

Pulses Monthly Research Report: October-2020

Contents:

- **Pulses Sector-Highlights**
- Domestic & Global
- **Supply & Demand**
- **Area & Yield Estimates (Kharif)**
- **Kharif Progressive Sowing**

Pulses-Wise Analysis

- Chana (Chick Pea)
- Matar (Dried peas)
- Masoor (Lentils)
- Tur (Pigeon Pea)
- Urad (Black Matpe)
- Moong (Green Gram)

Appendix:

- Agri Commodity Indices Aug -2020:
- Indian Pulses- Wise Import- Monthly Analysis
- Price Trend (Seasonality)
- Indicative Pulses & Processed Pulses Prices (Domestic; Imported; Cnf) & Arrivals
- India
- Australia
- Canada
- US

Pulses Sector-Highlights

- **Kharif pulses sowing is over now. Indian farmers have covered 139.37 lakh ha this year against 133.95 lakh ha last year. It is 4.05 % higher than last year. Normal area under kharif pulses is 128.89 lakh ha . Tur area is up by 5.69 % to 48.50 lakh ha. Urad area too is higher by 1.14 % to 38.96 lakh ha. The highest increase was registered for moong that increased by 15.58 to 35.84 lakh ha. However, other pulses area decrease by around 12 % this year.**
- **The Ministry of Agriculture & Farmers Welfare accorded approval for procurement of 13.77 lakh metric tons of pulses and oilseeds for kharif marketing season -2020-21 in states like Tamil Nadu, Karnataka, MH, Telangana and Haryana.**
- **The DGFT has issued public notification no. 22 dated 01.10.2020, regarding the allocation of quota for import of urad. According to the notice, 1.5 Lakh MTs of Urad shall be distributed equally or applied quantity (whichever is lower) only to the eligible and verified applicants. Importers can import it till 31st March-2021.**
- **Govt. has increased MSP for chana from Rs 4875 to Rs 5100 and masur from Rs 4800 to 5100 for MY 2020-21. Higher MSP should encourage farmers to cover more area under chana and masur in the rabi season, that starts in Oct. MSP for other rabi crops too has been increased.**
- **Chana (Bengal gram) cash market may continue to trade firm due to acceptance of higher bids (Rs5350-5960) by Nafed, ongoing demand for seed, improved demand for processed daal and restricted volume of import. Apart from it stockists too have restricted sales as new crop is at least 5 months away.**
- **Stock of Kabuli chana (dollar/white chana) is low and would continue to decrease as demand for seed is expected now. Farmers use 50,000 MT as seed. New crop would be available not before February. Even import volume would be limited as parity is not in favor of India. Production was 5 lakh Mt down to 15 lakh Mt last year. Sentiment remains firm.**
- **Despite higher area coverage (48.50 lakh ha) this year and favorable weather condition so far in major growing region tur cash market continued to trade firm. Reasons behind current uptrend are non –issuance of import licenses, restricted sales by Nafed/stockists and an improved demand for daal. Sentiments remain firm.**
- **Recent rains have delayed urad arrivals in major markets while demand for daal continues to increase. Area is almost similar as last year if we discount area loss by flooding this year. Restricted quantity (1.5 lakh Mt against allocated 4 lakh Mt for the year) of import and halted sales by stockists/farmers remain supportive.**
- **Despite higher area coverage (Over 15%) and increasing arrivals in major markets of producing regions moong traded firm taking clue from firmness in other pulses. Demand is improving while procurement is on in Karnataka and MH.It may commence soon in Raj and M.P. soon. As crop size is large, prices are expected to decrease in Oct-2020.**
- **Masur market traded steady to slightly weak during the review week, due to the revision of import duty again from 30 to 10 % for 52 days till 31st Oct-2020.Demand for daal is weak too. Around 4 lakh MT was imported in July and Aug-2020 at the lower duty which increased availability of masur in**

domestic market. Import volume would be higher in Sep-Oct too, so prices are unlikely to move up beyond a certain level in Oct.

- **Peas import remains halted as the DGFT has not allowed an additional import beyond 1.5 lakh Mt for the ongoing season.** Stock at ports is low while arrival too in domestic markets are decreasing. New crop is still 4-5 months away, so steady tone may prevail. Demand is weak at higher level. Consumers preferred to shift to other pulses.

Global Market:

- **Global lentil markets continued to trade firm and the firm tone may continue on demand from countries such as India, Sri Lanka and the United Arab Emirates.** Higher demand from these countries has fueled expectations among importers and exporters that prices are likely to maintain an upward trend through the balance of the marketing year.
- **Lentils production in Australia is expected to decrease by 6.89% from 5.34 to 4.97 lakh tons in 2020-21.** It is due to lower coverage (6.11%) of area from last year. Victoria and South Australia are major producing regions that contribute 92% of total production.
- **Chickpeas production in Australia is expected to increase by 152 % to 7.08 lakh tons in 2020-21.** It was 2.81 lakhMt last year. Australian farmers increased chickpeas area by 93% this year. New crop is expected from Oct end Nov-2020.
- **US chickpea area for 2020-21 is forecast by the USDA to fall by 44% to 0.25 million acres.** With similar yields and lower abandonment, 2020-21 US chickpea production is forecast by USDA at below 0.2 Mt, down 38% from the previous year.
- **In the US, the area seeded to lentils for 2020-21 is forecast by the USDA at just over 0.5 million acres,** 7% higher than 2019-20 due to higher area seeded in Montana being offset by lower seeded area in North Dakota. With higher yields and lower abandonment, US lentil production is forecast by USDA at below 0.3 Mt.
- **For 2020-21, Canadian lentil seeded area rose by 11.96 % to 1.72 Mha, due to good forecasted returns** compared to other crops. It was 1.53Mha in 2019-20. Production is forecast to increase to 3.06 MMT (2.24MMT last year).
- **Field pea markets traded firm last week taking clue from good opening season export movement.** As per Canadian Grain Commission, exporters in Canada loaded 630,900 metric tons (MT) of peas for bulk export in September, up from 102,400 in August and 508,900 the same month last year.
- **For 2020-21, the area seeded under chickpeas in Canada fell by 23.89% from 159 thousand ha in 2019-20 to 121 thousand ha** due to the lower farm gate prices received in the previous year. Production is forecast by AAFC at 239 Kt, due to lower seeded area despite higher expected yields.
- **As per Turkish Statistical Institute (TURKSTAT), Turkey imported 40,774 metric tons (MT) lentils in July-2020** against 89,693 MT in June-2020. Despite lower volume of import in July total imports so far increased to 408,932 MT during the ongoing calendar year .

Kharif Pulses:
Urad:

MY 2020-21 started with 2.37 lakh MT carry in stock while production is up by 4.86 lakh MT to 24.25 lakh MT this year. It would increase supply to 30.62 lakh MT including imports. Supply side is hence expected to remain slightly tight. Crop condition is normal to good except some pockets of Maharashtra, Madhya Pradesh and Gujarat, so far.

Moong:

The new season started with 2.10 lakh MT carry in while production is up by around 1.9 lakh MT to 20.96 lakh MT this year. Despite higher production total supply would decrease to 24.56 lakh MT due to lower carry in stock. So the prices should remain on the higher side in 2020.

Tur:

Production of Tur is likely to increase from 37.19 to 39.25 lakh MT this year due to higher area coverage and good crop condition so far. Total supply would increase to 51.31 lakh MT this year. Supply side seems similar in the ongoing season as in the last year.

Area & Yield Estimates For Kharif Tur, Urad & Moong-2020-21:

Agriwatch APY Estimate For Tur-2020-21			
State	Area (000 ha)	Yield (kg/ ha)	Production(' 000' MT)
Karnataka	1280	675.00	864
Maharashtra	1247	918.75	1145.68
Madhya Pradesh	412	717.14	295.46

Chana (Chickpeas /Bengal Gram):

Market Recap:

Good demand for daal and active buying by millers have continued to push up chana prices in domestic markets. Arrivals of chana in all major markets are decreasing day by day while demand for seed too remains supportive. Apart from mills, stockists too are active buyers even at these higher prices. Nafed is selling limited quantities and has accepted bids in the range of Rs5350-5960 in various states. This may push the prices up in the coming weeks. New crop is 4 months away and there is no import parity due to high duty (60%). Agriwatch expects a downward correction of Rs100 at this level. Stakeholders should book profit at this level and wait for the correction. At Rs 5250-5350, they can buy it again. Overall inner tone seems firm right now.

Traders say that pulses market moved unexpectedly up during last one month and the main reason behind it is said to be the new agriculture laws. Earlier prices used to increase after private buying coming to an end. This time prices have moved up when half of the crops are still in the field. Market sources say that millers became active after the centre's removal of the cap on stocks. Higher buying by private trades, losses by rains and flooding in some states like Maharashtra, Karnataka and Madhya Pradesh and restricted release by Nafed are main reasons that are driving price up in the market. Apart from it seed demand too remains supportive. Following graph illustrates chana price movement in different markets:

All India average price for Chana increased by 13.68 percent from Rs 4515 to 5133 per qtl. during the review month. However, Australian Chana (imported) price increased by 1.25% from Rs 5403 to Rs 5471 per 100kg due to higher availability and lower price of local chana in domestic market.

Price Dynamics: Prices are likely to trade firm in Oct due to:

- *Nafed's strategy not to accept chana bids below Rs 5350-5400*
- *Burden of old crop almost lightened due to free distribution through PDS*
- *Higher MSP and the new agriculture laws*
- *Limited import volume & restricted sales by private stockists*
- *Firm Futures*
- *Firm international market and*
- *Improved demand for seed and daal in festive season.*

Seasonality Index: hints firm movement for spot market in Oct-2020.

Internationally, Chickpeas traded flat with limited trading activity during the review week. Canada's harvest has commenced now, while it started three weeks ago in the U.S. Pacific northwest and Montana. Production in Russia is expected to increase this year while production in Argentina may decrease by 50%. Production in Australia may increase considerably. More than double to 7.08 lakh MT this year. It was 2.81 lakh MT last year. However, its variety is desi type which may not compete with North American and Russian crops.

For 2020-21, the area under chickpeas in Canada fell by 26.28 % from 156 thousand ha in 2019-20 to 115 thousand ha due to the lower farm gate prices received in the previous year. Saskatchewan accounts for most of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 239 Kt, down 5.15 % from the previous year, due to lower seeded area despite higher expected yields. Supply is forecast to rise to 539Kt. Exports are forecast to rise from 105 to 125Kt and carry-out stocks are forecast to rise from 250 to 330Kt in 2020-21. The average price is forecast to fall marginally due to a larger world supply, with the expectation of an average grade distribution. It may hover in the range of \$460 to \$500 per tonne.

Chickpeas projected area in the US is likely to be similar as last year at 305000 acres. Small chickpea acreage shows a decline of only 20% from last year, while large chickpea acreage is expected to decrease by 43% .It is really a big surprise this year.

India is unlikely to import more than 2.5 lakh MT given the ample domestic availability.

Chana Future Market Analysis:

Technical Commentary:

- Increasing price & OI hint market to trade firm in the medium term.
- RSI is moving up in over sold region, hints caution to bulls.
- Prices closed above 9 and 18 days EMAs

Strategy: Buy on dip

*Don't carry forward position for the next month

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Stock of peas at ports is depleting fast and arrivals in local markets too have decreased to a negligible level. Stockists who have stock, are unwilling to sell it sensing shortage of peas in domestic markets. Import is not taking place and the govt. is not in favor of allowing import above 1.5 lakh MT. As prices are lower in global market, Bangladesh and Nepal are buying more matar hoping for an arbitrage opportunity in selling to India. Demand is weak as other pulses are available comparatively at cheaper price. Matar in Kanpur market is being traded at Rs6600-6650 per qtl. At port it has already crossed Rs7800.

Despite weak demand for peas and its daal prices are expected to stay steady to firm Govt. is not in favor of additional import despite uptrend in domestic pulses market. As prices are higher, area may increase this year by 5 to 10 percent. Sowing starts from mid Oct. Following chart shows price movement in various markets:

At the global level, Canada is exporting higher volume of peas as current buyers like EU, Pak, Sri Lanka and Bangladesh have increased buying, taking advantage of lower prices in the global market.. Bangladesh and Nepal may buy higher quantity in Oct-Nov due to lower prices in the global market and sell it in India as there is good arbitrage opportunity for them.

Field pea markets traded firm last week taking clue from good opening season export movement. As per Canadian Grain Commission, exporters in Canada loaded 630,900 metric tons (MT) of peas for bulk export in September, up from 102,400 in August and 508,900 the same month last year.

Price Dynamics:

Pea market is expected to trade steady to firm in Oct due to:-

- Depleting stock at ports and domestic markets
- Restriction on import volume at 1.5 lakh MT annually.
- Strong demand for seed
- New crop four to five months away from now and
- Firm international market

Spread With Chana:

Gap has increased from Rs 967 to Rs1306 in last one month, based on monthly average of the price. Spread is expected to remain at negative zone in Oct on relative movement in Chana prices.

Market Outlook For Oct: Steady to firm movement is expected in Oct.

Masoor (Lentils):

Masur market traded steady to slightly weak during the review month, due to the revision of import duty again from 30 to 10 % for 52 days till 31st Oct-2020. Demand for daal is weak too. Around 4 lakh MT was imported in July and Aug-2020 at the lower duty which increased availability of masur in domestic market. Import volume would be higher in Sep-Oct too, so prices are unlikely to move up beyond a certain level (Rs5300-5650). Stock at ports is said to be around 4.5 lakh MT. Despite the higher import, prices are not likely to decrease below Rs5000 as stockists are unwilling to sell it below 5000 even in producing centres It

may help retain acreages when sowing begins in mid Oct. Besides, govt has increased MSP for masur from Rs4800 to Rs5100 for MY 2020-21. So steady to firm movement is expected in cash market this month..

At Mumbai ports importers are selling masur at Rs 5450-5550. As prices are ruling higher than MSP in domestic market, govt agencies could not procure 1.21 lakh MT, set target for the year. As of now, only 4200 Mt have been procured on MSP (Rs4800). Old stock with Nafed is around 21,000 MT. Future course of price depends on govt's import strategy. Import at 10 % duty would continue till 31st Oct-2020.

For 2020-21, Canadian lentil production rose by 36.70 % to 30.65 lakh MT, due to higher area coverage and good yield. It was 22.42 lakh MT in 2019-20. By province, Saskatchewan accounts for 90% of the lentil area, with the remainder seeded in Alberta and Manitoba. Exports are forecast to be lower at 2.4 MMT. Carry-out stocks are forecast to rise to nearly 0.475 MMT. The average price for all grades and types are forecast to rise from 2019-20, with higher prices from large green and red types. It may rule in the range of \$520-540 per metric tonne throughout the year. There is an expectation that import demand in the Indian subcontinent will continue to be similar or slighter higher in 2020-21. The data has been taken from the latest update from Agriculture & Agri food Canada.

Price Trend In Cash Market:

Price Dynamics:

In Oct-2020, average price in key market Kanpur was up by 2.57 % from Rs 5782 to Rs 5954 per qtl. MoM basis. Prices are likely to trade range bound in Oct -2020

Range bound movement is expected due to:

- *Eased supply side with higher import volume*
- *Higher import likely in Oct-2020 due to reduced duty from 30 to 10 % again, effective till 31st Oct-2020*
- *Availability of 21000 Mt masur with Nafed*
- *Area is likely to improve due to higher prevailing price and*
- *Demand from retail market is weak*

Seasonality Index depicts steady to slightly firm movement in Oct-2020.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Active buying by millers and improved demand for daal in cash market pushed up tur price by Rs 1000-1200 to 6300-7550 per qtl. during the month under review. Lemon tur stock at ports like Chennai, Mumbai and Kolkata are depleting fast. Importers have increased quotes by 800 to Rs7000 in one month. Import volume remains limited due to non-issuance of import licenses. Arrivals in local markets too are negligible. Prices may move up further despite 5% higher area coverage this year. Old lemon tur too are being quoted at Rs 7200-7300 per qtl. Arrivals have decreased in major centers like Jalgaon, Akola and Amravati line. Local tur in Gulberga too moved up to Rs 7500-7600 and it may move up further by Rs 200 to 300 under prevailing market fundamentals. At this level Nafed may release stock to cool down price. New crop is still two month away from now. It has over 3.6 lakh Mt tur stock but has not taken a decision over tur sale as yet.

Crop condition is good so far. Sowing is almost over now. Indian farmers have covered 48.49 lakh ha against 45.88 lakh ha last year. As per Agriwatch estimate India may harvest 39.25 lakh Mt crop this year. Weather condition in next two months, govt.'s timing of issuance of licenses are very crucial for driving price up and down in coming weeks.

Market Recap:

As supply side is tight due to halted import through private channels in domestic market, stockists are unwilling to sell stock. It is driving price up, supported by good festive demand. New crop would hit market in end Dec. Even Myanmar has increased quotes from \$700 to 730 per Mt. Import through G to G channel is taking place from Tanzania and Mozambique. It is being offered at Rs 6500-6800. Stock of Tur in Myanmar is said to be around 1 to 1.25 lakh MT from 2019-20 crop while new crop is expected in Feb 2021. Farmers have shifted 20% tur area to sesame. Indian importers have struck deal of 60,000MT so far and waiting for issuance of licenses now. As import remains restricted so Myanmar govt. has written a letter to Indian govt. to open import soon. However, Indian govt. would not open import analyzing the higher area coverage of tur and good crop condition so far. If prices continue to move up, govt. may consider opening in Oct-Nov for a limited period.

Price Dynamics:

In Sep-2020, average price in Gulberga market was up by 10.72% from 6043 to Rs 6694 per qtl. due to non-issuance of import license to millers and fresh demand from mills amid halted imports through private channels.

. Tur price in Oct is likely to improve further due to:

- Delay in import licenses
- Likely delay in arrivals due to high moisture in the field
- Improved demand from mills
- New crop is two months away from now
- Restricted sale by domestic players
- Higher quotes in Myanmar(\$725-30 per Mt)
- Uncertainty over weather's condition in growing region.

Seasonality Index-depicts steady to slightly firm movement.

Market Outlook for Oct:

Fundamental remains supportive for Tur cash market in the near to medium term. Longer term outlook remains weak under prevailing fundamentals like higher area coverage, import volume and good crop condition so far.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Taking a call on unexpectedly firm cash market and delayed arrivals from new crop, govt. has allowed 1.5 lakh Mt urad import from immediate effect. However, it will take at least 15 days to hit Indian ports. With opening of weather, arrivals are expected to increase in the coming weeks. Apart from this demand for daal at higher level got disrupted. So, a downward correction is expected in urad cash market. Crop condition is average to normal and no major area loss has been reported so far except some quality loss in pockets of Satna, Nagour, Marathwara, Vidarbha and Jalgaon due to heavy rains. Total 35,000-45,000 ha is said to be destroyed. However, the loss is likely to be compensated by good crop condition and better yield in other regions. Delay in arrival, restricted import (1.5 lakh Mt) for limited period (during arrival season) may cap urad price slipping below MSP this year (Rs6000 per qtl.). Pipeline is almost vacant. So, stockists/millers are active now. Urad FAQ is being traded at Rs 7500 in Mumbai and at Rs7600-7650 in Chennai.

Quotes for FAQ urad moved up by \$70 to \$970 per MT while SQ moved up by \$140 to \$1150 per MT basis Indian port. However, no trade has been reported at this level in the first week of Oct. Stockists are unwilling to release stock and may hold it till Oct as prices are still ruling at higher level. Nafed may start selling urad taking advantage of higher price and having intension of increasing supply in the cash market. Mills are waiting for higher arrivals.

Stock position of urad in Myanmar is said to be around 2 to 2.25 lakh MT. New crop is expected to hit market in mid-March-2021. By then Myanmar may export around 1 lakh MT under quota system before new crop hits the market and would consume 50,000 MT for domestic consumption. As India has allowed only 1.5 lakh Mt import, pressure on price in Myanmar might be seen. Actually price trend in Myanmar would depend on decision on import time line and quantity approved by the Indian govt. Under prevailing market fundamental market may trade steady to slightly weak in Oct.

Seasonality Index depicts steady to weak tone in the medium term.

Price Dynamics:

In Sep, average prices in key markets including Mumbai/was up by 10.97 % percent from 6140 per qtl. to 6814. In Chennai it was 9.24 up to 6985. Prices may stay steady to slightly weak in Oct due to:

- Order issued for 1.5 lakh Mt import
- Arrival is likely to increase from the late sown local crop
- Higher area coverage and good crop condition
- Likely release by Nafed in bulk volume and
- Weak demand at higher level

Market Outlook for Oct : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Downward trend in moong cash market could not sustain as other pulses like chana, tur urad and peas moved up smartly in Sept. despite good pace of arrival in producing regions. Procurement of moong has started in states like Karnataka, Maharashtra and is likely to start in Rajasthan soon. As rains have affected quality of moong, so price range is wider this year. It is being traded at Rs 6000-7500, depending on quality of the crop. If demand improves, slight recovery might be seen for a shorter time. There is no parity for import as moong price is ruling lower than Myanmar right now. Expecting a huge crop from Rajasthan, stockists are preferring to sell now. So, overall trend seems weak in the medium term despite minor loss in Karnataka (3500 ha) and Telangana (750 ha) by flooding.

Sowing has reached record levels at 35.84 lakh ha against 31.01 lakh ha last year. Sowing is almost over now. As production is bound to increase, firmness in moong cash market is unlikely. Moong would continue to trade in the range of Rs 6000 to 7500 in Oct against MSP of Rs 7196 per qtl. Demand may improve once arrival reaches its peak (by mid Oct). Import is not possible due to disparity.

Price Dynamics:

Under normal conditions, Agriwatch expects 15.4 to 15.5 lakh MT kharif production as per preliminary estimates after discounting the flood and higher rains generated loss. As demand at higher level is weak, pressure on prices may continue. There is no export parity as domestic price is as seen in Myanmar.

Price Trend:

Market is expected to trade weak in Oct due to:

- Commencement of new arrival in markets from kharif crop
- Higher area coverage and good crop condition so far
- Old stock in central pool and
- Weak demand

Seasonality Index depicts weak movement in the near term.

Market Outlook for Oct: Steady to slightly weak movement is expected.

Agri Commodity Indices Aug -2020:

Pulses WPI: Pulses WPI increased by 1 points from 159.4 in July to 159.5 in Aug-2020
