**Pulses Sector-Highlights**

All India Rabi pulses sown area is up by 0.57 % to 29.88 lakh ha against 29.71 lakh ha last year as on 5th Nov-2021. Chana area is up by 2.30 to 20.94 lakh ha while Moong area was similar to last year at 0.08 lakh ha. Urad bean area is down by 21.63 % to 39.43 lakh ha against 0.63 lakh ha last year till date. Sowing has just started and is likely pick up by the end of this month. Lentil area is up by 1.58 to 2.57 lakh ha so far. Area under Masur and Urad may increase by 10 % while Chana area may decline by 8 to 9 % this year.

Tur crop condition in Maharashtra and Karnataka is excellent so far while it is normal to good in U.P., A.P., Telangana & Gujarat. In other states too crop condition is normal. Recent heavy rains in Maharashtra may affect crop under flowering stages. Production prospects are good, and the new crop may hit market in the fourth week of Nov. from Sholapur region, followed by Gulbarga region. As the harvesting/new arrivals are at hands, stockists too would start releasing old stock. With regular import and likely new arrivals may pressurize Tur cash market in coming weeks. After Diwali demand for dal normally decreases. So, Agriwatch sees a downward correction in the market. The prices of Tur may come down below MSP in Dec under normal weather condition. The overall tone remains weak. Lemon Tur quotes in Myanmar decreased by \$60 to \$790 per MT during last 15 days. It may move down to \$750 by Dec end. In Gulbarga market prices have decreased to 6400, down by 200 in last 15 days. However, rains intensity in Maharashtra and other growing states needs to be monitored.

Chana sowing activities are likely to increase from this week. Farmers may reduce their Chana area as they have preferred to increase area Masur, Urad and Mustard in major growing states, including Madhya Pradesh, U.P. and Rajasthan. Area under Chana may decrease by 7 to 10 % this year due to low price at this point of time. Cash market is stable right now and demand for besan and Dal is likely to increase as the temperature is decreasing day by day. Import from Tanzania is limited and is being sold at 4850-4900 in Mumbai. Chana of Sudan origin is available at 4900. Millers in central & North India are buying based on their needs. As supply side is at comfortable level with ample stock (around 8.5 lakh MT) in the central pool, Agriwatch don't see any spike in Nov. Availability in global market is good with projected production in Australia at 9 lakh MT and Myanmar at 9-10 Lakh MT. Prices of Chana in domestic market is ruling near 4800-5200 and may move slightly up in expectation of good demand for besan in the winter season.

Sowing of Masur is running smoothly in Madhya Pradesh, Bihar and Uttar Pradesh while it has just started in West Bengal. Area is likely to increase by 10% in M.P. and Bihar while in U.P. area may increase by 5 %. The high price during sowing time is encouraging farmers to increase area under Masur this year. Prices have softened slightly at ports and also in Kanpur. It is being traded at 7350 at Mumbai & 7600 in Kanpur. Prices have decreased by 200 in last 15 days. Demand is normal right now. Quotes in the overseas market are steady and may decrease as the Australian crop is almost ready now and the competition for attracting buyers between Canada and Australia is likely to increase now. Indian importers are buying in small quantity sensing Australian crop soon. Apart from it there is ample stock (over 3.5 lakh MT) at Indian ports and is sufficient to take care of 2 months demand. Agriwatch expects 1.5 lakh MT import from Australia. In Feb end domestic crop would be available. So, prices would continue to move range bound. Improvement in prices might be seen if demand improves.

Sowing of Rabi Urad in South India is yet to pick up. High moisture level in the field and recent rains have slowed sowing activities. It may increase from the next week. Area under rabi Urad may increase by 5 to 7 % this year as prices are high and the import volume low. Demand of Urad and Urad dal is not picking up. So prices are decreasing right now. Quotes in Myanmar have decreased to \$890 for FAQ & \$990 for SQ. Prices decreased by \$50-60 during last one week despite the low availability in Myanmar. New crop will be available in March while supply side would remain tight in domestic market. It would keep price well supported above MSP this year. FAQ Urad is being traded at 6750 in Mumbai market while in Chennai local crop is being traded at 6800. Prices may decrease by Rs 100 this week too as demand is poor. With improvement in demand prices may recover again by the end of this month.

Prices of Moong stayed steady in Jaipur market at 6800. Slight recovery might be seen as procurement is on and the govt may procure good quantity this year. As demand is low right now, prices are ruling below MSP in major markets where procurement is yet to start. Mills are not buying in bulk volume as demand for dal is weak. Supply side is at comfortable level and prices may continue to rule in the range of 6300-6900. Farmers would prefer to sell their produce to govt.'s agencies as it is ruling below MSP in various markets. Moong Chamki is being traded at 6800 in Jaipur market. Myanmar is offering Moong at \$930 to 1000 per MT, basis Indian ports. Steady to slightly weak trend may prevail in the cash Moong markets in coming weeks. Import flow is on and availability in Myanmar is higher. So any unexpected rise in the cash market is unlikely at this point of time. Rabi sowing is yet to pick up.

Global Market Updates:

The IGC is going to include Lentils, Chickpeas and Dry beans in the Council's definition of grains under Article 2(1) (e) of the grains Trade Convention. This means that now the IGC secretariat will expand its market information for Pulses. Actually, pulses trades are continuously increasing throughout the world and has expanded with good pace and reached at 16 to 17 million MT in last 5 years. Right now the IGC is providing updates on Pulses trade and production estimates in the Grain Market Report on a bimonthly basis. Apart from it S&D balances are published for major exporters for Pulses like Lentils, Dry Peas and Chickpeas. Now FoB prices matrix too would be included.

Global Lentils market continues to trade under pressure. Indian buying is limited while bumper crop in Australia has increased the pressure on Canadian Lentils. There is a gossip in the market that Indian importers had imported Lentils in May-June taking advantage of low duty and now they are selling it at cheaper price, asking prices for Canadian origin product. Pressure may continue as long as India remains out of the Canadian market. Lentils stock at Indian ports are said to be around 3.75 lakh MT. Apart from it local market has stock of 4 lakh MT. So, the available stock is sufficient to meet the requirement for four months. In March new local crop would be available. So, the urgency of buying at the higher cost has mitigated.

Lentils production in Canada is expected to decline by 37% to 1.8 MMT this year due to lower yield received in Western Canada due to drought like condition during flowering to maturity stages. Red Lentils production may decline to 1.3 MMT this year. The share of green Lentils may be 0.3 MMT out of

total production. Despite lower production total supply would decrease by 28% due to higher carrying stock. However, export too would decrease by 18% to 1.9 MMT in 2021-22. Average price for the year may hover in the range of \$1050 per MT.

Lentils production in the US is expected to decline by 31% to 0.23 Mt in 2021-22. Despite higher area coverage production would decrease due to the low yield realization and the higher abandonment. US may export 2 lakh MT Lentils in 2021-22. The major buyers are EU, Canada, India and Mexico.

Dry Peas production in Canada is expected to decline by 45% to 2.52 MMT in 2021-22 due to lower yield realized in the western Canada. The main growing states like Alberta and Saskatchewan. These two states would contribute 2.3 MMT. Canada had produced 4.59 MMT last year. Yield has decreased from 2.73 to 1.68 tonne per ha this year. As crop size is lower than last year by 45%, export are expected to decline to 2.3 MMT from 3.58 MMT last year. Total supply would decline from 4.91 to 3.09 MMT this year. It would drag prices up from \$340 to \$580 per Tonne. The projected price is the average for the year.

As per the latest release by Australia Bureau of Statistics, Lentils export from Australia posted a smart gain in August-2021 to 119440 MT, up by 93% exported in July-2021. Australia had exported 61892 MT in July-2021. So far Australia has exported total 796,239 MT in the ongoing season against 604,690 MT last year till August-2020. India emerged as a top buyer in Aug, buying 61,415 MT, followed by Bangladesh at 24,271 MT and UAE at 22,758 MT. India may remain major buyers in Sep and Oct too.

Field Pea export from Canada increased in August-2021 to 114,798 MT, higher by 38% from July when 83,201 MT was exported. Canada had exported 127,488 MT in Aug-2021. China, US and Venezuela were major buyers in Aug-2021, importing 52,904, 27,468 & 7,411 MT respectively. Demand from China continues and US too would continue to import for feed industries.

According to ABARES (Australian Bureau of Agricultural and Resource Economics and Sciences), Chickpea production in Australia is estimated to be 8,44,000 tonnes in 2021-22 according to September update. Last year's production was 7,33,000 tonnes while June 2021-22 estimate was 7,33,000 tonnes. Lentil's production in Australia is projected to be 6,39,000 tonnes against last years production of 6,34,000 tonnes while June 2021-22 estimate was 5,89,000 tonnes.

Monthly Outlook: -Pulses are likely to trade steady to slightly firm in Nov.

*AW estimates

Note (For Chana and Masur crop year is 2020-21 and it is being marketed in FY 2021-22

Marketing year (Urad: Aug to July, Moong: July to June, Tur: Dec to Nov. Chana: March to Feb and Masur: March to Feb) AW kharif 2nd Adv. production estimate for Tur, Moong & Urad published.

Kharif Pulses:

Urad: Agriwatch has estimated 23.42 lakh MT Urad production in 2021-22 including 17.65 lakh MT in Kharif season. Import volume would increase due to free import policy till Dec-2021 and the consignment would be allowed to hit Indian ports till Jan-. New crop has already started. Carryout would decrease slightly due to quality and yield loss in Kharif season.

Moong: Moong production has been pegged at 22.98 lakh MT including rabi. Kharif Moong production has been pegged at 15.75 lakh MT. Import may increase to 1.75 lakh MT. Import is free. If parity turns in favour of Indian importers, import may continue. As carryout is low, price may continue to rule at higher level, supported by the higher MSP. Procurement has already been started from 1st Nov-2021.. Carryout would slightly increase due to higher import flow.

Tur: AW has published its 2nd Adv. estimates for Tur for 2021-22 and expects it to increase to 40.69 lakh MT and the figure may move up as weather condition is favorable for the standing crop right now. Higher production would ensure better supply side next season. As availability would increase, any spike in Tur market is unlikely at this point of time.

Rabi Pulses:

Chana: Agriwatch has pegged Chana production at 97.67 lakh MT for crop year 2020-21, to be marketed in 2021-22. AW preliminary estimate for Chana and Masur is underway and would be published in Dec-Monthly report. Supply side would decrease from 128.32 to 121.99 this year. Carryout would decrease from 21.32 lakh MT to 18.49 lakh MT this year. It may keep price well supported throughout the year.

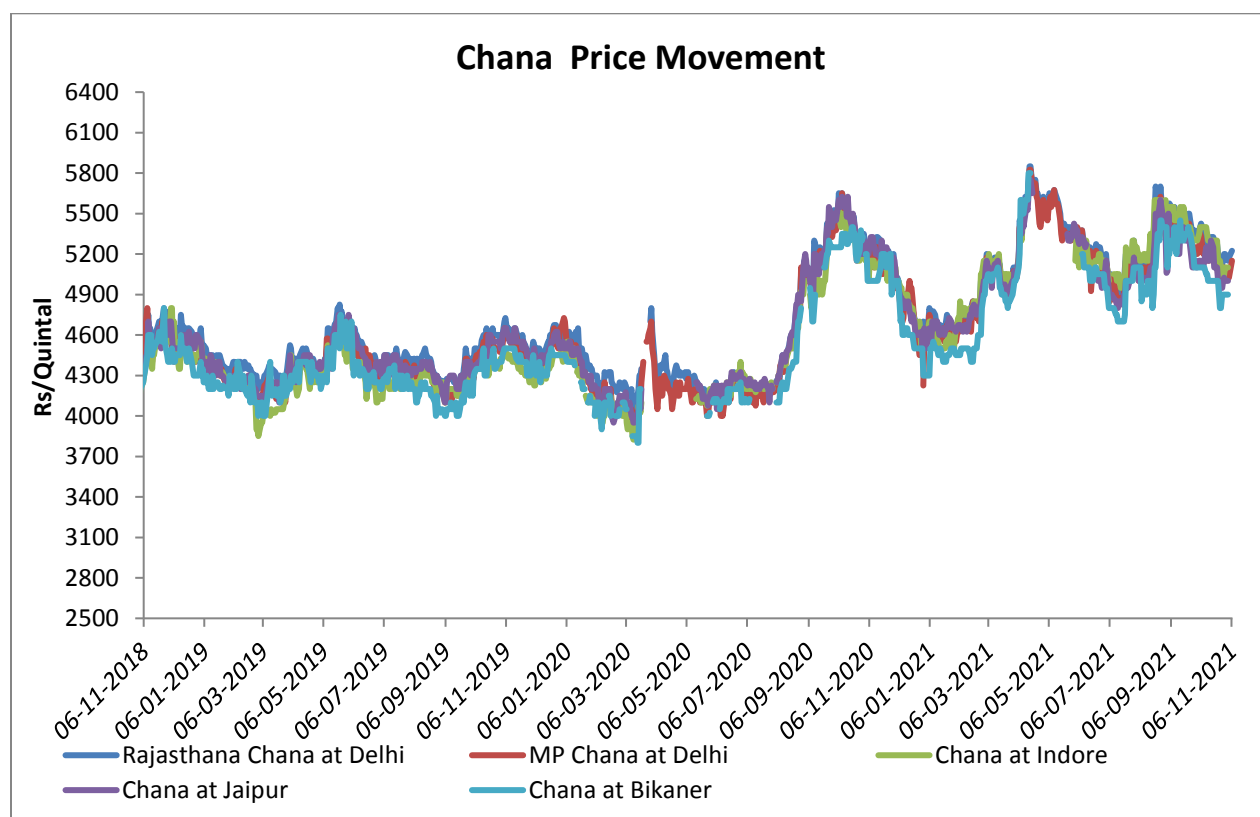

Masur: AW has revised its lentils production down from 13.49 lakh MT to 11.73 lakh MT. Prices are higher as import scenario is not very comfortable due to the low crop size in Canada. Low carryout and domestic production are keeping prices up. New crop in India comes in Feb end. So availability would be tight and the price firm. Sowing for Chana and Masur for the crop season 2021-22 has started from mid-Oct. As import flow may decline, carryout too would decrease to 5.70 lakh MT.

Chana (Chickpeas /Bengal Gram):

Market Recap:

Slight recovery might be seen in Chana cash market in Nov as demand is yet to improve. Demand for gram flour may improve in the winter season. Sowing of Bengal Gram has already commenced and may pick up by the third week of Nov. This year area may decrease due to the low price in the domestic market. As stock of Chana in the Central Pool is ample, so spike in Chana cash market is unlikely. It may continue to rule in the range of 5000-5350 in Nov. Farmers have covered 20.94 lakh ha as on 5th Nov-2021 against 20.47 lakh ha last year till 5th Nov-2020.

Import flow would remain restricted as duty plus Cess is 60%. Import flow may continue from the least developed countries as they enjoys benefit of zero duty. Following graph illustrates Chana price movement in different markets:

Price Dynamics: Prices are likely to trade steady to slightly firm in Nov-2021 due to:

- Improved demand for besan
- Fear of low area coverage
- More downside movement unlikely due to higher MSP(5230)
- Demand is expected to improve due to the commencement of marriage season.
- Change in import policy unlikely soon.
- Delayed start of sowing

Seasonality Index: hints steady to slightly firm movement for spot market in Nov -2021.

Rabi Planting Progress 2021-22 (Till 05th Nov-2021):

Rabi Pulses Acreage as on 05 Nov 2021

Area: Lakh Ha Source: Govt. of India

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Peas sowing area coverage is running smoothly and area under this is likely to increase by 5 to 6 % due to higher prevailing prices in the domestic markets and restricted import. Govt is unlikely to free import this season too. Consumers have shifted to other dals available in domestic market at competitive prices. Prices of peas in Kanpur market has come down to 5800. It may move up if Chana prices move up in domestic markets. Under prevailing condition range bound movement is expected. Chana may continue to cap peas prices in Nov too.

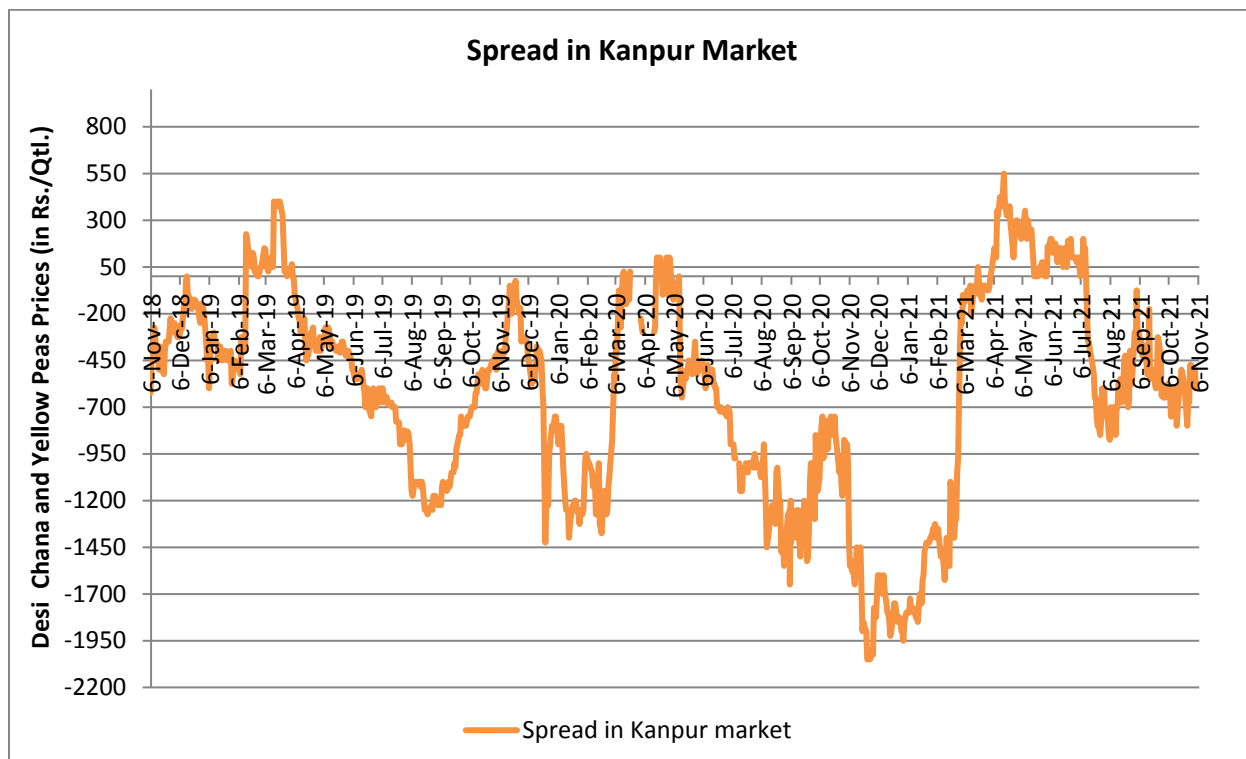

Price Dynamics:

Pea market is expected to trade steady to slightly firm due to:-

- Low availability in domestic market
- New crop is almost 4 months away from now
- Restricted import and low price of Chana
- Weak demand for Matar and Dal

Spread With Chana:

Spread between Chana and Peas, at Kanpur market continued to move in negative zone. The gap has increased from minus 437 to minus 600 now. Spread is expected to remain in the negative zone in Nov too on relative movement in Chana prices.

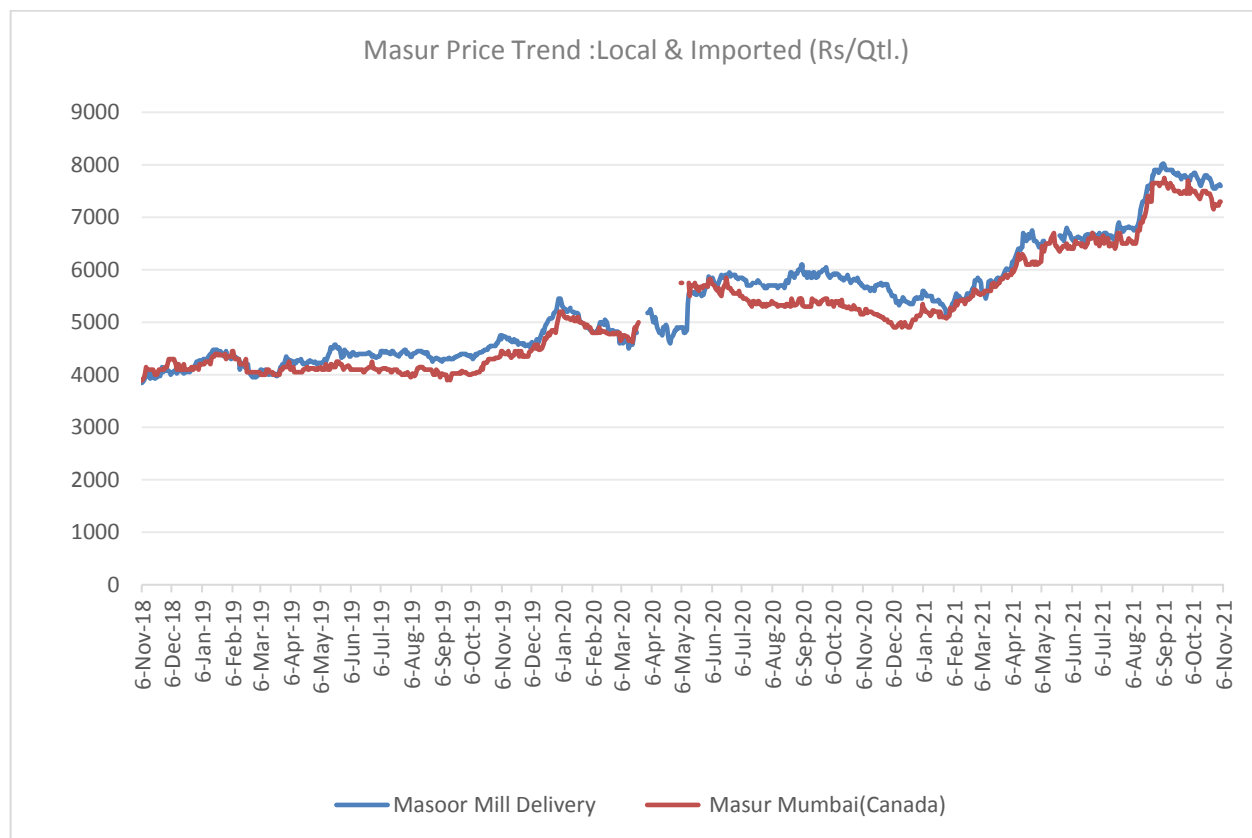

Market Outlook For Nov: Steady to slightly firm movement is expected..

Masur (Lentils):

Lentils cash market traded down due to weak demand in festive season. Old imported stock is being sold as per quotes seen in Canada. Import volume of new Canadian crop is low. Indian buyers are not willing to buy at higher price as availability at port is higher than normal expectation. Australian crop is almost ready to be harvested and sale competition between Canada & Australia may go up and Indian importers are waiting for downward correction in the global market. Govt.'s policy like stock limit too have helped to contain the prices. If stock limit continues, spike in Lentils markets is unlikely. Slight recovery might be seen in the end of Nov.

Indian farmers have covered 2.57 lakh ha this year so far, up by 1.62 % from last year. Normal area under lentils is 14.90 lakh ha. This year it may cross 16 lakh ha. Area in UP, MP and Bihar is likely to increase by 5 to 8 %.. Sowing is yet to pick up.

Price Trend In Cash Market:

Note: Red colour shows Masur Canada:

Price Dynamics:

In Oct-2021, average price in key market Kanpur was down by 1.84 % to Rs 7714 per qtl. over sep. Prices are likely to trade steady to slightly firm in Nov-2021.

Steady to firm tone **is expected in Nov due to:**

- Low import volume and likely improvement in demand
- Importers are selling old stock as per Canadian quotes
- New local crop 4 months away.

Outlook fo Nov: Steady to slightly firm movement might be seen

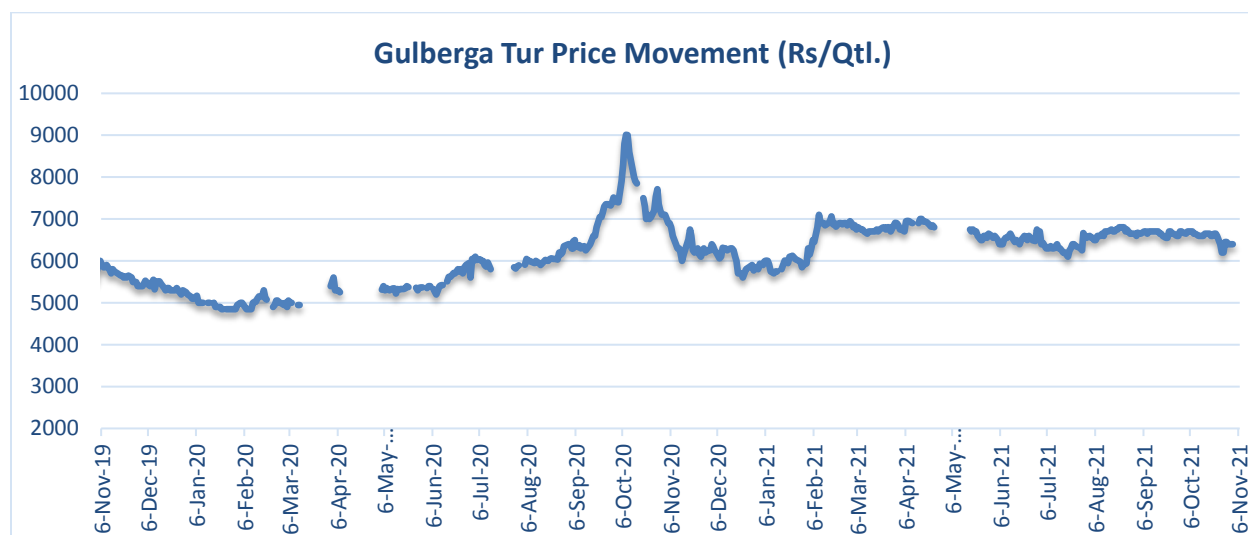

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Market Recap:

Tur crop is excellent in major growing states like Maharashtra and Karnataka and normal to good in other states. New crop arrival from the early shown crop is expected by the end of this month. Arrival would start from Sholapur region in Maharashtra. Followed by Bijapur region in Karnataka. Pressure on Tur prices may continue and it may slip below MSP(INR 6300 per qtl). Import in limited quantity continues and the prospects of bumper crop would ease supply side in coming months. Tur is being traded at 6300-6500 in Gulbarga market while imported Tur in Mumbai is being offered at Rs 6000. Myanmar is offering Tur at \$800 per Mt, basis Indian ports. Steady to slightly weak tone might be seen in Nov.

Tur area stands at 50.02 lakh ha which is 1.84 lakh ha more than previous year's 48.18 lakh ha. Prices of Tur has been stable during the week at 6400-6700 in various market. Range bound movement is expected this week. Import continues from Myanmar and Mozambique. Following chart shows the price movement:

Price Dynamics:

In Oct-2021, average price in Gulbarga market decreased by 1.29% to Rs 6575. As import is on the new crop condition is good so far. So, prices are likely to decrease.

. Tur price in Nov is likely to trade weak due to:

- New crop starts hitting market from end Nov
- Import flow
- Steady demand
- Good availability of old crop

Seasonality Index-depicts steady to slightly firm tone.

Market Outlook for Nov:

Weak tone may prevail in the market

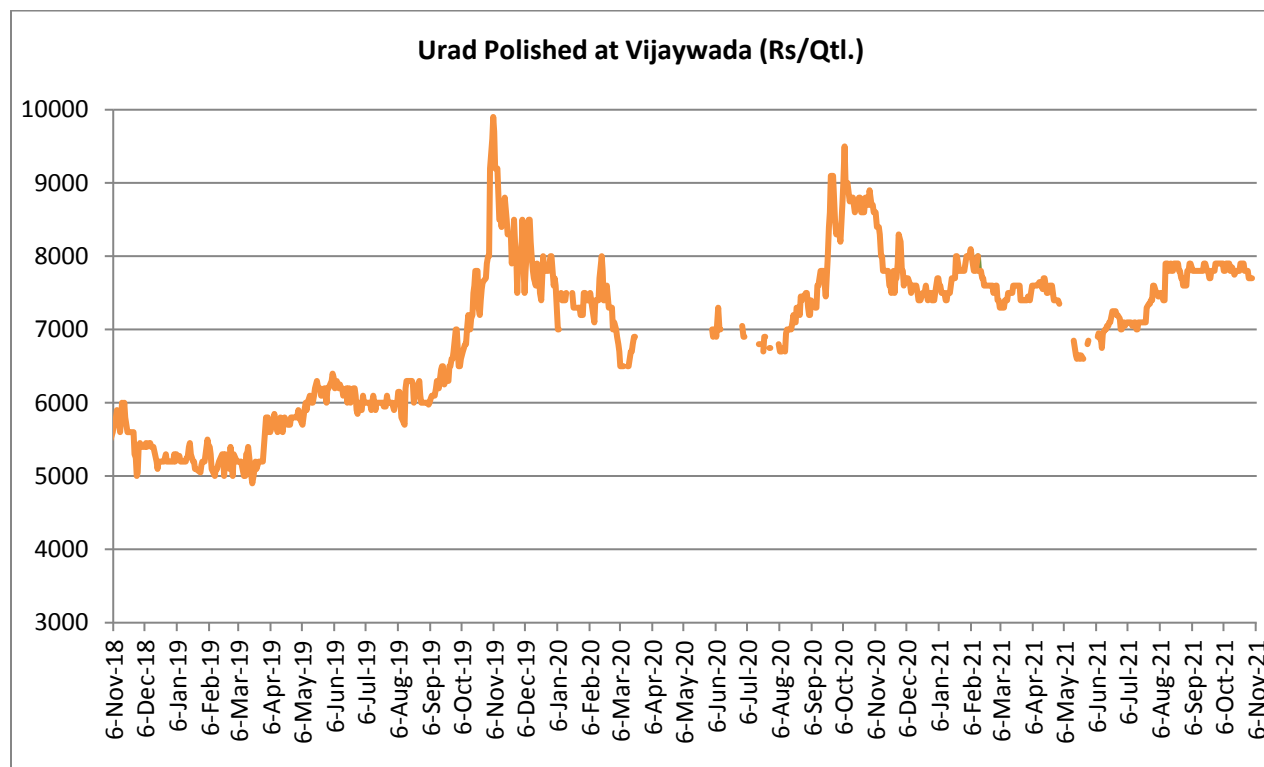

Urad (Black Matpe/Black Gram)

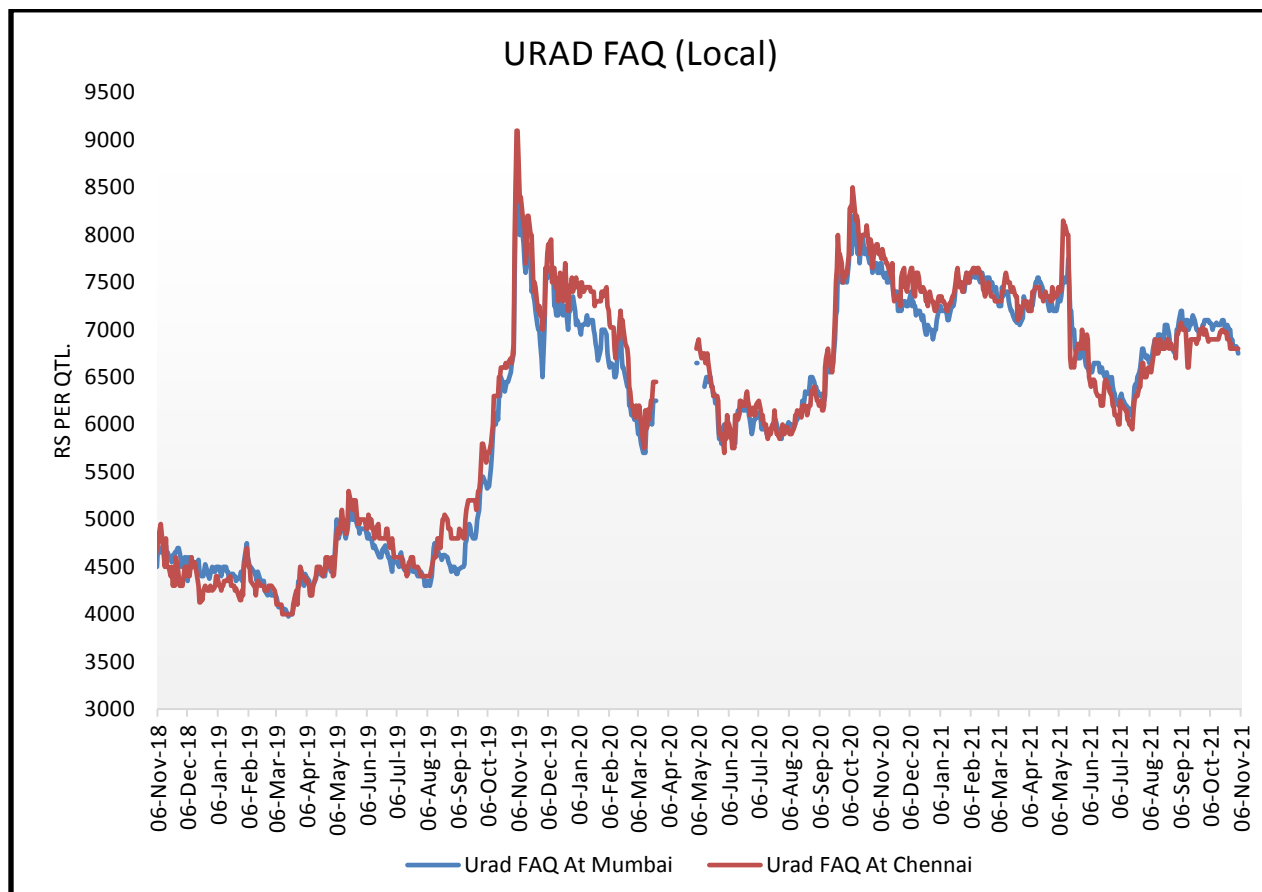

Fundamental Analysis and Outlook:

Market Recap:

Urad cash market increased by 50 to 6904 in Oct due to tight supply side, the low volume of import and quality loss due to rains at the time of harvesting in M.P. & Rajasthan. Rabi sowing has just started and it got delayed by 10 days in major growing south Indian states. Demand is normal right now and may improve in coming weeks. Import flow is rather slow, so prices may continue to rule at higher level throughout Nov-Dec. Rabi area may increase by 5 to 10 %.

As per government's sowing data released on 17th Sep-2021, Indian farmers have planted 39.43 lakh ha against the season's normal of 37.96 lakh ha and 38.65 lakh ha last year in Kharif season. In Chennai Urad is being traded at Rs 6800 and in Mumbai at 6700-6750. As it is lean season supported by tight supply side, prices may move slightly up.

Seasonality Index depicts steady to steady to slightly firm movement in Nov-Dec-2021.

Price Dynamics:

In Oct-2021, average prices in key markets including Mumbai/was down by 0.12 % to 6. Prices may stay steady to slightly firm in Nov due to:

- Low availability of quality crop
- Poor import flow
- Higher quotes in Myanmar
- Size of Rabi area is low(Normal around 9 lakh ha)

Market Outlook for Nov: Prices are likely to trade steady to slightly firm.

Fundamental Analysis and Outlook For Moong:

Market Recap:

Pressure on Moong market continues despite procurement drive and higher procurement target. Quality of Moong coming into market is average to good. Market is expected to improve if demands increase. In Jaipur market Moong is being traded in the range of 6500-7000. Bold quality is being quoted above MSP. Import in limited quantity is on. As Kharif arrival is coming into markets supply side would be at comfortable level. Agriwatch expects range bound movement in Nov

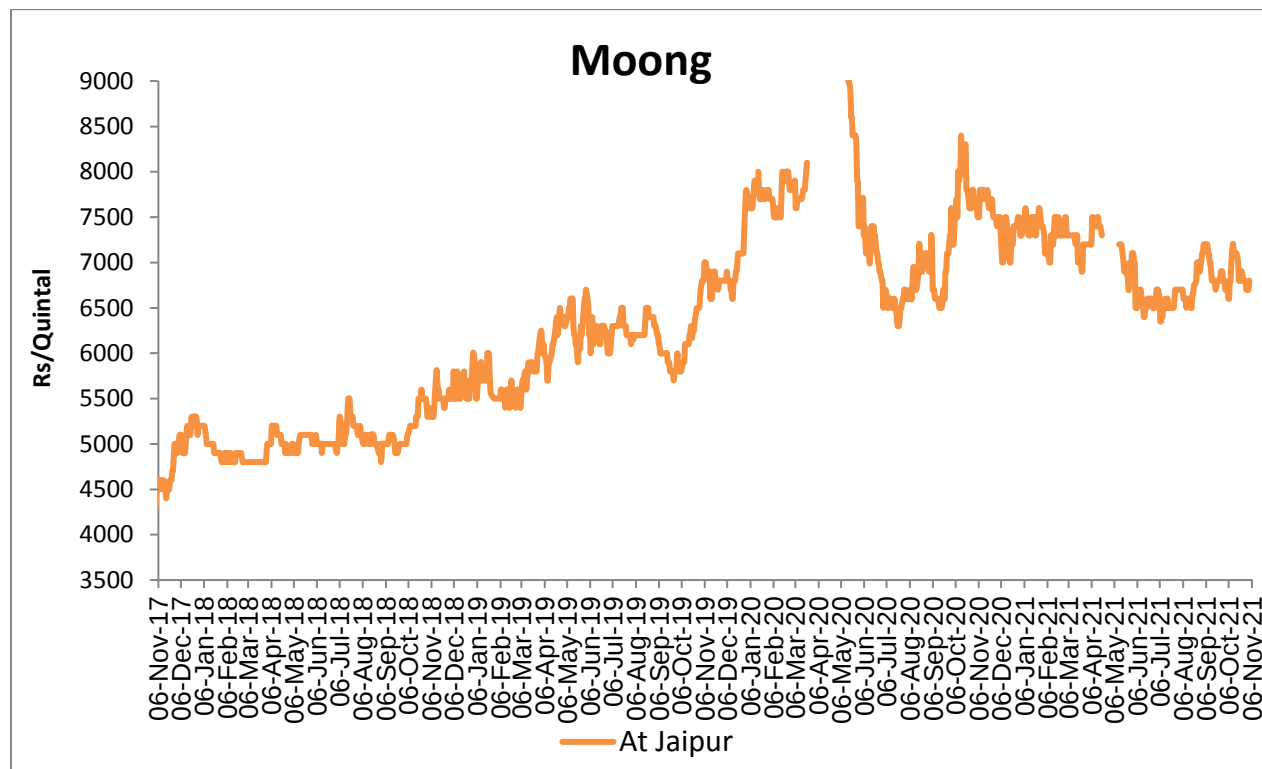

Market is expected to trade steady to slightly weak in Nov due to:

- The ongoing procurement drive
- Import
- Weal demand from retail and wholesale sectors.

Market Outlook for Nov: Range bound movement is expected

Wholesale Price Index-Monthly

The chart displays the monthly Wholesale Price Index for six categories of commodities from September 2017 to September 2021. The Y-axis represents the index value, ranging from 50 to 200. The X-axis represents the time period in months. The categories are: ALL COMMODITIES (blue line), FOOD ARTICLES (red line), FOOD GRAINS(CEREALS+PULSES) (green line), PULSES (purple line), Gram (Chana) (teal line), and Arhar (Tur) (orange line). The ALL COMMODITIES index shows a steady upward trend, starting around 115 and ending near 135. FOOD ARTICLES and FOOD GRAINS show significant volatility, with FOOD GRAINS peaking near 200 in early 2021. PULSES, Gram (Chana), and Arhar (Tur) also show fluctuations, generally staying between 100 and 175.
