market in End Oct. As demand from India is weak, sentiments remain weak in Sep too. As chickpeas attracts 60% import duty, import volume is negligible from Australia. However, from other LD countries import continues on zero duty. India has imported 2.38 lakh Mt from the least developed countries like Zambia, Mozambique, Tanzania and Malawi during April to July 2020.
- **As per latest updates by NASS, dry pea acreage may be down by 2.53 % this year in US peas producing regions.** Farmers have planted 947,000 acres against projected 971,000 acres last year. Intended plantings are down from a year ago in Idaho, Montana, Nebraska, North Dakota, and South Dakota.
- **Chickpeas projected area in the US is likely to be similar from last year at 305000 acres. Small chickpea acreage shows a decline of only 20% from last year, while large chickpea acreage is expected to decrease by 43% .It is really a big surprise this year.**

Monthly Outlook: -Pulses are likely to trade mixed in Sep.

Source: Agriwatch Note: * Agriwatch preliminary Estimate For 2020-21 for Urad, Moong & Tur

Kharif Pulses:

Urad:

MY 2020-21 started with 4.44 lakh MT carry in stock while production is up by around 5 lakh MT to 24.86 lakh MT this year. It would increase supply to 24.86 lakh MT. Supply side is expected to be at comfortable level under normal condition. Crop condition is normal to good so far.

Moong:

The new season started with 2.33 lakh MT carry in while production is up by around 1.5 lakh MT to 20.64 lakh MT this year. Despite higher production total supply would decrease to 20.64 lakh MT due to lower carry in stock. It would cap market to slip down unexpectedly in 2020.

Tur:

Production of Tur is bound to increase from 37.19 to 38.39 lakh MT this year due to higher area coverage and good crop condition so far. Total supply would increase to 50.95 lakh MT this year. Supply side seems to be tight in ongoing season.

Chana (Chickpeas /Bengal Gram):

Fundamental Analysis and Outlook:

Market Recap:

Chana cash market traded down by Rs 50 taking clue from weak futures and lackluster demand at higher level by mills. Profit booking in futures too helped market to decrease. Demand for chana was weak even in states like M.P., Raj and Delhi. Its impact was also seen in south Indian market. Despite festive season dal demand got affected at higher level. Notably, price of chana increased by Rs 800-1000 per qtl .in last one month and it is considered much higher than normal expectation of the market. So, downward correction of Rs 100-200 is expected now. As new crop is far away and festive demand would emerge again, chana may trade firm again after correction. The burden of old stock with Nafed has already been neutralized now. In current situation chana would continue to rule in the range of Rs 4800-5300 in Sep. Bumper kharif crop like tur, moong and urad and higher volume of imported lentils would cap any unexpected jump in cash chana market. Nafed is unwilling to accept bids below Rs4750.

All India average price for Chana increased by 7.47 percent from Rs 4201 to 4515 per qtl. during the review month. However, Australian Chana (imported) price decreased by 1% from Rs 5458 to Rs 5403 per 100kg due to higher availability and lower price of local chana in domestic market. Following graph illustrates the chana price movement in different markets:

Price Dynamics: Prices are likely to trade range firm in Sep due to:

- Nafed's strategy not to accept chana bids below Rs4700-4750
- Burden of old crop(around 1MMT) decreased to negligible level now
- Improvement in festive demand and increasing offtake of besan
- Firm Futures
- Steady international market
- Decreasing stock with mills(Mills could not build up stock due to lock down during arrival time and
- Govt 's strategy to push up price as sowing season is at hand.

Seasonality Index: hints firm movement for spot market in Sep-2020.

Chana Future Market Analysis:

Technical Commentary:

- Increasing price & OI hint market to trade firm in the medium term.
- RSI is moving up in neutral region, hints caution to bears.
- Prices closed above 9 and 18 days EMAs

Strategy: Buy on dip

Supports & Resistances			S1	S2	PCP	R1	R2
Chana	NCDEX	Oct	4850	4750	4970	5325	5550
Monthly Trade Call*			Call	Entry	T1	T2	SL
Chana	NCDEX	Oct	Buy above	4925	5200	5300	4800

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Pea cash market traded firm taking clue from firm chana cash and futures markets. The DGFT has not cleared pea lying at ports despite short supply in the market. So price is bound to move up again. Stocks at port are dwindling and availability is decreasing continuously in major markets like Kanpur, MH, Kolkata and Indore. However, demand at higher level may get disrupted and price may decrease again if chana trades lower. No import is taking place right now as import limit of 1.5 lakh MT has already been exhausted and no additional quota has been declared so far. With changed status from the free to restricted category and hefty levy imposed on peas, no import is likely in the coming months too. The commerce ministry issued a separate harmonized system (HS code) for all peas (including yellow, green dun and kaspia) and changed its status in the third week of Dec. Now import deals are not taking place given these changes aimed at increasing consumption of chana which is abundantly available in domestic market. Under prevailing conditions govt. is unlikely to allow green peas import. So price of yellow peas will also stay steady at current levels or follow the chana price trend. Steady to slightly firm tone may prevail in Sep.

Pea in Kanpur market traded firm at Rs.5500 due to halted arrival and import in domestic market. However, stockists are willing to release old stock due to weak demand and ample availability of chana and chana dal in the short term. Against it green pea may trade steady as stock is lower and import remains at negligible level even in-2020.

Market Recap:

Arrival from local crop has started decreasing now in various markets and supply is being made from stocks. As demand at current price is weak, yellow pea would continue to trade range bound in Sep. There is no demand of pea for mixing in chana for besan. Chana is abundantly available right now. So, it would remain price restricting factor in coming months for pea too. Peas in Kanpur market also traded up at Rs 6300-6400 due to halted arrivals in domestic

market and almost no import during last four months. Stockists too are willing to release old stock at higher price. It may lend some support to peas in Kanpur market.

Price Dynamics:

Pea market is expected to trade range bound in Sep due to:-

- Weak demand despite decreased arrival from local markets
- Cheaper availability of chana in domestic market
- No demand for besan as chana availability is higher in domestic market.
- Cheaper availability of other pulses and free distribution of pulses by govt. to ration card holders
- Weak international market and
- Fear of illegal entry from B,desh

Spread With Chana:

Gap has increased from Rs 968 to Rs1239 in last one month, based on monthly average of the price. Spread is expected to remain at negative zone in Sep on relative movement in Chana prices.

Market Outlook For Sep: Range bound movement is expected in Sep.

Masoor (Lentils):

Increasing import flow of masur from Canada and Australia may put pressure on cash masur market. In July and Aug combined around 4.0 lakh Mt was expected to hit Indian ports. Govt. has restructured duty and restored it to 30 %, applicable from Sep. It has lent support to cash market. India imported 1.67 lakh Mt lentils in July and the rest is expected in Aug. Data is awaited now. It is going to impact price directly. If prices decrease below Rs 5000 due to higher import volume, Nafed would not release old stock. In that case, some recovery is expected again in masur market.. Notably, govt. had slashed the import duty on masur from effective 30 % to 10 % till 31st August-2020 to cool down prices in domestic market on the beginning of June. As duty has been enhanced again, prices may recover in lean season.

Stock at ports has started increasing now. At Mumbai ports importers are selling masur at Rs 5350-5450. As prices are ruling higher than MSP in domestic market, govt.s agencies could not procure 1.21 lakh MT, set target for the year. As of now, only 4200 Mt has been procured on MSP (Rs4800). Old stock with Nafed is around 21,000 MT. Future course of price depends on govt's decision on enhanced import duty,, applicable 30% after August.

Price Trend In Cash Market:

Price Dynamics:

In Sep-2020, average price in key market Kanpur was up by 0.34 % from Rs 5758 to Rs 5778 per qtl. MoM basis. Prices are likely to trade steady to weak in Sep -2020 .

Steady to weak movement is expected due to:

- Higher supply from imported masur
- Weak demand from west Bengal for local crop
- Availability of 21000 Mt masur with Nafed
- Tight supply side is expected not before Oct(lean season) and
- Weak demand in retail market due to free distribution of dal by central govt up to Nov

Seasonality Index depicts steady to slightly weak movement in Sep-2020.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Stock at port is said to be lower than normal at this point of time. Import licenses have not been issued to importers as yet, so millers are buying tur from local markets. Arrivals in local market are decreasing so market is moving up slowly. Relaxation from lock down in various states has increased demand for dal and millers have increased buying. Tur was quoted at Rs5900-6150 in Mumbai market. It is being traded at Rs 6300-6450 in Gulberga market. Overall sentiment seems firm. As importers may start buying in Myanmar, tur price has stayed steady there at \$ 665 per MT basis Indian ports for new crop and \$645 per MT for old crop. Tur price may move further up by Rs200- from current levels.

Market Recap:

The production share of tur in total kharif pulses production is 34.5 % and farmers have covered around 108 % (47.74lakh ha) area of normal (44.29 lakh ha). Planting is almost over and area may end at 48 lakh ha. Higher offtake from mills and improved demand for tur dal amid lower pace of import have helped market to trade up by Rs 150-250 in various markets. Apart from renewed demand, arrivals in major markets are decreasing now amid restricted sales by Nafed and private trade. It would continue to support tur cash market this week too. Demand for tur dal may increase further in the coming weeks due to festive season despite good planting and crop condition so far. As import licenses are yet to be issued, volume of imports from allocated quota of 4 lakh Mt is expected to be lower in Sep, even if licenses are issued in the second half of the month.

Price Dynamics:

In Aug-2020, average price in Gulberga market was up by 1.66% from 5944 to Rs 6043 per qtl. due to non-issuance of import license to millers and fresh demand from mills amid lower pace of import. Tur price in Sep is likely to improve further due to:

- Delay in import license
- Improved demand from mills
- New crop is three months away from now
- Restricted sale by domestic players
- Higher quotes in Myanmar(\$665-70 per Mt)
- Uncertainty over weather's condition in growing region.

Seasonality Index-depicts steady to slightly firm movement.

Market Outlook for Sep:

Fundamental remains supportive for Tur cash market in the near term. Longer term outlook remains weak under prevailing fundamentals like higher area coverage, import volume and good crop condition so far.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Despite some recovery in urad cash market uptrend is unlikely to continue as new crop is about to hit market from the second week of Sep. No major loss has been reported so far except some pockets of M.P, MH and Gujarat. Higher rainfall would not affect size but quality of the crop, if rains continues for a week. Import flow of urad remained slow in August as margin for import is decreasing with declining prices in the domestic market and prospects of good kharif crop this year. Import time line has not been extended and it may cap market coming down below MSP.

Quotes for FAQ urad moved down by \$5 to \$765 per MT while SQ stay steady at \$870 per MT basis Indian port. Prices in domestic market moved up slightly to Rs 6350 for FAQ and Rs 7000 for SQ at week end because of non- extension for import time line. If demand improves and new arrival is delayed, prices would increase against normal expectation. Arrival pressure from kharif crop is expected from third week of Sep.

Seasonality Index depicts steady to weak tone in the near to medium term.

Price Dynamics:

In Aug, average prices in key markets including Mumbai/was up by 2.31 % percent from 6001 per qtl. to 6140.. In Chennai it was by 8.up by 2.2 % to 6135. Prices may stay steady to slightly weak in Sep due to:

- Higher area coverage and good crop condition
- New arrival expected soon(mid Sep)
- Clearance of imported urad from ports
- Selling of old stock from central pool
- Weak demand at higher level and
- Cheaper availability of other pulses.

Market Outlook for Sep : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Prices are mostly steady and pressure might begin, as arrivals from new kharif season has started from Karnataka and MH. Besides, higher area coverage and good crop condition so far would not allow market to move up from current level. Arrival from MP is expected now, followed by Telangana and Gujarat. Arrival from summer crop is over now. If demand improves, slight recovery might be seen this week. There is no parity for import as moong price is ruling lower than Myanmar right now. Expected huge crop size in Rajasthan, stockists prefer to sell now So, overall trend seems weak in the medium term despite minor loss in Karnataka (2500 ha) and Telangana (650 ha) by flooding.

Price Dynamics:

This year kharif moong area has crossed 2016-17 level (35.54 lakh ha) against normal of 30.49 lakh ha. Before this, maximum area was covered in 2016- 17 when over 35 lakh ha was sown. Weather conditions are favorable for moong crop in all states except Karnataka and Telangana. Since the proposed MSP of moong is higher at Rs 7196 for 2020-21 against Rs 7050 for ongoing season, it would encourage farmers to cover more area under kharif moong. Under normal conditions, Agriwatch expects 15 to 16 lakh MT kharif production as per preliminary estimates after discounting the flood and higher rains generated loss.

Price Trend:

Market is expected to trade weak in Sep due to:

- Commencement of new arrival in markets from kharif crop
- Higher area coverage
- Good crop condition so far
- Old stock in central pool and
- Weak demand due to free distribution of pulses by central and state govt till Nov (Around 10.5 lakh MT) pulses are likely to be distributed among people throughout country.

Seasonality Index depicts weak movement in the near term.

Market Outlook for Sep: Steady to slightly weak movement is expected.
