- US

Pulses Sector-Highlights

- ***With favorable weather condition rabi pulses sowing is running smoothly. Farmers have planted 159.59 lakh ha area so far against normal of 152.66 lakh ha. Out of total farmers have covered 108.39 lakh ha area under gram against normal of 103.79 lakh ha. Farmers have covered 16.37 lakh ha under lentils(normal 15.86 lakh ha),10.51 lakh ha under field pea (normal 8.78 lakh ha),7.12 lakh ha under urad (normal 8.93 lakh ha),4.35 lakh ha under moong(normal 9.86 lakh ha),5.46 lakh ha under other pulses(normal 6.04 lakh ha).Gram area is running ahead by 4.43% from last year so far, field pea down by 1.68%, lentils up by 3.22 %, other pulses up by 16.15%. Moong coverage is up by 58.18 % so far. Farmers may increase sowing activities in coming weeks under moong and urad.***
- **Tur cash market with help of ongoing procurement drive despite increasing arrivals** in major markets of Karnataka, Maharashtra, Gujarat and Madhya Pradesh and higher import flow. Nafed has slowed down sale of tur.As crop is coming market is likely to trade stable to slightly firm. Private mills are active. All these factors may support cash market to some extent. Arrivals are likely to increase in Kurnool and Yammiganuar during the week under review. It was registered at 4254 bags in Kurnool and will continue to increase in other markets also.Crop condition in south Indian states is good despite some crop loss (around 5,000 ha) in AP due to recent storm and rains. Prices have slipped below MSP. and intervention through procurement activities is required to speed up.
- **Short supply of quality crop and low flow of import amid restricted arrivals from rabi** crop may support urad market to some extent in coming weeks. Mills are depending on imported volume and central pool stock.As impact of rabi arrival would be limited due to lower crop size, any major decline at all India level is unlikely. As there is a gap in supply-demand side, cash market may continue to trade sideways. Farmers have covered 7.12 lakh ha so far against 6.30 lakh ha last year. Farmers in AP have covered 2.67 lakh ha area against 2.42 lakh ha last year. It is higher by 13.02% in AP while it is up by 6.58% in Tamil Nadu.
- **Moong cash market traded stable with weak bias likely to continue in coming weeks.** Import flow & weak demand in recent weeks have pushed moong price down by Rs300-400 in south India. Prices in market like Gannavaram traded down at 7600-7700 during the week. In north and central India prices have decreased below MSP. However, quality crop is still ruling above MSP. Tone remains weak as supply from central pool is expected soon.Arrival from rabi crop is expected from end Feb-Mar.Overall tone remains weak.
- **Chana cash market is likely to trade under pressure and recent recovery seems temporary** as Nafed's unstable chana releasing strategy continues to affect market directly at a time when area is up by 5 % and the new crop is hardly one and a half month away. Nafed continued to fix reserve price and changed it frequently from Rs 5600 to Rs5100,again Rs5100 to Rs4875. Apart from it it has offered 5 to 10 % discount over previous MSP on particular centers. As offtake from central pool is lower, Nafed may decrease price further to vacate storage space for new procurement. It would not allow chana cash market to go up beyond a certain level. Delhi chana is being traded at Rs4550-4650. Demand is weak. Weather condition in Jan –Feb remains crucial. Overall sentiments seems weak.
- **Lentils prices continue to cool down with easing supply side from import and smooth sowing activities, supported by congenial weather condition in major producing states like Madhya Pradesh, Uttar Pradesh and Bihar.** Agriwatch expects 13.25-13.50 lakh Mt production this year under normal weather condition. Major exporters like Australia and Canada are trying to sell as much as they can before duty revision from 10 to 30% from 1st Jan-2021.Pulses prices may be under pressure due to

increasing rabi area and higher flow of import this year. Lentils price may decrease to Rs-4750-4800 by end Jan. New crop would hit market in Feb end. Overall tone is bearish. Current uptrend is unlikely to continue.

- **Peas import remains halted as the DGFT has not allowed an additional import beyond 1.5 lakh Mt for the ongoing season.** Stock at ports is low while arrival too in domestic markets has decreased to a negligible level. New crop is still one month away, so steady tone may prevail. Demand is weak at higher level. Consumers preferred to shift to other pulses as prices are higher.

Global Market:

Global Market:

- **Lentil markets traded mixed during the past week as markets switched to holiday mode.** Movement of lentils from origin to port locations in Canada have slowed considerably because of the loss of demand from India and stock accumulations in many destinations during the early fall shipping period. Markets continue to pay attention to rabi seeding planting progress in India. As of December 18 area had reached 1.531 million hectares of lentils, compared to 1.462 million at this time last year.
- **For 2020-21, chickpeas production in Canada is likely to decrease by 15 % from last year to 214 Kt** due to lower harvested area. Supply would be higher by 16% due to higher carryout. Production of desi types is expected to be higher while Kabuli type would decrease slightly. Despite lower production size total supply would increase from 439 to 539Kt this year. Export may stay steady at 105Kt while average price for the year may be \$560 per MT.
- **Lentils production in Canada is expected to increase by 29 % to 2.9 MMT in 2020-21** due to higher yield and coverage area. Out of total production of red lentils would increase to 2.1Mt while large green lentils production may decrease to 0.6 MMT, followed by other types at 0.2 MMT. Export may increase slightly from 2861 to 2900 Kt. Average price for the ear may rule at \$625 per MT.
- **Dry peas production in Canada is expected to increase by 8 % to 4.6 million tonne due to 10 % higher yield** in major growing states in 2020-21. The major producing states like Alberta and Saskatchewan may contribute 4.1 MMT. Out of total production yellow peas would contribute 3.5 MMT. Average price may rule near \$295 per MT. Canada may export 3.8 million MT in 2021.
- **Movement of field peas for Lithuania were up sharply from the previous month in October** as per data published by Eurostat. Shipment reached 18,207 metric tons (MT) in Sep against 8,086 MT in Sep-2020. This brings total to 102,288 during the calendar year till Oct, down 34% last year. Netherlands was top buyer, receiving 7,341 MT in the month. United Kingdom was the second most important buyer buying 5,099 MT, followed by Norway at 2,750 MT.
- **Global Chickpeas market traded almost flat last week. However desi chickpeas traded slightly weak** due to higher production in Australia. Harvesting activities are on in parts of Australia. Australian exporters are hoping that India may reduce import duties on chickpeas in an effort to reduce food prices to urban consumers. Export in Sep was recorded up at 27,310 MT, up from 19,812 MT Aug-2020. This boosted shipments so far during the marketing year to 310,730, down 4% last year. Bangladesh brought 11,243 MT and Pakistan taking 5,971 MT, followed by United Arab Emirates at 3,592 MT.
- **Global field peas market traded slightly up on the back of higher buying by exporters** for meeting sales commitments. Whole green and yellow peas prices are increasing in Canada and USA too as they

paid farmers higher prices. Maximum stock in Canada has been sold out by farmers. It leads to higher prices of peas.

- **Lentils production in Australia is expected to decrease by 6.89% from 5.34 to 4.97 lakh tons in 2020-21. It is due to lower coverage (6.11%) of area from last year. Victoria and South Australia are major producing regions that contribute 92% of total production.**

Weekly Outlook: -Pulses are likely to trade mixed in coming weeks.

Note (for chana and Masur crop year is 2020-21 and it will be marketed in MY is 2021-22)

Kharif Pulses:

Urad:

MY 2020-21 started with 2.37 lakh MT carry in stock while production is up by 4.89 lakh MT to 24.19 lakh MT this year. It would increase supply to 30.06 lakh MT including imports. Supply side is hence expected to remain slightly tight. Crop condition is normal to good except some pockets of Maharashtra, Madhya Pradesh and Gujarat, so far. Rabi sowing passed the half way mark.

Moong:

The new season started with 2.10 lakh MT carry in while production is up by around 2.36 lakh MT to 21.42 lakh MT this year. Despite higher production total supply would increase slightly to 25.17 lakh MT due to lower carry in stock. So the prices should remain on the higher side in 2021 too

Tur:

Production of Tur is likely to increase from 37.19 to 38.15 lakh MT this year due to higher area coverage and good crop condition so far. Total supply would increase to 51.21 lakh MT this year. Supply side seems similar in the ongoing season as in the last year.

Rabi Pulses:

Chana: Agriwatch has projected 110.63 lakh MT chana production in crop year 2020-21, to be marketed in 2021-22. As of now supply side is at comfortable level. Total supply would increase to 133.95 lakh MT. Carryout would increase to 23.95 lakh MT.

Masur: AW preliminary production estimate for masur is 13.49 lakh MT. As stock is ample with high carry in stock, prices would remain under pressure in new season starting from March-2021. Weather condition in Jan and Feb is still crucial.

Chana (Chickpeas /Bengal Gram):

Market Recap:

After a sharp decline chana cash market is likely to recover slightly this month due to Nafed recent decision to sell chana around 4875 barring some states, where stock is available, during Jan-2021. It may lend support to chana cash market. As sowing is running higher by 4.5 % this year so far, sowing season may end with 115-116 lakh ha area coverage this year. Out of this estimate around 108 lakh ha has already been covered. Sowing would continue till 15th of Jan-2021. So, bumper production prospects are visible right now under normal condition. Availability is higher in domestic market. New crop is one and a half month away and there is no import parity due to high duty (60%). At Rs 4600-4700, millers can buy it again. Overall inner tone seems firm in the short term, medium term outlook is weak.

All India average price of chana decreased by 4.0 % to 4750 in Dec-2020 against Rs 5210 in Nov. Even Australian chana too decreased by 1.25 % to Rs5150 per qtl in Mumbai market. As there is normal demand for dal, prices of chana are unlikely to improve much from current level. Following graph illustrates chana price movement in different markets:

Price Dynamics: Prices are likely to trade steady to slightly firm in Jan-2021 due to:

- Decreasing stocks with Nafed and decision to sell at reserve price of Rs4875 and above in jan
- Mills fresh buying interest at reduced price
- Arrival from new crop not before mid Feb
- Limited import volume & restricted sales by private trades
- Improvement in global market

Seasonality Index: hints slightly firm movement for spot market in Jan-2021.

Internationally, Chickpeas traded firm as demand for new Australian crop from Pakistan and Bangladesh increased . However,gains restricted due to new arrivals from Canada and The US have. Production in Russia is expected to increase this year by 5 to 7 %. However, production in Argentina may decrease by 50%. Production in Australia may have increased considerably from 2.81 lakh MT to 11.07 lakh MT this year. However, maximum chana is of desi type which may not compete with North American and Russian crops.

For 2020-21, chickpeas production in Canada is likely to decrease by 5 % from last year to 239 Kt as area seeded was 24% lower from 2019-20. Production of desi types is expected to be higher while Kabuli type would decrease slightly. Despite lower production size total supply would increase from 439 to 539Kt this year. Export may stay steady at 105Kt while average price for the yea may be \$560 per MT.

India is unlikely to import more than 4.5 lakh MT given the ample domestic availability

Chana Future Market Analysis:

Technical Commentary:

- Increasing price & OI hint market to trade firm in the medium term.
- RSI is moving up in neutral region, hints caution to bears.
- Prices closed below 9 and 18 days EMAs

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Despite negligible availability of field peas at ports, prices of yellow and green peas are stable despite new arrivals of green peas started in various markets. As arrival of green peas would increase in coming weeks, pressure on price might be seen. Arrival from new crop is expected to increase in Jan-2021, so stockists who have stocks of peas, are now selling it. Import is not taking place and the govt. is not in favor of allowing import above 1.5 lakh MT. As prices are lower in global market, Bangladesh and Nepal are buying more matar hoping for an arbitrage opportunity in selling to India. Demand is weak as other pulses are available comparatively at cheaper price. Matar in Kanpur market is being traded at Rs6500-6600 per qtl. At port it is being quoted at Rs 7500.

Despite improved demand for peas and daal, prices are expected to trade steady to slightly weak. Govt. is not in favor of additional import despite higher prevailing price in domestic market. As prices are higher, area may increase this year by 3 to 5 percent. Sowing starts from mid Oct. As of now farmers have covered 10.39 lakh ha against season's normal of 8.78 lakh ha. It is down by 1.8 % till date. Following chart shows price movement in various markets:

At the global level, Canada and Russia are exporting higher volume of peas as current buyers like EU, Pak, Sri- Lanka and Bangladesh have increased buying, taking advantage of lower prices in the global market. Bangladesh and Nepal may buy higher quantity in Dec too due to lower prices in the global market and sell it in India as there is still good arbitrage opportunity for them.

Field pea markets traded weak last month taking clue from higher arrival despite good opening season export movement. As per Canadian Grain Commission, exporters in Canada loaded 630,900 metric tons (MT) of peas for bulk export in September, up from 102,400 in August and 508,900 the same month last year. It exported around 55,600 metric tons in Oct-2020.

Price Dynamics:

Pea market is expected to trade weak in Jan due to:-

- improved demand in domestic markets
- Improved price for other pulses at higher price
- Likely increase in area & favorable weather condition for sowing
- New crop expected from January-2021 and
- Stable international market

Spread With Chana:

Gap has increased from Rs 950 to Rs 1700 in last one month, based on monthly average of the price. Spread is expected to remain at negative zone in Dec too on relative movement in Chana prices.

Market Outlook For Jan: Weak movement is expected in Jan end-2020.

Masoor (Lentils):

Slight recovery was seen in Masur market during the review week. But it is a temporary recovery as import flow is likely to continue till end Dec due to applicable duty of 10%. Demand for daal is weak too. Around 3.85 lakh MT was imported in Aug, Sep and Oct-2020 at the lower duty and around 2 to 2.25 lakh MT is expected in Nov and Dec. So supply side would be at comfortable level in these months too. It would not allow market to move up despite it being a lean season. Import volume would be higher in Nov-Dec too, so prices are unlikely to move up beyond a certain level (Rs4900-5300). Stock at ports is said to be around 1.25 lakh MT. Despite the higher import, prices are not likely to decrease below Rs4900 as stockists are unwilling to sell it below 4900 even in producing centres. It may help retaining acreages. Farmers have covered 15.31 lakh ha so far. Higher MSP for masur from Rs4800 to Rs5100 for MY 2020-21 has encouraged farmers to plant more this year.

At Mumbai ports importers are selling masur at Rs 5100-5150. As prices are ruling near MSP in domestic market, Nafed would not sell its stocks until price moves up again. Old stock with Nafed is around 21,000 MT. Supply side would be at comfortable level as import flow would continue till Dec-2020. In January, it may move up slightly and rule in the range of Rs 5000-5400.

Lentils production in Canada is expected to increase by 29 % to 3.06 MMT in 2020-21 due to higher yield and coverage area. Out of total production of red lentils would increase to 2.1 Mt while large green lentils production may decrease to 0.7 MMT, followed by other types at 0.3 MMT. Export may increase slightly from 2861 to 2900 Kt. Average price for the ear may rule at \$625 per MT. There is an expectation that import demand in the Indian subcontinent will continue to be similar or slightly higher in 2020-21. The data has been taken from the latest update from Agriculture & Agri food Canada.

Price Trend In Cash Market:

Price Dynamics:

In Dec-2020, average price in key market Kanpur was down by 2.76 % from Rs 5652 to Rs 5790 per qtl. MoM basis. Prices are likely to trade range bound to weak in Jan-2021

Range bound movement is expected in Jan due to:

- Eased supply side with higher import volume
- Extended import time line to 31st Dec-2020 at 10% import duty
- Availability of 21000 Mt masur with Nafed
- Area is likely to improve due to higher prevailing price and
- Weak demand form retail sector

Outlook for Jan: Steady to slightly weak tone may prevail in Jan-2021.

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Extended time line for import till 31st Dec-2020 and likely higher import volume in Nov and Dec amid normal crop condition in major growing region would not allow tur market to move up beyond a certain level. New crop in Karnataka started now. Right now it is being traded at Rs 6000-6300 in Gulberga market and may move down to Rs 5600-5700 in coming weeks. Supply side would increase while Nafed continues to sell tur through auction accepting bids near Rs 6000-6100. Arrival from new crop has already been started. Nafed still has around 3.5 lakh MT tur stock. So, higher import and release by Nafed may pressurize market further.

Old lemon tur too are being quoted at Rs 5700-5750 per qtl. Arrivals have increased in major centers like Jalgaon, Akola and Amravati line. Local tur in Gulberga too moved down to Rs 6100-6300 and it may move down further by Rs 200 to 300 under prevailing market fundamentals. Crop condition is good so far. Indian farmers have covered 48.49 lakh ha against 45.88 lakh ha last year. As per Agriwatch estimate India may harvest 38.15 lakh Mt crop this year. Weather condition in next two months is very crucial for driving price up and down in Jan-2021.

Market Recap:

For easing supply side govt. had extended timeline for import till 31st Dec-2020. It would ensure better import flow from Myanmar in Nov and Dec. Its impact would be felt in Jan-2021. As availability in Myanmar is low and new crop will be available there only in end Jan-2021, import volume may be 1.5 to 1.75 lakh Mt against quota of 4 lakh Mt approved for 2020-21. Myanmar is offering tur at \$700 per MT basis Indian ports. Apart from this import through G to G channel would continue from Tanzania and Mozambique. Stock of Tur in Myanmar is said to be around 1.0 to 1.10 lakh MT from 2019-20 crop while new crop is expected in Jan end-Feb 2021. Farmers have shifted 20% tur area to sesame this year. Indian importers have struck deal of 1,25,000 MT after issuance of import licenses.

Price Dynamics:

In Dec-2020, average price in Gulberga market decreased by 5.94% from 6438 to Rs 6055 per qtl. due to issuance of import license to millers and good import flow in Nov and likely in Dec-20 amid new arrival in Sholapur(Karnataka) and selling by private trades.

. Tur price in Jan is likely to trade down due to:

- Issuance of import licenses
- Good import flow
- Arrival from new crop
- Release from central pool stock
- Lower quotes in Myanmar(\$680 per Mt)
- Favorable weather's condition in growing region.

Seasonality Index-depicts steady to slightly weak movement.

Market Outlook for Jan:

Fundamental remains un-supportive for Tur cash market in the near to medium term. Procurement drive may support market if volume is increased at procurement centers. Longer term outlook remains weak too under prevailing fundamentals like higher yield realiz-21ation, import volume and good crop condition so far. Stake holders should wait for price coming down from current level.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Slight downward correction was seen in urad market during month under review as govt has allowed 1.5 lakh Mt urad import. Demand got disrupted at higher level. New arrival from rabi crop is likely to increase in A.P. So, urad market is coming down. It has decreased by 3.43 % to 7283 in Dec against 7542 from Nov. Quotes for FAQ urad decreased to \$820 per MT while SQ moved down to \$945 per MT basis Indian port. Prices in domestic market moved down to Rs 7200-7300- for FAQ and Rs 7700-7800 for SQ. If demand improves and new arrival is delayed, prices would increase against normal expectation. Arrival pressure from rabi crop too may increase by the end of this month. Demand at higher level may decrease. Rabi sowing has crossed 70 % of normal.

Stock position of urad in Myanmar is said to be around 50,000 MT. New crop is expected to hit market in mid-March-2021. By then Myanmar may export around 1.0 lakh MT under quota system before new crop hits the market and would consume 25,000 MT for domestic consumption. As India has allowed only 1.5 lakh Mt import, pressure on price in Myanmar might be seen. Under prevailing market fundamental market may trade steady to slightly weak in Jan.

Seasonality Index depicts weak movement in Jan.

Price Dynamics:

In Dec, average prices in key markets including Mumbai/was down by 3.53 % percent to 7238. In Chennai it was 3 down to 7200. Prices may stay steady to slightly weak in Jan due to:

- New arrival from rabi crop
- Higher area coverage and good crop condition
- Release started from central pool
- Weak demand at higher level from retail market

Market Outlook for Jan : Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Pressure continues on moong market with improved area coverage in producing region. Farmers and traders are releasing stock sensing weak tone in the weeks ahead. Other pulses like chana, tur, urad and peas too are traded weak in Dec, so its impact too is visible on moong market. Procurement of moong has started in states like Karnataka, Maharashtra and Rajasthan. As prices are higher in some regions, procurement pace remains slow so far. As rains have affected quality of moong, so price range is wider this

year. It is being traded at Rs 6000-7500, depending on quality of the crop. If demand improves, slight recovery might be seen for a shorter time. There is a parity for import as moong price is ruling higher than Myanmar right now. Stockists are preferring to sell now as import possibility has increased now. So, overall trend seems weak in the medium term despite minor loss in Karnataka (3500 ha) and Telangana (750 ha) by flooding in Kharif season.

Rabi sowing has already started now and farmers have planted 4.35 thousand ha so far against normal of 9.86 lakh ha. Farmers had planted 35.84 lakh ha in kharif season. Kharif arrival is on. As kharif production is lower than expected earlier, price would not decrease more from current level. Moong would continue to trade in the range of Rs 5800 to 7600 in Jan against MSP of Rs 7196 per qtl.

Price Dynamics:

Under normal conditions, Agriwatch expects 14.90 to 14.95 lakh MT kharif production as per preliminary estimates after discounting the flood and higher rains generated loss. As demand at higher level is weak, pressure on prices may continue. There is no export parity as domestic price is higher than Myanmar. Rabi preliminary report is attached above in the report.

Price Trend:

Market is expected to trade weak in Jan due to:

- Arrival in markets continues from kharif crop
- Higher area coverage likely in rabi season and
- Availability of old stock in central pool and
- Good crop condition in rabi season.

Market Outlook for Jan: Steady to slightly weak movement is expected.

Annual Rate Of Inflation Based On Monthly WPI

Month	All Commodities	Primary Articles	Food Articles	Pulses	Gram	Arhar	Moong	Masur	Urad	Gram Powder (Besan)
Sep-20	1.0	3.7	-0.7	2.5	6.8	3.0	-3.5	0.5	-2.0	3.0
Oct-20	0.7	1.4	-0.3	3.7	5.6	4.7	-0.7	2.3	2.1	7.7
Nov-20	0.4	-0.7	0.4	1.7	0.4	0.4	1.6	2.1	3.5	0.1

Wholesale Price Index-Monthly

The chart displays the monthly Wholesale Price Index (WPI) for various commodities from November 2016 to November 2020. The Y-axis represents the WPI index, ranging from 50 to 300. The X-axis shows the months from Nov-16 to Nov-20. The commodities tracked are:

- ALL COMMODITIES (Blue line)
- FOOD GRAINS (CEREALS+PULSES) (Green line)
- Gram (Chana) (Teal line)
- Moong (Light blue line)
- FOOD ARTICLES (Red line)
- PULSES (Purple line)
- Arhar (Tur) (Orange line)
- Masur (Pink line)

The index for most commodities shows a significant decline from late 2016 to early 2017, followed by a period of relative stability with minor fluctuations. A notable peak is seen for Gram (Chana) in late 2016, and a general upward trend is visible for many commodities starting in late 2019 and early 2020.
