- Canada
- US

Pulses Sector-Highlights

- ***With favorable weather conditions, rabi pulses sowing is running smoothly. Farmers have planted 116.56 lakh ha area so far against normal of 144.89 lakh ha as on 04th Dec-2020. Out of this, farmers have covered 82.18 lakh ha area under gram against normal of 92.77 lakh ha. , 13.11 lakh ha under lentils(normal 14.24 lakh ha),8.22 lakh ha under field pea (normal 8.78 lakh ha),3.39 lakh ha under urad(normal 8.93 lakh ha),0.88 lakh ha under moong(normal 9.86 lakh ha),3.26 lakh ha under other pulses(normal 4.14 lakh ha).Gram area is running ahead by 16 % from last year so far, field pea up by 15%, lentils up by 8 % ,other pulses up by 26%. However, urad and moong coverage is lower by 3&1 % respectively so far. Farmers may increase sowing activities in coming weeks under moong and urad.***
- ***Sources say that Nafed would sell chana from PSS rabi 2020 stock in all states, where it is available, at Rs 5100 or above in the remaining weeks of December-2020.Base price would be Rs 5100.It can offer 1.5 lakh MT chana in December. However, it has made clear that it reserves the right to revise it without prior notice. This decision would help market to recover once again. It may push up market by 150 to 200 from current level. Notably, chana market had declined by Rs400 to 450 in the first week of Dec due to bear's active sale in futures market. It would be interesting to see next strategy of Nafed in coming weeks. Area is up 14-15% from last year and crop condition is good so far. So any big jump is unlikely in chana cash market.AW initial production estimate is 110-111 lakh MT, given the normal weather condition.***
- ***Tur Crop condition is good so far. Arrival started increasing in Sholapur and it was recorded at 32-35 motors. It was traded at Rs 6000 to 6350 per qtl. It contains 15-16 % moisture level. Arrival from other region too is expected from the third week of Dec. No major loss of Tur crop has been reported from south India from recent rains and swift wind. Recent rains are said to be beneficial for the standing crops including tur in central and north India. There is good moisture level in the field and it may delay harvesting at least by 10 days in major tur producing districts. Import volume in Nov and Dec is expected to be around 125 to 150 thousand MT combined. As new crop is round the corner now, any spike in tur market is unlikely. There is an increasing possibility of downward trend and market may trade at Rs5500-5700 by end Dec, much lower than MSP of Rs6000.***
- ***Lentils prices continue to cool down with easing supply side from import and smooth sowing activities, supported by congenial weather condition in major producing states like Madhya Pradesh, Uttar Pradesh and Bihar. Agriwatch expects 13.50-14.00 lakh Mt production this year under normal weather condition. Major exporters like Australia and Canada are trying to sell as much as they can before duty revision from 10 to 30% from 1st Jan-2021.Pulses prices may be under pressure due to increasing rabi area and higher flow of import this year. Lentils price may decrease to Rs-4750-4800 by end Jan. New crop would hit market in Feb end. Overall tone is bearish.***
- ***Slight recovery was seen in urad cash market on fresh demand, fear of crop loss in AP and restricted sale by private trades. Crop is in maturity stages in Kurnool and Nellore districts and is likely to be harvested by end Dec. There is a chance of weather disturbance again and if rains occur, quality of urad may be affected. Stock is weak and the south Indian markets/Mills may depend on imported urad from Myanmar. Overall, sentiment seems firm at this point of time. FAQ urad is being traded at Rs 7150-***

7250 in Mumbai while Rs7300-7400 in Chennai. Burma is offering FAQ urad at \$ 835 and SQ at \$945 per MT basis Indian port.

- **Pressure on moong market continues despite decreasing arrivals and slower pace** of rabi sowing. Prices are ruling above MSP for best quality crop. Medium grade has slipped below MSP at major centers. Demand is weak and stockists are preferring to offload stock sensing weak south Indian demands. As there is a parity, millers in south India have struck around 25,000-30,000 MT deal for Nov and Dec. Even arrival from rabi crop is expected by Jan end. So any improvement in moong price is unlikely at this point of time. Moong in various market is being traded at Rs 6500-7000 while best quality is ruling above MSP. Overall tone is weak.
- **Peas import remains halted as the DGFT has not allowed an additional import beyond 1.5 lakh Mt** for the ongoing season. Stock at ports is low while arrival too in domestic markets has decreased to a negligible level. New crop is still one month away, so steady tone may prevail. Demand is weak at higher level. Consumers preferred to shift to other pulses as prices are higher.

Global Market:

- **For 2020-21, chickpeas production in Canada is likely to decrease by 5 % from last year to 239 Kt** as area seeded was 24% lower from 2019-20. Production of desi types is expected to be higher while Kabuli type would decrease slightly. Despite lower production size total supply would increase from 439 to 539Kt this year. Export may stay steady at 105Kt while average price for the year may be \$560 per MT.
- **Lentils production in Canada is expected to increase by 29 % to 3.06 MMT in 2020-21** due to higher yield and coverage area. Out of total production of red lentils would increase to 2.1Mt while large green lentils production may decrease to 0.7 MMT, followed by other types at 0.3 MMT. Export may increase slightly from 2861 to 2900 Kt. Average price for the year may rule at \$625 per MT.
- **Dry peas production in Canada is expected to increase by 2% to 4.36 million tonne due to higher yield** in 2020-21. The major producing states like Alberta and Saskatchewan may contribute 4.1 MMT. Out of total production yellow peas would contribute 3.5 MMT. Average price may rule near \$295 per MT.
- **Movement of field peas for Lithuania were up sharply from the previous month in September** as per data published by Eurostat. Shipment reached 18,207 metric tons (MT) in Sep against 8,086 MT in Aug-2020. This brings total to 102,288 during the calendar year till Sep, down 34% last year. Netherlands was top buyer, receiving 7,341 MT in the month. United Kingdom was the second most important buyer buying 5,099 MT, followed by Norway at 2,750 MT.
- **Global Chickpeas market traded almost flat last week. However desi chickpeas traded slightly weak** due to higher production in Australia. Harvesting activities are on in parts of Australia. Australian exporters are hoping that India may reduce import duties on chickpeas in an effort to reduce food prices to urban consumers. Export in Sep was recorded up at 27,310 MT, up from 19,812 MT Aug-2020. This boosted shipments so far during the marketing year to 310,730, down 4% last year. Bangladesh brought 11,243 MT and Pakistan taking 5,971 MT, followed by United Arab Emirates at 3,592 MT.
- **Global field peas market traded slightly up on the back of higher buying by exporters** for meeting sales commitments. Whole green and yellow peas prices are increasing in Canada and USA too as they paid farmers higher prices. Maximum stock in Canada has been sold out by farmers. It leads to higher prices of peas.

- **Chickpeas harvesting in US is over now. Weather conditions remained dry and favorable** throughout the harvesting season. in most growing areas, suggesting this year's grades in the United States will be at the upper end of their historic range of average yield. By this time last year, the harvest was only 78% complete, while on average another 2% of the crop was left in fields. All field peas and lentils are now in the bin.
- **Lentils production in Australia is expected to decrease by 6.89% from 5.34 to 4.97 lakh tons in 2020-21.** It is due to lower coverage (6.11%) of area from last year. Victoria and South Australia are major producing regions that contribute 92% of total production.

*AW estimates

Kharif Pulses:

Urad:

MY 2020-21 started with 2.37 lakh MT carry in stock while production is up by 4.88 lakh MT to 24.27 lakh MT this year. It would increase supply to 30.14 lakh MT including imports. Supply side is hence expected to remain slightly tight. Crop condition is normal to good except some pockets of Maharashtra, Madhya Pradesh and Gujarat, so far. Rabi sowing has just started.

Moong:

The new season started with 2.10 lakh MT carry in while production is up by around 2.39 lakh MT to 21.45 lakh MT this year. Despite higher production total supply would increase slightly to 25.20 lakh MT due to lower carry in stock. So the prices should remain on the higher side in 2020.

Tur:

Production of Tur is likely to increase from 37.19 to 38.15 lakh MT this year due to higher area coverage and good crop condition so far. Total supply would increase to 51.21 lakh MT this year. Supply side seems similar in the ongoing season as in the last year.

Chana (Chickpeas /Bengal Gram):

Market Recap:

After a sharp decline chana cash market is likely to recover slightly this month due to Nafed recent decision to sell 1.5 lakh MT chana at or above Rs5100 in all states, where stock is available, during Dec-2020. It has lent support to chana cash market. As sowing is running higher by 14-15 % this year so far, sowing season may end with 115-116 lakh ha area coverage this year. Out of this estimate around 90 lakh ha has already been covered. Sowing would continue till 15th of Jan-2021. So, bumper production prospects are visible right now under normal condition. Availability is higher in domestic market. New crop is 2-3 months away and there is no import parity due to high duty (60%). At Rs 4700-4750, millers can buy it again. Overall inner tone seems firm in the short term, medium term outlook is weak.

All India average price of chana decreased by 4.28 % to 5155 in Nov-2020 against Rs 5386 in Oct. Even Australian chana too decreased by 3.22 % to Rs5217 per qtl in Mumbai market. As there is normal demand for dal, prices of chana is unlikely to improve much from current level. Following graph illustrates chana price movement in different markets:

Price Dynamics: Prices are likely to trade steady to slightly firm in Dec due to:

- Decreasing stocks with Nafed and decision to sell at reserve price of Rs5100 and above in Dec
- Mills fresh buying interest at reduced price
- Arrival from new crop not before mid Feb
- Limited import volume & restricted sales by private trades
- Improvement in global market

Seasonality Index: hints firm movement for spot market in Dec-2020.

Internationally, Chickpeas traded firm as demand for new Australian crop from Pakistan and Bangladesh increased . However,gains restricted due to new arrivals from Canada and The US have. Production in Russia is expected to increase this year by 5 to 7 %. However, production in Argentina may decrease by 50%. Production in Australia may have increased considerably from 2.81 lakh MT to 11.07 lakh MT this year. However, maximum chana is of desi type which may not compete with North American and Russian crops.

For 2020-21, chickpeas production in Canada is likely to decrease by 5 % from last year to 239 Kt as area seeded was 24% lower from 2019-20.Production of desi types is expected to be higher while Kabuli type would decrease slightly.Despite lower production size total supply would increase from 439 to 539Kt this year. Export may stay steady at 105Kt while average price for the yea may be \$560 per MT.

India is unlikely to import more than 4.5 lakh MT given the ample domestic availability

Chana Future Market Analysis:

Technical Commentary:

- Decreasing price & OI hint market to trade weak in the medium term.
- RSI is moving down in neutral region, hints caution to bulls.
- Prices closed below 9 and 18 days EMAs

Strategy: Buy on dip

Supports & Resistances			S1	S2	PCP	R1	R2

Chana	NCDEX	Jan	Buy above	4600	4750	4800	4525

*Don't carry forward position for the next month

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Despite negligible availability of field peas at ports, prices of yellow and green peas declined in Nov as consumers turned to other cheaper availability of pulses and new arrival of peas with Chhilka. Stockists who have stocks of peas, are now selling it sensing weak demand and arrival pressure from mid-Jan-21 in domestic markets. Import is not taking place and the govt. is not in favor of allowing import above 1.5 lakh MT. As prices are lower in global market, Bangladesh and Nepal are buying more matar hoping for an arbitrage opportunity in selling to India. Demand is weak as other pulses are available comparatively at cheaper price. Matar in Kanpur market is being traded at Rs 6700-6800 per qtl. At port it is being quoted at Rs 6600-6700.

Despite weak demand for peas and daal, prices are expected to trade weak as supply side is likely to increase in span of time. Govt. is not in favor of additional import despite higher prevailing price in domestic market. As prices are higher, area may increase this year by 5 to 10 percent. Sowing started from mid Oct. As of now farmers have covered 8.22 lakh ha against season's normal of 8.78 lakh ha. Following chart shows price movement in various markets:

At the global level, Canada and Russia are exporting higher volume of peas as current buyers like EU, Pak, Sri-Lanka and Bangladesh have increased buying, taking advantage of lower prices in the global market. Bangladesh and Nepal may buy higher quantity in Dec too due to lower prices in the global market and sell it in India as there is still good arbitrage opportunity for them.

Field pea markets traded weak last month taking clue from higher arrival despite good opening season export movement. As per Canadian Grain Commission, exporters in Canada loaded 630,900 metric tons (MT) of peas for bulk export in September, up from 102,400 in August and 508,900 the same month last year. It exported around 55,600 metric tons in Oct-2020.

Price Dynamics:

Pea market is expected to trade weak in Dec due to:-

- Weak demand in domestic markets
- Availability of other pulses at cheaper price
- Likely increase in area & favorable weather condition for sowing
- New crop expected from January-2021 and
- Weak international market

Spread With Chana:

Gap has increased from Rs 950 to Rs 1700 in last one month, based on monthly average of the price. Spread is expected to remain at negative zone in Dec too on relative movement in Chana prices.

Market Outlook For Dec: Weak movement is expected in Dec-2020.

Masoor (Lentils):

Masur market traded slightly weak during the review month, due to slashed import duty from 30 to 10 % and extended import time line from 31st Oct- to 31 Dec,2020 now. Demand for daal is weak too. Around 6.96 lakh MT was imported in from April and Oct-2020 and around 1.5 to 2 lakh MT is expected in Nov and Dec. So supply side would be at comfortable level in these months too. It would not allow market to move up despite it being a lean season. Import volume would be higher in Nov-Dec too, so prices are unlikely to move up beyond a certain level (Rs5100-5400). Stock at ports is said to be around 1.5 lakh MT. Despite the higher import, prices are not likely to decrease below Rs5000 as stockists are unwilling to sell it below 5000 even in producing centres. It may help retaining acreages. Farmers have covered 13.11 lakh ha so far. Higher MSP for masur from Rs4800 to Rs5100 for MY 2020-21 would encourage farmers to plant more this year.

At Mumbai ports importers are selling masur at Rs 5200-5300. As prices are ruling higher than MSP in domestic market, Nafed would sell its stocks until sowing gets over. Old stock with Nafed is around 21,000 MT. Supply side would be at comfortable level as import flow would continue till Dec-2020.

Lentils production in Canada is expected to increase by 29 % to 3.06 MMT in 2020-21 due to higher yield and coverage area. Out of total production of red lentils would increase to 2.1Mt while large green lentils production may decrease to 0.7 MMT, followed by other types at 0.3 MMT. Export may increase slightly from 2861 to 2900 Kt. Average price for the ear may rule at \$625 per MT. There is an expectation that import demand in the Indian subcontinent will continue to be similar or slighter higher in 2020-21. The data has been taken from the latest update from Agriculture & Agri food Canada.

Price Trend In Cash Market:

**Price Dynamics:**

In Nov-2020, average price in key market Kanpur was down by 2.76 % from Rs 5852 to Rs 5690 per qtl. MoM basis. Prices are likely to trade range bound to weak in Dec-2020

Range bound movement is expected in Dec due to:

- *Eased supply side with higher import volume*
- *Extended import time line to 31st Dec-2020 at 10% import duty*
- *Availability of 21000 Mt masur with Nafed*
- *Area is likely to improve due to higher prevailing price and*
- *Weak demand form retail sector*

Outlook for Dec: *Steady to slightly weak tone may prevail in Dec-2020.*

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):***Fundamental Analysis and Outlook:***

Extended time line for import till 31st Dec-2020 and likely higher import volume in Nov and Dec amid normal crop condition in major growing region would not allow tur market to move up beyond a certain level. New crop in Karnataka started now. Right now it is being traded at Rs 6000-6300 in Gulberga market and may move down to Rs 5600-5700 in coming weeks. Supply side would increase while Nafed continues to sell tur through auction accepting bids near Rs 6000-6100. Arrival from new crop has already been started. Nafed still has around 3.5 lakh MT tur stock. So, higher import and release by Nafed may pressurize market further.

Old lemon tur too are being quoted at Rs 5700-5750 per qtl. Arrivals have increased in major centers like Jalgaon, Akola and Amravati line. Local tur in Gulberga too moved down to Rs 6100-6300 and it may move down further by Rs 200 to 300 under prevailing market fundamentals. Crop condition is good so far. Indian farmers have covered 48.49 lakh ha against 45.88 lakh ha last year. As per Agriwatch estimate India may harvest 38.15 lakh Mt crop this year. Weather condition in next two months is very crucial for driving price up and down in Dec-2020.

Market Recap:

For easing supply side govt. extended timeline for import till 31st Dec-2020. It would ensure better import flow from Myanmar in Nov and Dec. As availability in Myanmar is low and new crop will be available there only in end Jan-2021, import volume may be 1.5 to 1.75 lakh Mt against quota of 4 lakh Mt approved for 2020-21. Myanmar is offering tur at \$700 per MT basis Indian ports. Apart from this import through G to G channel would continue from Tanzania and Mozambique. Stock of Tur in Myanmar is said to be around 1.0 to 1.10 lakh MT from 2019-20 crop while new crop is expected in Jan end-Feb 2021. Farmers have shifted 20% tur area to sesame this year. Indian importers have struck deal of 1,25,000 MT after issuance of import licenses.

Price Dynamics:

In Nov-2020, average price in Gulberga market was increased by 16.66% from 7725 to Rs 6438 per qtl. due to issuance of import license to millers and import flow amid new arrival in Sholapur(Karnataka) and selling by private trades.

. Tur price in Dec is likely to trade down due to:

- Issuance of import licenses
- Extended timeline for import till 31st Dec-2020
- Arrival from new crop
- Release from central pool stock
- Lower quotes in Myanmar(\$700 per Mt)
- Favorable weather's condition in growing region.

Seasonality Index-depicts steady to slightly weak movement.

Market Outlook for Dec:

Fundamental remains un-supportive for Tur cash market in the near to medium term. Longer term outlook remains weak too under prevailing fundamentals like higher area coverage, import volume, extended import timeline and good crop condition so far and new arrivals in Karnataka.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Slight downward correction was seen in urad market during month under review as govt has allowed 1.5 lakh Mt urad import. Demand got disrupted at higher level. So, urad market is coming down. It has decreased by 4.53 % to ₹542 in Nov against ₹7900 from Oct. Quotes for FAQ urad decreased to \$835 per MT while SQ moved down to \$965 per MT basis Indian port. Prices in domestic market moved down to ₹7200-7400- for FAQ and ₹8100-8300 for SQ. If demand improves and new arrival is delayed, prices would increase against normal expectation. Arrival pressure from kharif crop is decreasing now. Demand at higher level may decrease. Rabi sowing is on.

Stock position of urad in Myanmar is said to be around 1.00 to 1.10 lakh MT. New crop is expected to hit market in mid-March-2021. By then Myanmar may export around 1.0 lakh MT under quota system before new crop hits the market and would consume 25,000 MT for domestic consumption. As India has allowed only 1.5 lakh Mt import, pressure on price in Myanmar might be seen. Under prevailing market fundamental market may trade steady to slightly weak in Dec.

Seasonality Index depicts weak movement in Dec.

Price Dynamics:

In Nov, average prices in key markets including Mumbai/was down by 4.53 % percent to 7542. In Chennai it was 3 down to 7400. Prices may stay steady to slightly weak in Dec due to:

- Order issued for 1.5 lakh Mt import
- Release started from central pool
- Arrival is likely to increase from the late sown local crop
- Likely higher area coverage in rabi season
- Weak demand at higher level from retail market

Market Outlook for Dec : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Pressure continues on moong market with improved arrival from producing region. Farmers and traders are releasing stock sensing weak tone in the weeks ahead. Other pulses like chana, tur, urad and peas too are traded weak in Nov, so its impact too is visible on moong market. Procurement of moong has started in states like Karnataka, Maharashtra and Rajasthan. As prices are higher in some regions, procurement pace remains slow so far. As rains have affected quality of moong, so price range is wider this year. It is being

traded at Rs 5500-7500, depending on quality of the crop. If demand improves, slight recovery might be seen for a shorter time. There is a parity for import as moong price is ruling higher than Myanmar right now. Stockists are preferring to sell now as import possibility has increased now. So, overall trend seems weak in the medium term despite minor loss in Karnataka (3500 ha) and Telangana (750 ha) by flooding in Kharif season.

Rabi sowing has already started now and farmers have planted 0.88 thousand ha so far against normal of 9.86 lakh ha. Farmers had planted 35.84 lakh ha in kharif season. Kharif arrival is on. As kharif production is lower than expected earlier, price would not decrease more from current level. Moong would continue to trade in the range of Rs 5800 to 7600 in Nov against MSP of Rs 7196 per qtl.

Price Dynamics:

Under normal conditions, Agriwatch expects 15.4 to 15.5 lakh MT kharif production as per preliminary estimates after discounting the flood and higher rains generated loss. As demand at higher level is weak, pressure on prices may continue. There is no export parity as domestic price is higher than Myanmar. Rabi preliminary report is attached above in the report.

Price Trend:

Market is expected to trade weak in Dec due to:

- Arrival in markets continues from kharif crop
- Higher area coverage likely in rabi season and
- Availability of old stock in central pool and
- Normal demand

Market Outlook for Dec: Steady to slightly weak movement is expected.

Annual Rate Of Inflation Based On Monthly WPI
