- Indian Pulses- Wise Import- Monthly Analysis
- Price Trend (Seasonality)
- Indicative Pulses & Processed Pulses Prices (Domestic; Imported; Cnf) & Arrivals
- India
- Australia
- Canada
- US

Pulses Sector-Highlights

- **As per the latest update by IMD, the monsoon may hit Kerala on 1st June-2021.** The official monsoon forecast will be published on 15th May-2021. This year the monsoon rainfall would be normal. It may be 98% of the long-term average with the possibility of 5% minus –plus. It is an initial forecast. An official forecast is awaited. Rainfall forecast may be published on 31st May-2021.
- **The Ministry of Agriculture & Farmers Welfare has decided to distribute 20,27,318 seed mini-kits** under a special strategy for the ensuing Kharif 2021 season, costing Rs 82.01 crores. It is almost 10times higher than last year. The purpose is to encourage pulses production & productivity of Tur, Moong & Urad. For Arhar (Tur), 13,51,710 mini-kits would be provided. It would be a high yield variety, having productivity of over 15 QTL per ha for inter-cropping. For moong 4,73,295 mini kits would be distributed, having a productivity of 10 QTL. per ha in the inter-cropping farming. For Urad, 1,08,508 mini-kits would be provided, having above 10 QTL. per ha productivity for solo crop.
- **Harvesting of the summer moong has started getting momentum and the quality of the grains** is very good. However, arrivals in markets are unlikely to increase due to the ongoing lockdown. Most markets remained closed and farmers are unable to bring their produce in markets. Stocks of the new moong will continue to accumulate in the farmer's storage. Once the markets reopen, the pressure may build up on price. The harvesting would continue till mid-June. The area under the summer moong is higher by 65% this year to 11 lakh ha. So, the prices are expected to come down amid the ongoing weak demand. Mills have restricted buying as offtake at the current price is sluggish. Moong may slip by Rs 300 to 400 from the prevailing price. The stakeholders should buy on their immediate demand. Moong may slip below MSP, once the trade returns to a normal level and the market resume normal functioning.
- **Chana traded weak in futures as well as in the physical markets due to the disruptions** in normal trading activities, caused by extended timing of the ongoing lockdown in many states. There is a fear in the market that govt. may impose a complete lockdown if the corona epidemic continues to surge. As the prices are ruling above MSP, Nafed would not be able to buy much against the set target of 32,673,25 MT. Chana may continue to trade steady to slightly weak in the coming weeks. Under prevailing conditions, any improvement is unlikely before June-July when the festive season begins. Normally, the consumption of chana, chana daal, and gram flour increases from July. Right now chana is being traded at Rs 5500-5550 per QTL. The longer duration of the lockdown (likely) may cap uptrend in May.
- **The harvesting of the new Tur is on in the state like Uttar Pradesh.** However, farmers are unable to bring their produce to the markets due to the ongoing lockdown. The current demand for daal is weak and the market may trade in a range. Once the demand improves, tur may trade up as the major portion of stocks are now with strong hands. Nafed has a limited quantity of stock while the new procured quantity is below 11,000MT. Import might be delayed and is not expected before the end –July. By then demand would improve. The forecast of good rainfall, the higher prevailing price may encourage farmers to grow more tur this year. As Tur crop would be ready in Nov-Dec, prices may continue to get support at the current level. Tur is being traded at Rs 6800-6900 in the Gulbarga market and may move to Rs7500-7600 again.

- **Urad cash market decreased by 1.45% to Rs7391 during the week under review. The ongoing lockdown and disruption in interstate movements amid slow buying by mills continue to pressurize the cash market in producing region. Import volume is low despite the allocated import quota of 4 lakh MT. The DGFT has put the import allocation on hold until the court clears the ongoing issues raised by some millers and trades. So, the Import from the new quota would not take place before June, while new local crop would not be available before August-September. So, the cash market may move up once normalcy in market returns. Myanmar offers FAQ & SQ at \$800 & 865 per MT for May & June delivery.**
- **The firm trend could not sustain in the Masur cash market. The ongoing lockdown, weak demand from mills and the offer by importers at lower price (\$800 per MT (INR 6000-6100) at ports have pressurized the Masur price to some extent. Farmers too may opt to sell once normalcy returns into the market. However, the sowing of Lentil is due in July in Canada. Apart from this, the US dollar is getting stronger. It would force importers to spend more INR in the coming weeks in the medium term. So, weakness is unlikely to continue. Nafed Under the emerging scenario, NAFED has started procuring Masur at market price. It may remain supportive to the Masur cash market in the medium term, if govt. goes with the same duty structure.**

Global Market:

- **The seeded area under dry peas is expected to be slightly higher at 1750 thousand ha in 2021-20 against 1722 thousand ha last year in Canada. However, yield may decline from 2.73 to 2.57 t/ha this year due to average yield expectation owing to the expected unconducive weather conditions. So, the production is forecast to decrease from 4594 to 4400 thousand tonnes this year. Total supply and the export figure too may decrease from 4927 to 4790 and 3800 to 3700 thousand tonnes respectively. However domestic use may increase from 827 to 840 thousand tonnes this year. The carryout to decrease from 300 to 250 thousand tonnes. Under the prevailing market conditions average year price may hinge in the range of \$330 per metric tonne against \$340 last year. The demand is weak right now.**
- **Lentils production in Canada is expected to decrease from 28.68 in 2020-21 to 2.7 MMT in 2021-22 due to slightly lower area & yield. Export too are expected to decrease by 2 lakh MT to 25 lakh MT in 2021-22. Total supply is expected to decrease from 31.82 to 29.25 lakh MT due to likely lower production in 2021-22. Against it domestic usage. However, domestic use would decrease from 3.27 to 2.75 lakh MT in 2021-22. So carryout stock would stay at same as last year at 1.5 MT. Average yearly price is expected to be in the range of \$ 585 per MT. For 2002-21 it is \$ 600 per MT.**
- **The seeded area under Chickpeas is expected to be slightly lower at 100 thousand ha this year in Canada against 121 thousand ha last year. The yield too may decline from 1.79 to 1.75 t/ha this year. The production of Chickpeas may decrease from 214 to 170 thousand tonne in 2021-22. However, the total supply and export may increase slightly from 507 to 520 and 115 to 125 thousand tonnes respectively this year due to low domestic use. The carryout would increase slightly from 305 to 310 thousand tonnes this year. The yearly average price is expected to rule at \$545 per tonne against \$610 last year.**
- **US chickpea production is estimated by USDA to fall below 0.3 Mt, down over 50% from 2018-19, largely due to lower area. For 2020-21, the area seeded is forecast to fall from 2019-20 because of expectations for lower returns relative to other pulse crops. As a result, production is expected to decrease sharply to 200 kt. Supply is expected to decrease only marginally from last year as the lower**

production is partly offset by large carry-in stocks. Exports are forecast to be higher than the previous year and carry-out stocks are expected to fall but remain burdensome.

- **Chickpeas production in Australia is expected to increase from 2.81 to 7.55 lakh Mt in 2020-21.** Even field peas production would increase from 2.19 to 2.94 lakh MT-n 2020-21. Even lentils production may increase from 5.34 to 6.34 lakh Mt in 2020-21.
- **Lentils production in US for 2020 has been pegged at 336,201 MT based on 514,000 acres.** Lentil production is up by 40% from last year with a USDA production estimate of 7.41 million cwt. Planted acreage was up 9% from 2019 with 528,000 acres in 2020, and harvested acreage was up even more, 21% at 514,000 acres.

Monthly Outlook: -Pulses are likely to trade steady to slightly firm except Moong and Masur in May.

*AW estimates

Note (for chana and Masur crop year is 2020-21 and it will be marketed in FY 2021-22)

Kharif Pulses:

Urad:

MY 2020-21 started with 2.37 lakh MT carry in stock while production is up by 4.89 lakh MT to 24.19 lakh MT this year. It would increase supply to 30.06 lakh MT including imports. Supply side is hence expected to remain slightly tight. The total usage may decrease from 29.72 to 28 lakh MT.

Moong:

The new season started with 2.10 lakh MT carry in while production is up by around 2.36 lakh MT to 21.42 lakh MT this year. Despite higher production total supply would increase slightly to 25.17 lakh MT due to lower carry in stock. So the prices should remain on the higher side in 2021 too.

Tur:

Production of Tur is likely to increase from 37.19 to 37.28 lakh MT this year due to lower yield despite higher area coverage. Total supply would decrease from 49.56 to 48.14 lakh MT this year. Supply side seems contracting in the ongoing season in comparison to last year.

Rabi Pulses: Chana: Agriwatch has revised Chana production down from 110.63 lakh MT to 97.67 lakh MT for crop year 2020-21, to be marketed in 2021-22. Supply side would decrease from 128.32 to 121.99 this year. Carryout would decrease from 21.32 lakh MT to 18.49 lakh MT this year. It may keep price well supported throughout the year.

Masur: AW has revised its lentils production down from 13.49 lakh MT to 11.73 lakh MT. As new crop is expected to hit market from May, price should soften, but unlikely to come near MSP. Carryout would decrease from 7.32 to 5.50 lakh MT. Lower carryout stock may encourage import this year too.

Area & Yield Estimates For Kharif Tur, Urad & Moong-2020-21:

Chana (Chickpeas /Bengal Gram):
Market Recap:

Cash chana market traded up in April by 8.27 % from Rs 5039 to 5456 in comparison to March-2021. Australian chana too traded up by 10.23 % to 6224 per qtl. The ongoing lockdown has disrupted all trading activities amid the weak demand. The prices are likely to recover if the market returns (unlikely) to normalcy in May. The demand from hotel industries, railways and from retail sector is yet to improve. So the pressure seems on cash market right now. In some markets, chana is ruling below MSP or near MSP. Farmers have hold stocks as the most market remained closed. Govt. wants to procure over 2 MMT chana in 2021. Stockists and mills have restricted buying. The crop size is low and AW has revised its chana production estimate down by 15 lakh MT from 10.6 to 9.76 MMT. New season started with 21.32 MMT carry in stock. However, total availability would decrease from 128.32 to 121.99 lakh MT. It would keep price well supported. If demand improves, price may go up again as and when demand improves.

Import flow would remain restricted as duty plus cess is 60%. Import flow may continue from the least developed countries as they enjoys benefit of zero duty. Following graph illustrates chana price movement in different markets:

Price Dynamics: Prices are likely to trade sideways in May-2021 due to:

- The ongoing lockdown and weak demand despite the low crop size (97.67 lakh MT)
- Restricted buying by mills due to the uncertain market conditions.
- Availability of mango and low demand from bulk buyers like railways and hotel industries.
- The price may improve if market returns to normalcy.
- The import flow from the LDC and
- Over 1MMT old stock available with Nafed.

Seasonality Index: hints slightly weak movement for spot market for May-2021.

Chana Future Market Analysis:

Technical Commentary:

- Decreasing price & OI hint market to trade weak in the short to medium term.
- RSI is moving down in neutral region, hints caution to bulls.
- Prices closed below 9 and 18 days EMAs

Strategy: Sell on rise

Supports & Resistances			S1	S2	PCP	R1	R2

Monthly Trade Call*			Call	Entry	T1	T2	SL
Chana	NCDEX	Jun	Sell on rise	5485	5350	5300	5550

*Don't carry forward position for the next month

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Availability of imported stocks at ports are almost negligible and prices are ruling higher. The availability of chana at low price is capping peas price too despite the arrival from local markets is decreasing. In Kanpur market peas is ruling at Rs 5100--5200 while green peas is hovering at Rs 7000-7200. As prices of pulses in domestic market is ruling higher than normal expectation, govt. may allow 1.5 lakh MT import quota for this financial year, starting from April-2021 soon. As of now no decision has been made. As prices of other pulses is going up, pea too can recover after downward correction.

Despite stable demand for peas and daal, prices are expected to trade steady to slightly weak. Consumers have shifted from pea daal to other cheaper options. So, the govt.'s move is very crucial from pea price point of view. Following chart shows price movement in various markets:

Price Dynamics:

Pea market is expected to trade steady to sideways in May due to:-

- The closure of markets & weak demand
- Availability of mango at cheaper price
- Arrivals from local crop &
- The weak international market and good production prospects.

Spread With Chana:

Gap has increased from Rs 125 to Rs 250 in April over March-2021, based on monthly average of the price. Spread is expected to remain in positive zone in May on relative movement in the Chana prices.

Market Outlook For May: Steady to slightly weak movement is expected in May-2021.

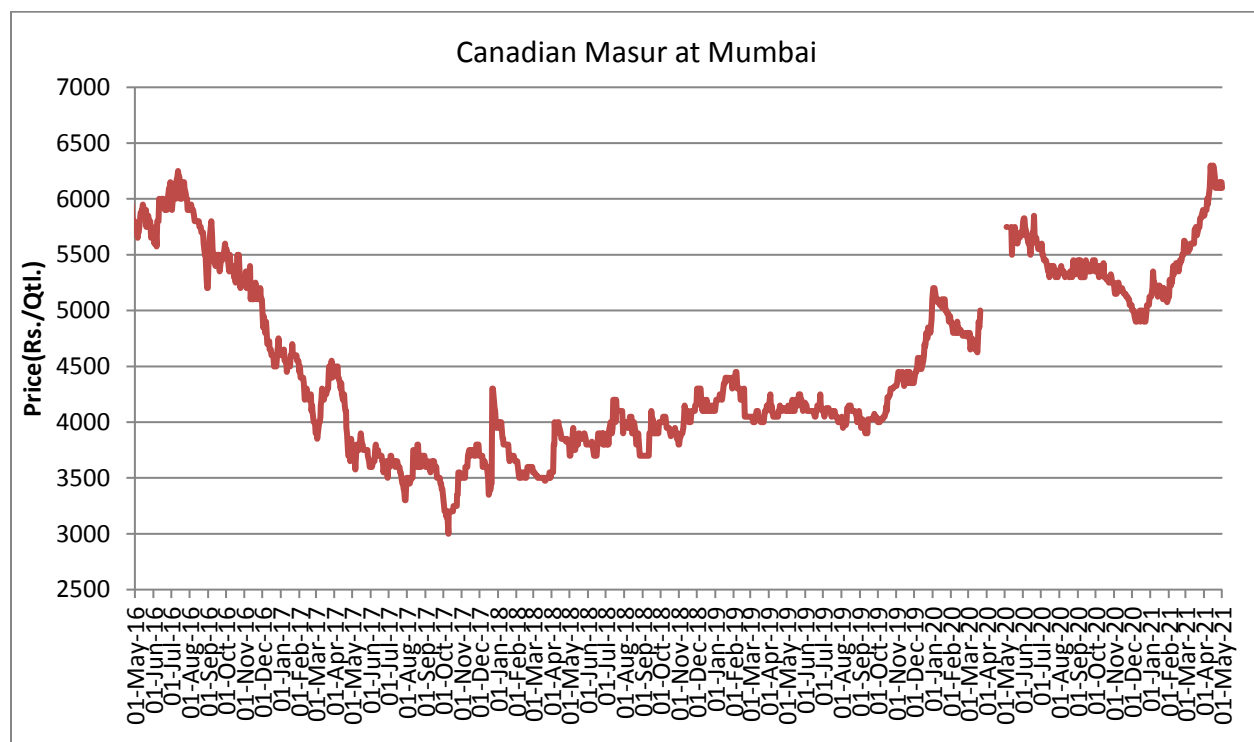

Masoor (Lentils):

- Masur cash market continues to trade up taking the clue from low global stock.** The new crop is six months away. The sowing of Lentil is due in July in Canada. Apart from it dollar is getting stronger. It would force importers to spend more INR in the coming weeks. Under the emerging scenario, even the importers are not ready to sell Masur at the prevailing price. Arrivals in domestic markets like Sagar, Ganjvasoda, Mungawali, Bhopal, and Beenaganj line have decreased. Even NAFED has started procuring Masur at market price. The procured quantity remains unspecified. All these developments can keep Masur's price well supported in the coming weeks despite some correction.

Agriwatch has revised its production estimates down from 13.49 to 11.73 lakh MT. Demand is expected to cool down and arrival too may increase in May, if the market returns to normal track.. So, any jump in lentils market is unlikely. However, price would not decrease to Rs5100 in any case. So Nafed, state procurement agency may start buying Masur at market price to build up its stock.

Lentils production in Canada is expected to decrease from 28.68 in 2020-21 to 2.7 MMT in 2021-22 due to slightly lower area & yield. Export too are expected to decrease by 2 lakh MT to 25 lakh MT in 2021-22. Total supply is expected to decrease from 31.77 to 29.25 lakh MT due to likely lower production in 2021-22.

Price Trend In Cash Market:

Price Dynamics:

In April-2021, average price in key market Kanpur was up by 11 % from Rs 5755 to Rs 6401 per qtl. MoM basis. Prices are likely to trade sideways in May-2021.

Sideways movement is expected in May due to:

- *The higher arrivals, if the lockdown is relaxed*
- *Weak demand*
- ***Outlook for May:*** *Sideways tone may prevail*

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):***Fundamental Analysis and Outlook:***

Tur cash market may move further up as pace of arrival is comparatively lower even in April while import is not possible before June. Private trades are active again. If the lockdown is relaxed, price may improve again. The cash market is ruling higher by Rs 1000 than MSP of Rs 6000. Even farmers are unwilling to sell at the prevailing price as they expect market to go up further. So, any downward correction is unlikely. Even import from overseas market would not exceed above 4 lakh MT due to low availability. Nafed would have to face difficulty to get bulk quantity at MSP this year. It may hardly procure 0.25 to 0.30 lakh MT this year. In brief, the overall outlook remains firm. Political unrest in Myanmar would continue to hamper cargo movement from Myanmar.

Market Recap:

Tur market traded weak due to weak demand for daal at current price. However, more downward correction is unlikely crop size is lower. Private trades have purchased around 15 to 20 % of crop this year while Nafed purchase is only 11,000 MT so far. Crop size is lower and experts have pegged it in the range of 34 to 37.00 lakh MT. Import flow is limited and cargo would remain disturbed from Myanmar due to political unrest there. Govt. has allocated 4 lakh MT quota for next financial year while 2.0 lakh MT import through G to G channel. However, the lower availability in Myanmar and the ongoing disturbance there, may restrict volume of import. Even in south African countries import may be in limited volume due to lower crop size there too. So, the uptrend may continue once demand for daal improves and the market is opened again.

Tur in Gulberga market traded at Rs 6800-7000 per qtl and may cross Rs 7500 soon. If yield loss is seen in U.P. crop too, prices may move further up.. Nafed too has less than 1 lakh MT old stock. It shows tight supply side in the second quarter of this calendar year.

Price Dynamics:

In April-2021, average price in Gulberga market increased by 1 % to Rs 6805 per qtl. due to improved offtake of daal from mills. However, with improved demand for daal, prices are bound to go up. Apart from it low availability in global market too has lent support.

. Tur price in May is likely to trade firm due to:

- *Lower crop size in Karnataka, Maharashtra*
- *Slower release by farmers/stockists/mills buying*
- *Lower availability in global market*
- *Higher quotes in Myanmar(\$7400 per Mt)*

Seasonality Index-*depicts steady to slightly firm tone.*

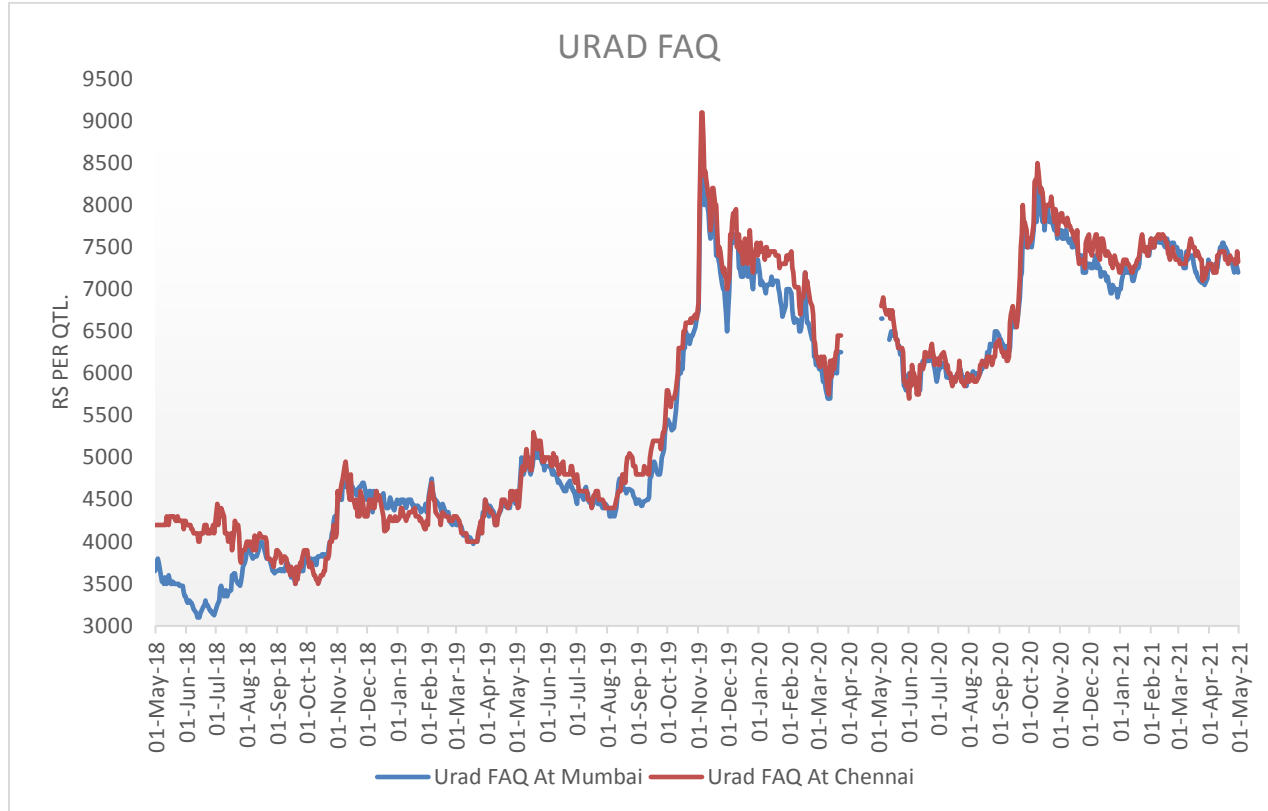

Market Outlook for May:

Fundamental remains supportive for Tur cash market in the near to medium term.

Urad (Black Matpe/Black Gram)**Fundamental Analysis and Outlook:****Market Recap:**

Short supply of urad in domestic market due to lower availability in domestic as well as in Myanmar market would not allow market to cool down until new kharif crop hits market in Aug-Sep-2021. Import flow too would be limited due to political unrest in Myanmar. Sensing the short supply govt has allocated 4 lakhMT import quota one month earlier for next financial year. The import allocation has been put on hold right now. Import would not take place before June. The new crop in Myanmar is almost ready but disturbance may disturb import cargo from there. It would take two month time to issue licenses after plant and capacity verification of the applicant.

Arrival from rabi crop has started drying now. The crop size too is small and so it would be consumed locally in Andhra Pradesh and Tamil Nadu. From other states, crop would hit market in April in limited quantity. So , any major decline in urad market is unlikely at this point of time .Major urad crop comes in kharif season. In Indian market urad is being traded at Rs 7400-7500. It may move up to Rs7700-8000, if demand improves in local market.

Seasonality Index depicts steady to firm movement in May-2021.

Price Dynamics:

In April-2021, average prices in key markets including Mumbai/was down by 0.85 % percent to 7300. In Chennai it was ruling at 7400. Prices may stay steady to slightly weak in May due to:

- The ongoing lockdown
- Weak demand
- Consumer shifting from other cheaper sources
- Forecast for good monsoon rains &
- Import possibility June onward.

Market Outlook for May: Prices are likely to trade steady to slightly weak .

Fundamental Analysis and Outlook For Moong:

Market Recap:

Moong cash market is likely to trade range bound as supply demand side is almost balanced. Pressure might be felt with new arrivals from the summer crop from Odisha now. Crop condition of moong is good in AP, Tamil Nadu, Orisha. Import flow would remain restricted as there is no parity at current level. Apart from its availability in Myanmar is weak this year. Prices in the market like Gannavaram traded down at 7400-7500 during the month. In north and central India, prices have decreased below MSP for low quality crop. Sideways movement is expected in March in Moong market. Arrival from rabi crop has started decreasing. In Jaipur market it is being traded at Rs 7200-7300.

Price Dynamics:

Pressure from the summer crop may be felt once the market opens up again.. Agriwatch expects 14.95 lakh MT kharif production as per revised estimates after discounting the flood and higher rains generated loss. Total production including Rabi is expected to move up by 2.39 lakh Mt to 21.45 lakh Mt this year. As demand is weak, moong cash market may trade steady to slight weak.

Price Trend:

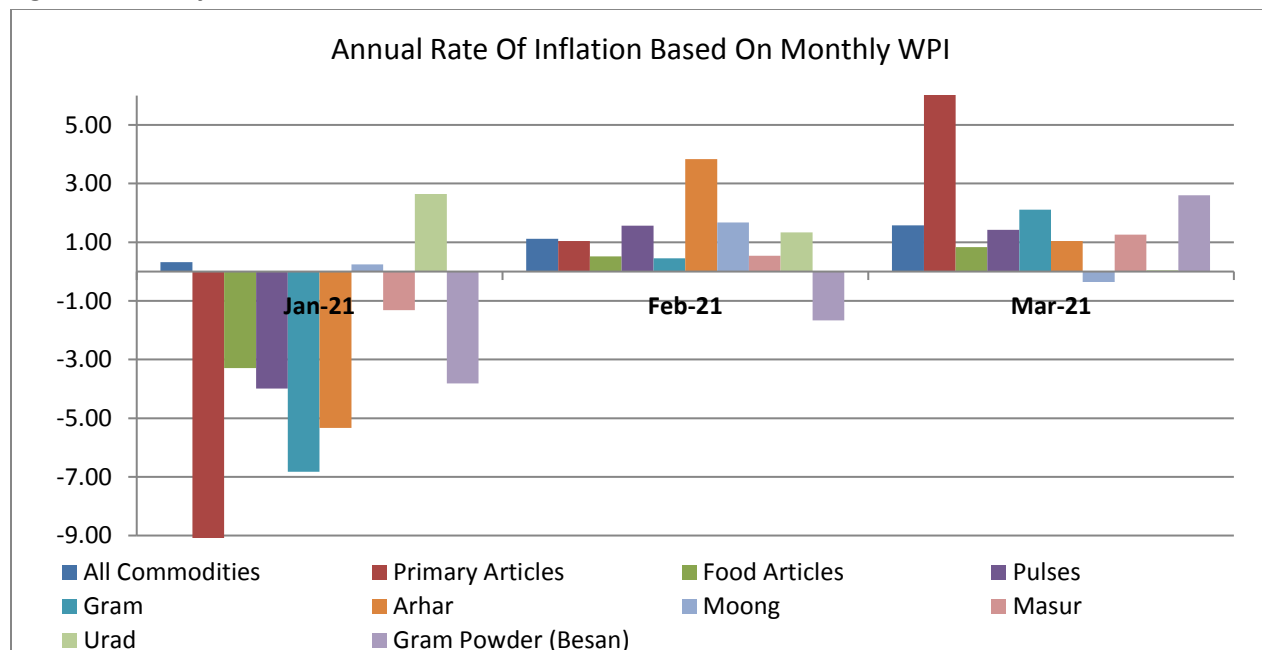

Market is expected to trade weak in May due to:

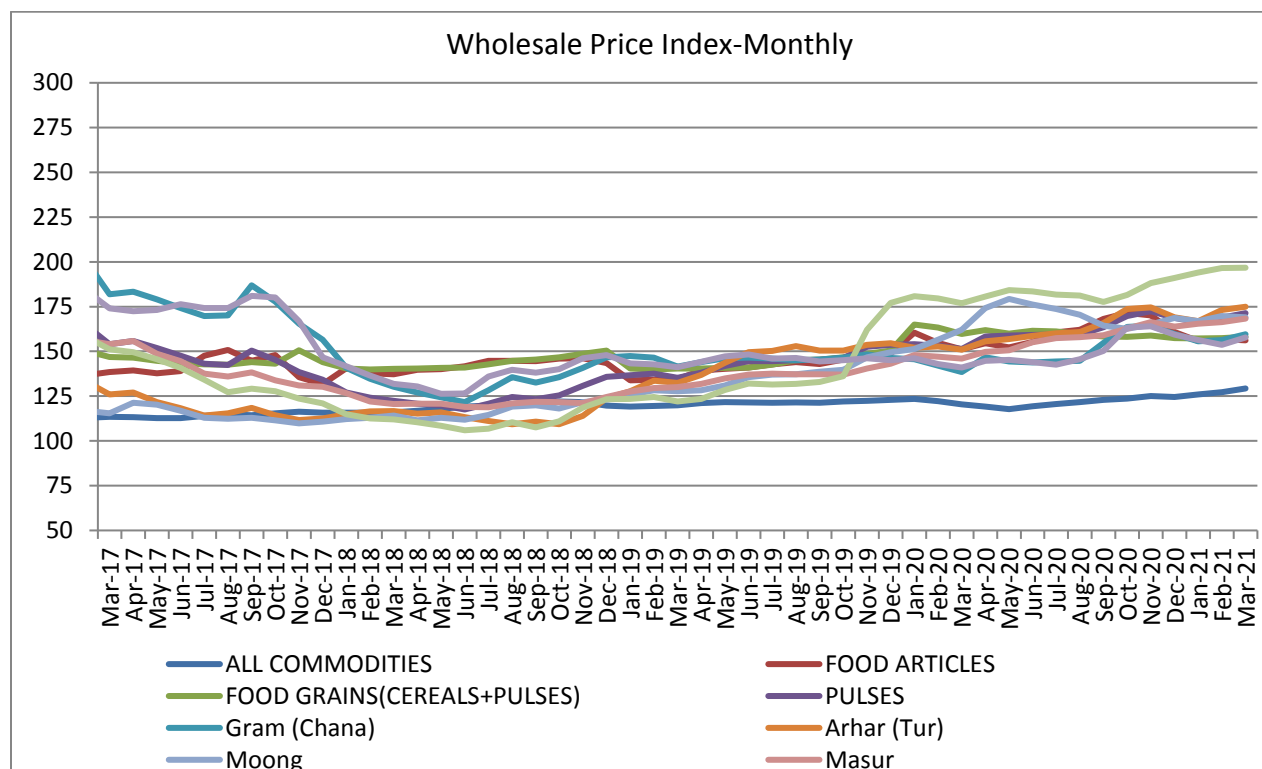

- Arrival in markets starts from summer crop
- Weak demand
- Availability of old stock in central pool and
- Good summer crop condition.

Market Outlook for May: Steady to slightly weak movement is expected.

Agri Commodity Indices Mar -2021:

Pulses WPI: Pulses WPI increased by 4.4 points from 168.9 in Feb to 173.3 in Mar-2021
