Pulses Sector-Highlights

All India Kharif pulses sown area is up by 2.05 % to 140.72 lakh ha against 137.89 lakh ha last year as on 17th Sep-2021. Arhar area is up by 3.82 % to 50.02 lakh ha so far while Moong lags by 0.37 % to 35.25 lakh ha. Urad bean area recovered slowly and is up by 2.02 % to 39.43 lakh ha against 38.65 lakh ha last year till date. Sowing is almost over now. Quotes for Canadian Masur decreased slightly by \$10 at \$1100-1105 and Australian quotes decreased by \$5 to \$1065-1070 per MT. Myanmar quotes for Urad, Tur & Moong declined slightly last week. Myanmar quoted Moong at \$860 to 900 per MT, Tur at \$855 and Urad FAQ & SQ at \$960 & \$1120 per MT. Urad, Moong & Tur quotes decreased by \$20 to 30 during the first week of October.

Tur is in vegetative to flowering stages in different states and arrivals will start in December and peak in January. There were heavy rains due to cyclone Gulab in Odisha, Andhra Pradesh, Telangana, Chhattisgarh, Maharashtra and Gujarat from 26th September to 30th September. Rainfall in Maharashtra still continues. Tur crop can withstand waterlogging for four to six days, so losses so far have been nominal at 2-3% in Maharashtra, Odisha as well as Gujarat. Further heavy rainfall is forecast for Maharashtra and some rainfall is also expected in Gujarat and Karnataka. In case of particularly heavy falls and waterlogging, the losses in tur crop may escalate. Tur crop now requires bright sunny weather for the setting of fruits and ripening stage. Prices of Tur has been stable during the week at 6400-6700 in various market. Range bound movement is expected this month.

As around 50% sowing delayed by 10 to 15 days in major Moong growing states due to erratic behavior of rains, yield expectation is lower in Maharashtra, Karnataka and Odisha and there is a quality issue in Rajasthan too. Rajasthan is the largest moong producing state accounting for approximately 60% of the Kharif acreage. Crop conditions were good in most of the state until before cyclone Gulab, but excess rains over the last week of September have raised some concerns about quality and the yield may also decline marginally. Yield losses to the extent of 2-3% from normal are also anticipated in Maharashtra, Karnataka and Odisha. Weather condition in Gujarat, South Indian states, Odisha, Bihar and West Bengal over the next 10 days remain crucial and excess rains may cause some further losses to yield. Myanmar is offering Moong (Anna Seva) at \$900, Pokako at \$1000 and Pedisheva at \$1000. The short to medium term outlook seems weak. Moong prices are ruling under pressure. Procurement may support price again and prices may touch MSP this month.

Urad harvesting was completed to a large extent in Maharashtra when heavy rainfall occurred during late September. The harvesting has progressed further, and is almost complete in the state by now. The harvesting is still ongoing in Madhya Pradesh, Rajasthan, Uttar Pradesh and Gujarat and has just started in Odisha and Jharkhand. Nominal losses in yield amounting to 2 to 5% are estimated so far in various states due to heavy rains after cyclone Gulab. However, the losses may increase if heavy rains continue. Heavy falls are predicted in states like Gujarat, Bihar, West Bengal, Sikkim, Tamil Nadu, Kerala and Karnataka over next few days. The impact going ahead may be severe in the states where the harvesting is not yet complete. The first fortnight of October remains very crucial for the yield and size of the Kharif crop. Prices ruled steady to slightly firm and may continue to rule firm. Myanmar is offering Urad at \$930 and \$1090 for FAQ & SQ variety, slightly up from the previous week. Range bound movement expected in Oct.

Lentils cash market traded slightly down by 0.20 % to 7410 in Mumbai market during the week under review. It decreased by 0.15 % to 7780 in Kanpur market. Demand for Masur dal got disrupted while importers at various ports are offering lentils at 7400-7450 against 7500-7550 during previous week. Two vessels having 30000-35000 MT are yet to be unloaded at ports. Arrivals of other Kharif pulses like Moong and Urad are expected to increase. As Tur & Chana dal are available at competitive prices, price sensitive consumers are shifting to a cheaper option. Apart from this, importers may release stock faster than before as there is a feeling of uncertainty among trade community over possible changes in policies. So lentil cash market may decrease by 100 more this week. Importers are active in Canada, Australia and enquiry from Russia too have been seen during last two weeks. The short term outlook seems weak.

Chana cash market continued to trade weak and decreased by Rs 100 to 5200-5350 in Delhi. Market may trade range bound this week and may increase slightly in coming weeks as demand is expected to improve now. Nafed has stock and its continuous release at regular interval would not allow cash Chana market to move beyond a certain level. Supply side is ample and the fresh demand for besan and dal is bound to increase. If consumers of Masur and Urad dal move towards Chana & Tur dal, prices should recover by 100 to 200. Festive demand may restart again and it may support Chana to some extent. In Jaipur market it traded at Rs 5100. The overall tone remains steady to slightly weak in the short term.

Global Market Updates:

According to ABARES (Australian Bureau of Agricultural and Resource Economics and Sciences), Chickpea production in Australia is estimated to be 8,44,000 tonnes in 2021-22 according to September update. Last year's production was 7,33,000 tonnes while June 2021-22 estimate was 7,33,000 tonnes. Lentil's production in Australia is projected to be 6,39,000 tonnes against last years production of 6,34,000 tonnes while June 2021-22 estimate was 5,89,000 tonnes.

According to September update, US lentil Production is estimated to be 0.57 LMT in 2021 against 3.36 LMT in 2020 which is 83% reduction and US Chickpea production is projected at 0.77 LMT in 2021 against 1.97 LMT in 2020 which is 60% reduction. The production is less due to drought condition prevailing in US.

According to Agriculture and Agri Food Canada (AAFC) August report, the production of lentil is projected at 18.85 lakh tonnes for 2021-22. July production estimate was 27.50 lakh tonnes while last year's production was 28.68 lakh tonnes. Huge decline in lentil production due to weather and drought. The end stock for season 2021- 22 is expected to be only 50,000 tonnes against 4 lakh tonnes last year. Market expects production of Canadian lentil not more than 15 lakh tonnes.

According Agriculture and Agri Food Canada (AAFC) August report, the production of Chickpea is projected at 0.87 lakh tonnes for 2021-22. July production estimate was 1.26 lakh tonnes while last year's production was 2.14 lakh tonnes. Decline in production is due to weather and drought.

In Manitoba grasshopper population thrive in some area due to hot and dry conditions. It is an additional threat to the pulses production along with heat wave condition. Due to prolonged record breaking heat

this summer has deteriorated crop growing conditions in Alberta. Alberta and Saskatchewan government doubled low yield appraisal threshold for farmers who salvage cereal/pulse crop as feed. Saskatchewan, Alberta and Manitoba are major lentil growing states in Canada.

The heat damage to crops is broader in Manitoba, Saskatchewan, Alberta. As middle of Jul U.S. Department of Agriculture rated subsoil moisture in the state as 80% short to very short. Lentil production in Canada may decrease by 50% from normal 24-25 LMT to 12-13 LMT this year. In Saskatchewan lentil crop condition was 18% good, 40% fair and 42% poor till last week. Crop is in pod filling stage and facing extreme moisture loss. The current quotes for lentil are at \$750. It may move up to \$800-850.

Australia's first crop production forecast for a current season for five major pulses including chickpeas, fieldpeas and lentils released by Pulse Australia (PA), it is 2.28 Mt which is 23% below the 2.96 Mt produced last year. Chickpea area is forecast to increase by 11% to 5.65 lakh ha with production estimate 6.62 LMT. Forecasted area for peas is 2.38 lakh ha with production estimate of 2.7 LMT while forecasted area for lentils is 3.04 lakh ha with production estimate of 4.54 LMT. Australia's production is down this year on dry conditions.

Global field peas market traded firm on increasing fear of low production in the North America. Most of the producing region is facing dry and hot conditions, resulting in deteriorating crop ratings and accelerating plant development in parts of the growing area. Grain size may be small and the yield low. Export movement has slowed down. Buyers are in a wait and watch mood.

Chickpeas market too traded up due to doubt over yields and quality in Canada and the US. However, desi chickpeas traded low due to poor demand from Pakistan and the Asian countries. It has affected chickpeas value in Australia too. India is not taking interest to buy Chana as prices have come down here below minimum support price.

Area planted for all chickpeas for the 2021 crop year is estimated at 341,000 acres, up 26% from the previous year, according to the USDA's annual seeded area report. Area harvested is forecast at 334,600 acres, 27% above 2020. Small chickpea area planted is estimated at 67,000 acres, up 38% from 2020. Area harvested for small chickpeas is forecast at 65,600 acres, a 37% increase from 2020. Area planted for large chickpeas in 2021 is estimated at 274,000 acres, a 24% increase from the previous year. Large chickpeas area harvested is forecast at 269,000 acres, a 25% increase from 2020.

The seeded area under dry peas is expected to be slightly higher at 1750 thousand ha in 2021-22 against 1722 thousand ha last year in Canada. However, yield may decline from 2.73 to 2.57 t/ha this year due to average yield expectation owing to the expected uncondusive weather conditions. So, the production is forecast to decrease from 4594 to 4400 thousand tonnes this year. Total supply and the export figure too may decrease from 4927 to 4790 and 3800 to 3700 thousand tonnes respectively. However domestic use may increase from 827 to 840 thousand tonnes this year. The carryout to decrease from 300 to 250 thousand tonnes.

Lentils production in Canada is expected to decrease from 28.68 in 2020-21 to 2.7 MMT in 2021-22 due to slightly lower area & yield. Export too are expected to decrease by 2 lakh MT to 25 lakh MT in 2021-22.

Total supply is expected to decrease from 31.82 to 29.25 lakh MT due to likely lower production in 2021-22. Against it domestic usage. However, domestic use would decrease from 3.27 to 2.75 lakh MT in 2021-22. So carryout stock would stay at same as last year at 1.5 MT. Average yearly price is expected to be in the range of \$ 585 per MT. For 2002-21 it is \$ 600 per MT. Outlook:

Monthly Outlook: -Pulses are likely to trade steady to slightly firm in Oct.

*AW estimates

Note (For Chana and Masur crop year is 2020-21 and it will be marketed in FY 2021-22)

Marketing year (Urad: Aug to July, Moong: July to June, Tur: Dec to Nov. Chana: March to Feb and Masur: March to Feb) AW kharif 2nd Adv. production estimate for Tur, Moong & Urad published.

Kharif Pulses:

Urad: Agriwatch has estimated 23.87 lakh MT Urad production in 2021-22 including 17.65 lakh MT in the ongoing Kharif season. Import volume would increase due to free import policy till Dec-2021 and the consignment would be allowed to hit Indian ports till Jan-. New crop has already started. Carryout would decrease slightly due to quality and yield loss in Kharif season.

Moong: AW has published its 2nd Adv. Kharif production estimate for 2021-22. Production has been pegged at 23.20 lakh MT including rabi. Kharif Moong production has been pegged at 15.75 lakh MT. Import may increase to 1.5 lakh MT. Import is free. If parity turns in favour of Indian importers, import may continue. As carryout is low, price may continue to rule at higher level, supported by the higher MSP. Procurement is likely to start from Nov. Carryout would slightly increase due to higher import flow.

Tur: AW has published its 2nd Adv. estimates for Tur for 2021-22 and expects it to increase to 40.69 lakh MT and the figure may move up as weather condition is favorable for the standing crop right now. Higher production would ensure better supply side next season. As availability would increase, any spike in Tur market is unlikely at this point of time.

Rabi Pulses:

Chana: Agriwatch has revised Chana production down from 110.63 lakh MT to 97.67 lakh MT for crop year 2020-21, to be marketed in 2021-22. Supply side would decrease from 128.32 to 121.99 this year. Carryout would decrease from 21.32 lakh MT to 18.49 lakh MT this year. It may keep price well supported throughout the year.

Masur: AW has revised its lentils production down from 13.49 lakh MT to 11.73 lakh MT. Prices are higher as import scenario is not very comfortable due to the low crop size in Canada. Low carryout and domestic production are keeping prices up. New crop in India comes in Feb end. So availability would be tight and the price firm. Sowing for Chana and Masur for the crop season 2021-22 would start from mid-Oct. As import flow may decline, carryout too would decrease to 5.70 lakh MT.

Chana (Chickpeas /Bengal Gram):

Market Recap:

Chana cash market continued to trade steady 5300-5400 in Delhi. Market may trade range bound this week and may increase slightly in coming weeks as demand is expected to improve now. Nafed has stock and its continuous release at regular interval would not allow cash Chana market to move beyond a certain level. Supply side is ample and the fresh demand for besan and dal is bound to increase. If consumers of Masur and Urad dal move towards Chana & Tur dal, prices should recover by 100 to 200. Festive demand may restart again and it may support Chana to some extent. In Jaipur market it traded at Rs 5100-5150. The overall tone remains steady to slightly weak in Oct.

Import flow would remain restricted as duty plus Cess is 60%. Import flow may continue from the least developed countries as they enjoy benefit of zero duty. Following graph illustrates Chana price movement in different markets:

Price Dynamics: Prices are likely to trade range bound in Oct-2021 due to:

- Sales by central Pool stock.
- Ample availability with private trades and Govt.

- More downside movement unlikely due to higher MSP(5230) and likely commencement of sowing from mid-Oct
- Demand is expected to improve due to festive season
- Change in import policy unlikely soon.

Seasonality Index: hints slightly range bound movement for spot market in Oct -2021.

Chana Future Market Analysis:

Technical Commentary:

- Decreasing price & OI hint market to trade weak. Short build up might be seen in the short term
- RSI is steady in neutral region, hints caution to bulls.
- Prices closed below 9 and 18 days EMAs
- **Note: No fresh position can be taken**

Strategy: Buy on dip

Area: Lakh Ha Source: Govt. of India (Sowing is over)

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Peas cash market traded almost flat despite ups-downs in Aug & Sep-2021. Average monthly price increased marginally in Sep to 5990 from 5982 in Aug. Actually, Chana prices could not move up against market expectation and it put a cap on peas market too despite restricted import. Peas market in Kanpur too traded range bound from 5700 to 6000. As it is a lean season and sowing is about to start some improvement might be seen in the cash market, if Chana starts moving up (unlikely). Govt. would not allow peas import and status quo is likely to be maintained. Consumers of Matar dal has shifted to Chana dal and demand for Besan is yet to improve. Following chart shows price movement in various markets:

Price Dynamics:

Pea market is expected to trade range bound in Oct due to:-

- Ample availability of Chana dal and consumer's shift from Matar to Chana dal
- Weak demand for Matar

Spread With Chana:

Spread between Chana and Peas, at Kanpur market continued to move in negative zone. The gap has decreased from minus 635 to minus 437 now. Spread is expected to remain in the negative zone in Oct too on relative movement in Chana prices. Peas may continue to move range bound in Oct-2021. Chana price is very crucial to lend support to peas cash market in Oct.

Market Outlook For Oct: Range bound movement is expected in Oct-2021.

Masur (Lentils):

Considering the low availability in domestic and global market Government has allowed imports from other countries like Russia and Black Sea region countries. Earlier India was not importing Lentils from Russia due to phytosanitary issues, but India received request from Embassy of the Russian Federation and Federal Service for Veterinary and Phytosanitary Surveillance (FSVPS) to allow export of lentil from Russia to India and the Government has allowed import for the very first time with a view to reduce dependence on Canada and Australia. Import is coming from Canada and Australia but at higher price. Private participants have

started avoiding new deals due to higher price. Lentil cash market traded weak by 0.13% in the last week from Rs. 7790 to Rs. 7780 per quintal at Kanpur. Prices of mill delivery Masur in Kanpur is at Rs. 7,750-7,800/ql. Imported Masoor at Mumbai is available at Rs. 7,450-7,500/ql. Prices are expected to remain weak in the coming week as demand for Masoor is low due to higher prices and availability of other pulses at cheaper rates. Stock at port is accumulated and is over 3 lakh MT while more than 1 lakh MT is in the way to India. It would cap lentils price in Oct.

Price Trend In Cash Market:

Note: Red colour shows Masur Canada:

Price Dynamics:

In Sep-2021, average price in key market Kanpur was up by 7.89 % to Rs 7805 per qtl. MoM basis. Prices are likely to trade range bound in Oct-2021.

Range bound is expected in Oct due to:

- Ample availability at ports
- Stock limit
- Attempt to source lentils from non-traditional market like Black Sea Region)
- Poor offtake at higher level

Outlook for Oct: Range bound movement might be seen

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Market Recap:

Tur is in vegetative to flowering stage in different states and arrivals will start in December and peak in January. Arrivals will start first in Karnataka state. So far 2-3% losses have been observed in Maharashtra, Odisha as well as Gujarat due to cyclone Gulab. Weather during October and November is crucial from the perspective of yield as Tur crop now requires bright sunny weather for the setting of fruits and ripening stage. Acreage under Tur was up this year from the starting of sowing season. Now all India acreage under Tur is up by 3.82%. Area has been increased significantly in key growing states of Karnataka and Maharashtra by 13.03% and 6.21% respectively. As on 17th September 2021, Tur area stands at 50.02 lakh ha which is 1.84 lakh ha more than previous year's 48.18 lakh ha. Prices of Tur has been stable during the week at 6400-6700 in various market. Range bound movement is expected this week. Import continues from Myanmar and Mozambique. Following chart shows the price movement:

Price Dynamics:

In Sep-2021, average price in Gulbarga market decreased by 0.13 % to Rs 6661. As import flow is increasing while crop condition is good so far. So, prices are likely to move range bound.

. Tur price in Oct is likely to range bound due to:

- New crop starts hitting market from mid Nov
- Import flow
- Steady demand

Seasonality Index-depicts steady to slightly firm tone.

Market Outlook for Oct:

Sight recovery is expected before the new crop hits the market from mid Nov.

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Harvesting of Urad has been almost completed in Maharashtra while it is still ongoing in Madhya Pradesh, Rajasthan, Uttar Pradesh and Gujarat and has just started in Odisha and Jharkhand. Losses in yield amounting to 2 to 5% are estimated so far in various states due to heavy rains after cyclone Gulab. Quality of new Urad coming in markets of Rajasthan and Madhya Pradesh is poor, and is fetching lower prices. Quality has deteriorated due to heavy rains during harvesting period. As per government's sowing data released on 17th Sep-2021, Indian farmers have planted 39.43 lakh ha against the season's normal of 37.96 lakh ha and 38.65 lakh ha last year. Delayed sowing in the beginning of the season, excess/deficient rains in the plant growth to maturity stages have neutralized the expectation of good yield/ crop size this year despite higher acreage. Due to rains generated loss and the low flow of import are keeping market well supported. Good quality Urad is ruling higher at 7900 in Chennai while imported at 7050 in Mumbai. More upside movement is unlikely as demand got struck. Quality Urad may move up.

Seasonality Index depicts steady to steady to slightly weak movement in Oct-2021.

Price Dynamics:

In Sep-2021, average prices in key markets including Mumbai/was down by 1.82 % to 6923. Prices may stay steady to slightly weak in Oct due to:

- New arrival and poor quality of crop in MP, Gujarat
- Expected sale from central pool stock
- Import flow from Myanmar

Market Outlook for Oct: Prices are likely to trade steady to slightly weak.

Fundamental Analysis and Outlook For Moong:

Market Recap:

Harvesting activities of Kharif Moong crop got delayed because of the heavy rains in Rajasthan, M.P., Maharashtra & Gujarat and arrivals of new crop also got disrupted. Impact of Cyclone Gulab is visible and 2 to 3 % crop has been lost in Maharashtra and Karnataka. Indian farmers have covered 35.25 lakh ha till 17th Sep 2021-down by 0.37% from 35.38 lakh ha same time previous year. The acreage has increased in major growing state, Rajasthan by 2.76% and in Karnataka by 5.52% as compared to previous year. Sowing has been delayed by 10 -15days in Rajasthan and by few days in Madhya Pradesh due to erratic behavior of monsoon while it was on schedule in other major growing states. Import flow would continue due to Moong being in the free import list till Dec-2021.Imports may continue to land at Indian ports till January 2022 as per the extended time frame for import. Myanmar is offering Moong Anna Shwewar at \$900 and Moong Pedi Shwewar and Pokako at \$1000 per MT. New crop in Myanmar has started hitting the local

markets there and the crop condition is average to good. Availability is expected to be good in India and Myanmar throughout the year, and it may cap any upsurge in the Moong prices. Moong is being traded at 6000 to 7000 in various markets, depending on quality and arrival flow.

Market is expected to trade steady to slightly weak in Oct due to:

- Increasing new arrivals
- Mills renewed interest in buying
- Good crop condition in Rajasthan
- Procurement date extended to Nov due to high moisture content in new Moong

Market Outlook for Oct: Steady to slightly weak movement is expected until procurement starts

Price Trend:

Agri Commodity Indices Aug -2021:

Pulses WPI: Pulses WPI increased by 1.7 points from 172.7 in Jul to 174.4 in Aug-2021
