- US

Pulses Sector-Highlights

- **With favorable weather conditions, rabi pulses sowing is running smoothly.** Farmers have planted 36.43 lakh ha area so far against normal of 144.89 lakh ha. Of this, farmers have covered 25.1 lakh ha area under gram against normal of 92.77 lakh ha. Farmers have covered 3.7 lakh ha under lentils(normal 14.24 lakh ha),2.86 lakh ha under field pea (normal 8.78 lakh ha),0.92 lakh ha under urad (normal 8.93 lakh ha),0.11 lakh ha under moong(normal 9.86 lakh ha),0.91 lakh ha under other pulses(normal 4.14 lakh ha).Gram area is running ahead by 44% from last year so far, field pea up by 101%,lentils up by 89% ,other pulses up by 9.64%. However, urad and moong coverage is lower by 1 and 45 % so far. Farmers may increase sowing activities in coming weeks under moong and urad.
- **Stock of chana with Nafed has decreased considerably under free distribution scheme** through PMGKY during last 5 months and It may restrict release in coming weeks to support market at current level. Out of total stock of 28 lakh MT available in April-2020, around 60 to 70 % has been consumed now. So pace of release by Nafed is likely to be slow. Market sources say that Nafed has around 10 Lakh MT stock now while new crop is expected only in Feb-2021.So recovery is expected in cash chana market now if Nafed restricts sale. Demand is normal right now. However, it may decline after Diwali. Pressure may build up after Diwali again. Chana may trade in the range of Rs5150-5500 in Nov-2020.
- **Demand for tur and tur dal is poor despite low prices. Changing import timeline and rules** continue to affect market sentiments. Arrival from the new crop is expected from mid- Jan-2021.There is a report of crop damage in Karnataka and MH. However, higher area coverage would compensate the loss to a certain extent. In other states, crop conditions are good. Under prevailing condition 38 to 39 lakh MT crop is expected. Millers have restricted buying while Nafed started accepting bids near Rs - 6400-6500 in Karnataka and MH. If Nafed continues to accept bids at Rs 6400-6500 or below this price, tur may extend its loss by Rs 200-300 in coming weeks. Import volume is bound to increase in Nov – Dec, likely to be 1.25 and 1.5 lakh MT respectively .So weak sentiments prevail.
- **Lentils cash market traded lower and pressure is likely to continue to masur market in** coming weeks. Extended timeline for import till 31st Dec-2020 now would ease supply side as import flow at reduced duty would continue and volume may increase to 9 lakh MT during ongoing MY. Masur is being traded at Rs 5200-5300 in Mumbai market while it is quoted at Rs 5400 in Kanpur market. Masur area may increase this year by 5 %.farmers have covered 3.70 lakh ha against normal of 14.25 lakh ha so far. Sideways movement may be seen in masur cash market.
- **As expected last week, urad prices moved up by Rs 200 on tight supply side. Import volume** remained restricted while stockists are holding stock for higher prices. Demand has improved slightly while Nafed too is releasing old stock but slowly. It remains supportive for urad market this week.Urad stocks, imported or desi, with mills and markets are said to be lower than normal expectation at this point of time. Even farmers have restricted selling sensing strong inner tone. Import licenses for 1.5 lakh Mt has been issued but importers are unwilling to import at higher prices from Myanmar. Stocks of urad gota is almost zero. Stocks of small grain urad are dominating the market and are quoted at higher than usual.
- **Moong cash markets continued to trade steady at lower demand on higher prices. Demand** at higher level got stuck and millers have restricted buying at current level. Fear of lower yield remains supportive

for moong cash market. Yield is said to be lower by 5 to 7 % from last year due to heavy rains during flowering and maturity stages. As prices are ruling higher, rabi area is expected to increase by 10 % this year. Steady sentiment may prevail this week too. As prices are ruling at higher level, import may take place as there is parity now. Expecting a delay in arrivals from Rajasthan, stockists are preferring to retain their old stocks for a couple of weeks. so overall trend seems steady this week too.

- **Peas import remains halted as the DGFT has not allowed an additional import beyond 1.5 lakh Mt for the ongoing season.** Stock at ports is low while arrival too in domestic markets are decreasing. New crop is still 3- 4 months away, so steady tone may prevail. Demand is weak at higher level. Consumers preferred to shift to other pulses

Global Market:

- **Chickpeas harvesting in US is over now.** Weather conditions remained dry and favorable throughout the harvesting season. in most growing areas, suggesting this year's grades in the United States will be at the upper end of their historic range of average yield. By this time last year, the harvest was only 78% complete, while on average another 2% of the crop was left in fields. All field peas and lentils are now in the bin.
- **Global chickpeas market traded slightly up taking cue from a tight supply side and demand situation** on physical markets. However, supply side seems ample in the longer term as higher production is expected in Turkey and India this year. The biggest change can be seen in desi chickpea output. Harvesting is on in Australia. The last production estimates were released in September, at which time the crop was pegged at a record 1.18 million metric tons (MT) of desi and 58,500 MT of kabuli chickpeas.
- **Global field peas market traded slightly up on the back of higher buying by exporters** for meeting sales commitments. Whole green and yellow peas prices are increasing in Canada and USA too as they paid farmers higher prices. Maximum stock in Canada has been sold out by farmers. It leads to higher prices of peas.
- **Field pea markets traded firm last week taking clue from good opening season export movement.** As per Canadian Grain Commission, exporters in Canada loaded 630,900 metric tons (MT) of peas for bulk export in September, up from 102,400 in August and 508,900 the same month last year.
- **For 2020-21, the area seeded under chickpeas in Canada fell by 23.89% from 159 thousand ha in 2019-20 to 121 thousand ha** due to the lower farm gate prices received in the previous year. Saskatchewan accounts for most of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 200 Kt, down 20.63% from the previous year.
- **Dry peas production in Canada is expected to increase by 3% to 4.4 million tonne due to higher yield in 2020-21.** The major producing states like Alberta and Saskatchewan may contribute 4.1 MMT.
- **Lentils production in Canada is expected to increase by 29% to 3.1 MMT in 2020-21** due to higher yield and coverage area. Out of total large green lentils may contribute 0.7 MMT while the share of red lentils may be 2.1 MMT, followed by other types at 0.3 MMT.
- **Lentils production in Australia is expected to decrease by 6.89% from 5.34 to 4.97 lakh tons in 2020-21.** It is due to lower coverage (6.11%) of area from last year. Victoria and South Australia are major producing regions that contribute 92% of total production.

Monthly Outlook: -Pulses are likely to trade mixed in Nov-2020.

*AW estimates

Kharif Pulses:

Urad:

MY 2020-21 started with 2.37 lakh MT carry in stock while production is up by 4.88 lakh MT to 24.27 lakh MT this year. It would increase supply to 30.14 lakh MT including imports. Supply side is hence expected to remain slightly tight. Crop condition is normal to good except some pockets of Maharashtra, Madhya Pradesh and Gujarat, so far. Rabi sowing has just started.

Moong:

The new season started with 2.10 lakh MT carry in while production is up by around 2.39 lakh MT to 21.45 lakh MT this year. Despite higher production total supply would increase slightly to 25.20 lakh MT due to lower carry in stock. So the prices should remain on the higher side in 2020.

Tur:

Production of Tur is likely to increase from 37.19 to 38.15 lakh MT this year due to higher area coverage and good crop condition so far. Total supply would increase to 51.21 lakh MT this year. Supply side seems similar in the ongoing season as in the last year.

Chana (Chickpeas /Bengal Gram):

Market Recap:

Chana cash market is likely to recover once again as stocks with NAFED decreased to 65 to 70 % now. Free distribution of chana during last five months under PMGKY has eased burden of chana with NAFED to a

manageable extent. Nafed continued to accept bids near Rs5100-5300 and may restrict selling now to support domestic market. New crop is expected to hit market only in February-2021. So, Agriwatch expects recovery of Rs 200-300 from current level. At this level stockists may release stocks sensing that demand may decrease after Diwali. Sowing is on and area is expected to increase by 5 to 7 % this year to over 115 lakh ha. Weather condition is good so far and a good production prospects seems on the sight now. New crop is 3-4 months away and there is no import parity due to high duty (60%). At Rs 5200-5250, millers can buy it again. Overall inner tone seems firm for Nov. Nafed selling strategy would be main price driving force in Nov –Dec.

All India average price of chana increased by 4.92 % to 5382 in Oct-2020 against Rs 5133 in Sep. However, Australian chana increased by 1.46 % to Rs5391 per qtl in Mumbai market. As there is good demand for dal, prices of chana is expected to improve. Slight downward trend is expected when demand for Diwali decreases. Following graph illustrates chana price movement in different markets:

Price Dynamics: Prices are likely to trade firm in mixed in Nov due to:

- Decreasing stocks with Nafed and restricted sale in the second fortnight in Nov
- Likely weak demand after Diwali

- Likely 5 to 7 % higher area coverage this year due to higher prevailing price
- Limited import volume & restricted sales by private stockists
- Weak international market due to new Australian crop
- Favorable weather condition for sowing in domestic market

Seasonality Index: hints mixed movement for spot market in Nov-2020.

Internationally, Chickpeas traded weak as the new Australian crop started hitting the market with higher volume from mid of Oct. Even new arrivals from Canada and The US have started now. Production in Russia is expected to increase this year by 5 to 7 %. However, production in Argentina may decrease by 50%. Production in Australia may have increased considerably from 2.81 lakh MT to 11.07 lakh MT this year. However, maximum chana is of desi type which may not compete with North American and Russian crops.

For 2020-21, the area under chickpeas in Canada fell by 26.28 % from 156 thousand ha in 2019-20 to 115 thousand ha due to the lower farm gate prices received in the previous year. Saskatchewan accounts for most of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 239 Kt, down 5.15 % from the previous year, due to lower seeded area despite higher expected yields. Supply is forecast to rise to 539Kt. Exports are forecast to rise from 105 to 125Kt and carry-out stocks are forecast to rise from 250 to 330Kt in 2020-21. The average price is forecast to fall marginally due to a larger world supply, with the expectation of an average grade distribution. It may hover in the range of \$460 to \$500 per tonne.

Chickpeas projected area in the US is likely to be similar as last year at 305000 acres. Small chickpea acreage shows a decline of only 20% from last year, while large chickpea acreage is expected to decrease by 43% .It is really a big surprise this year. New crop has started coming into market now.

India is unlikely to import more than 3.5 lakh MT given the ample domestic availability.

Chana Future Market Analysis:

--

Technical Commentary:

- Increasing price & OI hint market to trade firm in the medium term.
- RSI is moving up in neutral region, hints caution to bulls.
- Prices closed above 9 and 18 days EMAs

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Despite negligible availability of field peas at ports, prices of yellow and green peas declined in October as consumers turned to other cheaper availability of pulses. Stockists who have stocks of peas, are now willing to sell it sensing weak demand and new arrival from Jan-2121 in domestic markets. Import is not taking place and the govt. is not in favor of allowing import above 1.5 lakh MT. As prices are lower in global market, Bangladesh and Nepal are buying more matar hoping for an arbitrage opportunity in selling to India. Demand is weak as other pulses are available comparatively at cheaper price. Matar in Kanpur market is being traded at Rs6400-6450 per qtl. At port it is being quoted at Rs 6200.

Despite weak demand for peas and daal, prices are expected to trade steady as supply side is tight right now. Govt. is not in favor of additional import despite higher prevailing price in domestic market. As prices are higher, area may increase this year by 5 to 10 percent. Sowing starts from mid Oct. As of now farmers have covered 2.86 lakh ha against season's normal of 8.78 lakh ha. Following chart shows price movement in various markets:

At the global level, Canada is exporting higher volume of peas as current buyers like EU, Pak, Sri Lanka and Bangladesh have increased buying, taking advantage of lower prices in the global market. Bangladesh and Nepal may buy higher quantity in Nov too due to lower prices in the global market and sell it in India as there is still good arbitrage opportunity for them.

Field pea markets traded weak last month taking clue from higher arrival despite good opening season export movement. As per Canadian Grain Commission, exporters in Canada loaded 630,900 metric tons

(MT) of peas for bulk export in September, up from 102,400 in August and 508,900 the same month last year. Oct data is awaited. However, volume is expected to increase.

Price Dynamics:

Pea market is expected to trade sideways in Nov due to:-

- Weak demand in domestic markets
- Availability of other pulses at cheaper price
- Likely increase in area & favorable weather condition for sowing
- New crop expected from January-2021 and
- Weak international market

Spread With Chana:

Gap has decreased from Rs 1306 to Rs 903 in last one month, based on monthly average of the price. Spread is expected to remain at negative zone in Nov too on relative movement in Chana prices.

Market Outlook For Nov: Sideways movement is expected in November-2020.

Masoor (Lentils):

Masur market traded slightly weak during the review month, due to slashed import duty from 30 to 10 % and extended import time line from 31st Oct- to 31 Dec, 2020 now. Demand for daal is weak too. Around 2.77 lakh MT was imported in Aug and Sep-2020 at the lower duty and around 2.5 to 3 lakh MT is expected in Oct, Nov and Dec. So supply side would be at comfortable level in these months too. It would not allow market to move up despite it being a lean season. Import volume would be higher in Sep-Oct too, so prices are unlikely to move up beyond a certain level (Rs5100-5400). Stock at ports is said to be around 2.5 lakh MT. Despite the higher import, prices are not likely to decrease below Rs5000 as stockists are unwilling to sell it below 5000 even in producing centres. It may help retaining acreages. Farmers have covered 3.7 lakh ha so far. Higher MSP for masur from Rs4800 to Rs5100 for MY 2020-21 would encourage farmers to plant more this year.

At Mumbai ports importers are selling masur at Rs 5050-5300. As prices are ruling higher than MSP in domestic market, Nafed would sell its stocks until sowing gets over. Old stock with Nafed is around 21,000 MT. Supply side would be at comfortable level as import flow would continue till Dec-2020.

For 2020-21, Canadian lentil production rose by 36.70 % to 30.65 lakh MT, due to higher area coverage and good yield. It was 22.42 lakh MT in 2019-20. By province, Saskatchewan accounts for 90% of the lentil area, with the remainder seeded in Alberta and Manitoba. Exports are forecast to be lower at 2.4 MMT. Carry-out stocks are forecast to rise to nearly 0.475 MMT. The average price for all grades and types are forecast to rise from 2019-20, with higher prices from large green and red types. It may rule in the range of \$520-540 per metric tonne throughout the year. There is an expectation that import demand in the Indian subcontinent will continue to be similar or slighter higher in 2020-21. The data has been taken from the latest update from Agriculture & Agri food Canada.

Price Trend In Cash Market:

Price Dynamics:

In Oct-2020, average price in key market Kanpur was up by 2.57 % from Rs 5782 to Rs 5954 per qtl. MoM basis. Prices are likely to trade range bound in Oct -2020

Range bound movement is expected in Nov due to:

- *Eased supply side with higher import volume*
- *Extended import time line to 31st Dec-2020 at 10% import duty*
- *Availability of 21000 Mt masur with Nafed*
- *Area is likely to improve due to higher prevailing price and*
- *Weak demand form retail sector*

Outlook for Nov: Steady to slightly weak tone may prevail in Nov-2020.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Extended time line for import till 31st Dec-2020 and likely higher import volume in Oct, Nov and Dec amid normal crop condition in major growing region would not allow tur market to move up beyond a certain level. Right now it is being traded at Rs 6500 in Gulberga market and may move down to Rs 6200-6300 in coming weeks. Supply side would increase while Nafed continues to sell tur through auction accepting bids near Rs 6400-6500. New crop is hardly two months away and Nafed still has around 3.5 lakh MT tur stock. So, higher import and release by Nafed may cap tur cash market.

Old lemon tur too are being quoted at Rs 6300-6350 per qtl. Arrivals have decreased in major centers like Jalgaon, Akola and Amravati line. Local tur in Gulberga too moved down to Rs 6400-6500 and it may move down further by Rs 200 to 300 under prevailing market fundamentals. Crop condition is good so far. Indian farmers have covered 48.49 lakh ha against 45.88 lakh ha last year. As per Agriwatch estimate India may harvest 38.15 lakh Mt crop this year. Weather condition in next two months is very crucial for driving price up and down in Nov-2020.

Market Recap:

For easing supply side govt. extended timeline for import till 31st Dec-2020. It would ensure better import flow from Myanmar in Oct, Nov and Dec. As availability in Myanmar is low and new crop will be available there only in end Jan-2021, import volume may be 2 to 2.5 lakh Mt against quota of 4 lakh Mt approved for 2020-21. Myanmar is offering tur at \$810-20 per MT basis Indian ports. Apart from this import through G to G channel would continue from Tanzania and Mozambique. Stock of Tur in Myanmar is said to be around 1.25 to 1.50 lakh MT from 2019-20 crop while new crop is expected in Jan end-Feb 2021. Farmers have shifted 20% tur area to sesame this year. Indian importers have struck deal of 1,00,000 MT after issuance of import licenses..

Price Dynamics:

In Oct-2020, average price in Gulberga market was increased by 15.40% from 6694 to Rs 7725 per qtl. due to non-issuance of import license to millers and fresh demand from mills amid halted imports through private channels.

. Tur price in Nov is likely to trade down due to:

- Issuance of import licences
- Extended timeline for import till 31st Dec-2020
- New crop is two months away from now
- Release from central pool stock
- Lower quotes in Myanmar(\$710-20 per Mt)
- Favorable weather's condition in growing region.

Seasonality Index-depicts steady to slightly firm movement.

Market Outlook for Nov:

Fundamental remains un-supportive for Tur cash market in the near to medium term. Longer term outlook remains weak too under prevailing fundamentals like higher area coverage, import volume, extended import timeline and good crop condition so far.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Slight downward correction was seen in urad market during month under review as govt has allowed 1.5 lakh Mt urad import. As kharif arrivals are low and private buyers are active, any major dip is unlikely in urad cash market right now. Farmers too are restricting release of the crop sensing strong inner tone.. Apart from it, the news of some crop loss too helped market to push up by Rs 100-200 during Oct. DGFT has not allowed release of old stocks lying at ports as these stocks have been imported without proper documents or presenting wrong information about mills/ capacity. Quotes for FAQ urad stay steady at \$910 per MT while SQ moved up by \$50 to \$1120 per MT basis Indian port. Prices in domestic market moved down to Rs 7600-7700- for FAQ and Rs 8500-8700 for SQ at week end. If demand improves and new arrival is delayed, prices would increase against normal expectation. Arrival pressure from kharif crop is decreasing now. Demand at higher level may decrease. Farmers are engaged in preparing fields for rabi sowing. Sowing has already started in south Indian states.

Stock position of urad in Myanmar is said to be around 1.50 to 2 lakh MT. New crop is expected to hit market in mid-March-2021. By then Myanmar may export around 1.25 lakh MT under quota system before new crop hits the market and would consume 50,000 MT for domestic consumption. As India has allowed only 1.5 lakh Mt import, pressure on price in Myanmar might be seen. Under prevailing market fundamental market may trade steady to slightly weak in Nov.

Seasonality Index depicts sideways movement in Nov.

Price Dynamics:

In Oct, average prices in key markets including Mumbai/was up by 10.15 % percent to 7600. In Chennai it was 9.24 up to 7800. Prices may stay steady to slightly weak in Nov due to:

- Order issued for 1.5 lakh Mt import
- Release started from central pool
- Arrival is likely to increase from the late sown local crop
- Likely higher area coverage in rabi season
- Weak demand at higher level from retail market

Market Outlook for Nov : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Downward trend in moong cash market could not sustain as other pulses like chana, tur, urad and peas traded mixed in Oct. despite good pace of arrival in producing regions. Procurement of moong has started in states like Karnataka, Maharashtra and Rajasthan. As prices are higher in some regions, procurement pace remains slow so far. As rains have affected quality of moong, so price range is wider this year. It is being traded at Rs 5800-7600, depending on quality of the crop. If demand improves, slight recovery might be seen for a shorter time. There is a parity for import as moong price is ruling higher than Myanmar right now. Stockists are preferring to sell now as import possibility has increased now. So, overall trend seems weak in the medium term despite minor loss in Karnataka (3500 ha) and Telangana (750 ha) by flooding.

Rabi sowing has already started now and farmers have planted 0.11 thousand ha so far against normal of 9.86 lakh ha. farmers had planted 35.84 lakh ha in kharif season. Kharif arrival is on. As kharif production is lower than expected earlier, price would not decrease more from current level. Moong would continue to trade in the range of Rs 5800 to 7600 in Nov against MSP of Rs 7196 per qtl.

Price Dynamics:

Under normal conditions, Agriwatch expects 15.4 to 15.5 lakh MT kharif production as per preliminary estimates after discounting the flood and higher rains generated loss. As demand at higher level is weak, pressure on prices may continue. There is no export parity as domestic price is higher than Myanmar.

Price Trend:

Market is expected to trade sideways in Nov due to:

- Arrival in markets continues from kharif crop

- Market Outlook for Nov:** Steady to slightly weak movement is expected.

Annual Rate Of Inflation Based On Monthly WPI

Wholesale Price Index-Monthly

The chart displays the monthly Wholesale Price Index (WPI) for various commodities from September 2016 to September 2020. The Y-axis represents the WPI index, ranging from 50 to 300. The X-axis shows the months from Sep-16 to Sep-20. The chart includes six data series: ALL COMMODITIES (dark blue), FOOD GRAINS(CEREALS+PULSES) (green), Gram (Chana) (teal), FOOD ARTICLES (red), PULSES (purple), and Arhar (Tur) (orange). The ALL COMMODITIES index remains relatively stable around 125. The Gram (Chana) index shows a significant peak in late 2016, reaching nearly 275, before declining and stabilizing around 150. The PULSES index also shows a peak in late 2016, reaching around 225, and then fluctuates between 125 and 150. The FOOD GRAINS(CEREALS+PULSES) index shows a steady increase from 150 to around 175. The FOOD ARTICLES and Arhar (Tur) indices remain relatively stable around 125-150.
