Pulses Sector-Highlights

All India Rabi pulses sown area is up by 0.43 % to 113.97 lakh ha against 113.48 lakh ha last year as on 3RD Dec-2021. Chana area is up by 1.77 % to 81.43 lakh ha while Moong area was down by 24.71% to 0.65 lakh ha last year. Urad bean area is down by 8 % to 3.22 lakh ha against 3.50 lakh ha last year till date. Sowing of Moong and Urad is likely to recover in the coming weeks. Lentil area is up by 4.41% to 13.03 lakh ha so far. As sowing of Masur has been delayed by 15 days in states like West Bengal and Bihar, sowing might be end up with last year's level. Bad weather conditions in South India are hampering sowing activities for Urad and Moong. Weather condition in Dec is very crucial from the sowing point of views. In other states crop condition is very good, barring some losses for Urad and Tur.

Despite reports of some losses for Tur crop in Karnataka, the overall crop condition is good. The crop is in excellent condition in other major growing states like Maharashtra, Madhya Pradesh, Uttar Pradesh and Gujarat. New arrivals are expected to increase by the end of this month. Moisture level in the new crop is high up to 18 to 20%. Import flow continues from the South African countries at cheaper price. So, the new arrivals, import flow and the below normal demand are keeping prices under pressure throughout Dec. As moisture level is high and the African crops are available at 5200-5300, prices have decreased below MSP. It may recover slightly if bad weather condition continues. Tur in Gulbarga market is being offered at 6275 and may cross MSP. Myanmar is offering lemon Tur at \$750 per MT basis Indian ports and may move up to \$780-790. Tur may continue to trade in the range of 6000-6400 in December. Despite news for crop losses, the final size of the crop would be around 4MMT under prevailing weather condition. It would cap any attempt of spike. More down ward trend is unlikely as Nafed is gearing up to start procurement by end Dec. Karnataka govt. may start procurement from 15th of Dec-2021

Area under Gram may decrease this year despite a good recovery during last two weeks. As of now farmers have covered 81.43 lakh ha against 80.01 lakh ha last year as on 3rd Dec 2021. Area coverage may end up with 106 to 108 lakh ha against 116 lakh ha last year. It is due to higher coverage of Mustard in major Chana growing states like Madhya Pradesh and Rajasthan. As the availability of old stock is good enough to tackle the emerging demand, spike in the cash market is unlikely. Demand is weak. As prices of come down, market may expect a recovery of 200 in coming weeks. Need based buying by mills, import flow and an estimated production size of 100 lakh MT would not allow market to go on the bull-run until or unless some major losses occur due to any unprecedented weather aberrations. Even in the lean season, Chana in Delhi market would continue to trade in the range of 5100-5400. Availability is higher than demand. Chana stock in the central pool is around 8 lakh MT. Apart from it, around 18 to 20 lakh MT is with private hands/farmers against consumption of 21 in next three months. Stock with mills has not been included here.

Area under Masoor has recovered and it increased by 2.08 lakh ha last week to 13.03 lakh ha. It is up by 4.41 % from last year same time but it may end up with last year's level, as some of Masoor growing area in Bihar and west Bengal are still under water. As the Masoor sowing season has entered in last phase now, the pace of sowing may decline in the coming weeks. Overall sentiment remains steady to firm as the cost of import is higher so Masoor may continue to trade at higher level. Demand too is expected to improve. Quotes in the overseas market are steady and may decrease slightly as the Australian crop has started

coming into global market now. Indian importers are trying to buy Australian crop. Stock at port is said to be around 2 lakh MT. Agriwatch expects 1.5 lakh MT import from Australia in Jan, Feb and Mar. In Feb end domestic crop would be available. Production size might be in the range of 11.50 to 12 lakh MT this year as the weather condition in the growing region has been good so far. The overall tone is steady to slightly firm in Dec. Jan and Feb-2022 weather condition would be crucial for Masur crop. Demand is yet to pick up. The landed price for Canadian Masur is 7300 in Mumbai. Masur in Kanpur market is being traded at 7600.

Urad sowing is slower than usual and this may limit acreage increase by 4 to 5 % despite attractive prices prevailing in the market. Import flow too has been low amid tight supplies and quality loss in the Kharif season. Also demand is weak. Farmers have covered 3.22 lakh ha so far down by 8 % from last year. The normal area under Urad is 9.07 lakh ha the major Rabi Urad growing states are Andhra Pradesh and Tamil Nadu and contribute 80 % of total Rabi production in India. The cause for concern is that area in Tamil Nadu is running down by 26 %. Prices have decreased due to weak demand at this point of time amid continuous import flow. India imported 91,000 MT in Oct and 69,000 MT in Nov-2021 and the same quantity is expected to hit in Dec. So, supply side may improve and it would cap market to jump. Myanmar is offering Urad FAQ and SQ at \$885 and 985 per MT basis Indian ports. It has decreased by \$30/35 in a week. The overall sentiment seems steady to slightly weak for the Urad cash market.

Moong sowing is also slow and a clearer picture will emerge by end December. Farmers have covered .Farmers have covered only 0.64 lakh ha so far against 0.85 lakh ha last year. However, area may improve as sowing season runs for longer time for rabi moong. Prices of Moong may continue to trade under pressure as demand is weak while procurement drive has slowed down. Availability is good against demand .So range bound movement is expected for the Moong price. Myanmar is offering Moong at \$880 to 1000 per MT, basis Indian ports. Moong Annasewar has decreased by \$50 to \$880.

Global Market Updates:

- **The harvesting of pulses winter crop in Australia is running smoothly and is helping in meeting the strong demand in the global market despite the low availability of containers.** As per the latest updates by Pulses Australia, the prospect for export from Australia is very good because of low production in Canada this year. Indian buyers were reluctant to buy in volume from Canada in the beginning of Nov. as they were aware of the bumper Australian crop. The production estimates for the Australian pulses has been published. As per the latest estimates Australian would harvest 8.44 lakh MT Chickpeas in 2021-22 (Abares estimate) while Pulses Australia sees it at 8.70 lakh MT. The 10 years production average is 7.89 lakh MT. Chickpeas availability in the global market would increase and it may ensure stability in price in the global market.
- **As per the latest Abares estimate Lentils production in Australia pegged at 6.39 lakh MT in 2021-22. The Pulses Australia sees it at 7.10 lakh MT.** The 10 year's average production for Lentils is 4.24 lakh MT. Indian buyers may take interest in Australian Lentils. No deals has been struck so far. However, containers issue and higher freight would keep the import costing high in 2022 too. Major growing states like Queensland and northern NSW, containers availability is still low, and no path to bulk export exists because shipping slots are fully booked. This means scope for immediate export in bulk volume is limited. Prices have come down to a certain extent and growers may prefer to hold stock for better price.

- **The Field Peas production in Australia may decrease from 10 years average of 2.8 lakh MT to 2.5 lakh MT in 2021-22, as per the latest fig. published by Abares.** Australia Pulses sees it at 3.20 lakh MT. Export demand for the Australian Peas may increase as availability in Canada is down while prices are ruling higher. Malaysia & China would continue to import peas from Australia.
- **Agriculture and Agri Food Canada (AAFC) has finalized the production of lentils in Canada at 18.02 lakh tonnes for 2021-22 as per recent November reports.** Production is lowered by 10.66 lakh tonnes from last year's production of 28.68 lakh tonnes.
- **Field peas import in Spain increased by 268 % to 58127 MT in Sep-2021, as per the latest update by Eurostat data.** Spain had imported 15778 MT in Aug. Total import from Jan to Sep reached at 116257 MT against 132195 MT last year same time. Russia supplied 49970 MT in Sep, followed by Ukraine at 7591 MT.
- **As per the latest update by Statistics Canada, Green Peas export from Canada declined in Sep-2021 to 9890 MT against 17437 MT in Aug.** Canada has exported total 27327 MT during the marketing year. It is down by 29% from last year till Sep. The UAE was the biggest importer, buying 3,573 MT, followed by Colombia, taking 2,184 MT and Philippines at 865 MT.
- **Lentils production in the US is expected to decline by 31% to 0.23 Mt in 2021-22.** Despite higher area coverage production would decrease due to the low yield realization and the higher abandonment. US may export 2 lakh MT Lentils in 2021-22. The major buyers are EU, Canada, India and Mexico.
Firm Sentiment May Prevail in Dec-2021

*AW estimates

Note (For Chana and Masur crop year is 2020-21 and it is being marketed in FY 2021-22)

Marketing year (Urad: Aug to July, Moong: July to June, Tur: Dec to Nov. Chana: March to Feb and Masur: March to Feb) AW kharif 4th Adv. production estimate for Tur, Moong & Urad published and Preliminary estimate s for Chana and Masur.

Kharif Pulses:

Urad: Agriwatch has estimated 23.42 lakh MT Urad production in 2021-22 including 17.65 lakh MT in Kharif season. Import volume would increase due to free import policy till Dec-2021 and the consignment would be allowed to hit Indian ports till Jan-. New crop has already started. Carryout would decrease slightly due to quality and yield loss in Kharif season.

Moong: Moong production has been pegged at 22.98 lakh MT including rabi. Kharif Moong production has been pegged at 15.75 lakh MT. Import may increase to 1.75 lakh MT .Import is free. If parity turns in favour of Indian importers, import may continue. As carryout is low, price may continue to rule at higher level, supported by the higher MSP. Procurement has already been started from 1st Nov-2021.. Carryout would slightly increase due to higher import flow.

Tur: AW has published its 2nd Adv. estimates for Tur for 2021-22 and expects it to increase to 40.69 lakh MT and the figure may move up as weather condition is favorable for the standing crop right now. Higher production would ensure better supply side next season. As availability would increase, any spike in Tur market is unlikely at this point of time.

Rabi Pulses:

Chana: Agriwatch has pegged Chana production at 101.40 lakh MT for crop year 2021-22 while Masur at 12 lakh MT, despite delayed sowing. Supply side would decrease from 121.99 to 122.39 this year. Carryout would decrease slightly from 18.49 lakh MT to 18.39 lakh MT this year.

Masur: AW preliminary estimate for Masur pegged at 11.91 LMT for 2021-22, slightly higher than last year. New crop in India comes in Feb end. So availability would be tight and the price would remain firm. Carryout too would decrease to 5.70 lakh MT to 5.16 LMT.

Chana (Chickpeas /Bengal Gram):

Market Recap:

Chana market improved by 0.17 percent to 5171.5 in Nov from 5162.6 in Oct-2021. Prices may move up with improvement in demand and fear of the lower area this year. Chana and Wheat area in M.P., Rajasthan & Uttar Pradesh to some extent shifted to Mustard and other Lucrative crops. Chana in Delhi market is being traded at 5200 and may move up slightly to 5300-5400 in coming weeks.

This year area may decrease due to shifting of the Chana area to Mustard and Masur in M.P and Rajasthan. As stock of Chana in the Central Pool is ample, so spike in Chana cash market is unlikely. It may continue to rule in the range of 5000-5450 in Dec. Farmers have covered 81.01 lakh ha and may end up with 105 Lakh ha. against last year 111 lakh ha.

Import flow would remain restricted as duty plus Cess is 60%. Import flow may continue from the least developed countries as they enjoys benefit of zero duty. Following graph illustrates Chana price movement in different markets:

Price Dynamics: Prices are likely to trade steady to slightly firm in Dec-2021 due to:

- Mills active buying & Restricted sale from the central pool
- Fear of low area coverage
- Improvement in Dal and besan demand due marriage season.

Seasonality Index: hints steady to slightly firm movement for the local spot market in Dec -2021.

Area: Lakh Ha Source: Govt. of India

Field Pea (Matar/Dry Pea):

Fundamental Analysis and Outlook:

Despite high prevailing prices of Peas in the local market area could not increase as expected this year. Farmers have covered 8.60 lak ha so far ,down by 5% from last year as on 10th Dec-2021. Prices have decreased in comparison to Nov as the prices of Pulses(Chana) remained under control. At the current level peas price may get some support and prices should improve as stocks in domestic market is coming down fast, while new crop is three-four months away. Availability of green vegetable has increased and it has capped peas prices to some extent. As availability of Chana in domestic market is higher, any spike in the peas market is unlikely in Dec.

Govt is unlikely to free import this season too. Consumers have shifted to other dals available in domestic market at competitive prices. Prices of peas in Kanpur market has come down to 6000 from 6200 in the beginning of Nov. It may move up again if Chana prices move up in domestic markets. Under prevailing condition firm movement is expected.

Price Dynamics:

Pea market is expected to trade steady to slightly firm due to:-

- Low availability in domestic market
- New crop is almost 3 months away from now
- Restricted import and improving price of Chana
- Decreasing area.

Spread With Chana:

Spread between Chana and Peas, at Kanpur market continued to move in negative zone. The gap has increased from minus 650 to minus 791 in Nov. Spread is expected to remain in the negative zone in Dec too on relative movement in Chana prices.

Market Outlook For Dec: Steady to slightly firm movement is expected.

Masur (Lentils):

Despite slow start lentils area improved smartly in the first week of Dec. farmers have covered 14.89 lakh ha, higher by 4.86% from last year as on 10th Dec-2021. However, it may end at 15.50 lakh ha as farmers have covered more area under Mustard this year in Uttar Pradesh and M.P. Import flow continues from Australia and Canada.

Stock limit, new Australian crop coming into India and old stock at ports have kept lentil prices under check and in Nov prices decreased from 7500 in Oct to 7250 in Nov. As demand has started picking up, prices of lentils may move up again by 250-300 in by Dec end. New crop is expected to be around 11.90 to 12 lakh MT as per the initial production estimates.

Price Trend In Cash Market:

Price Dynamics:

In Nov-2021, average price in key market Kanpur was down to 7632 per qtl. from 7714 in Oct. Prices are likely to trade steady to slightly firm in Dec-2021.

Steady to firm tone **is expected in due to:**

- Low import volume and likely improvement in demand
- Decreasing stock at ports
- New local crop 3 months away and
- High price in the global market due to poor crop in Canada

Outlook fo Dec: Steady to slightly firm movement might be seen

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):**Fundamental Analysis and Outlook:****Market Recap:**

Arrival of Tur is likely to increase by the third week of Dec in Maharashtra, Karnataka. Despite 10 % crop loss in Karnataka, prices remain stable or slightly decreased as Bumper production is expected in Maharashtra and other states. Good import volume and almost normal production would keep supply side at comfortable level. As prices are ruling below MSP, Karnataka govt may start procuring Tur in the second half of Dec. State govt would procure 2.5 lakh MT. Apart from it Nafed may start buying by the end of this month. It may push up price to MSP level in coming weeks. Tur is being traded at 6000-6250 in Gulbarga market while imported Tur in Mumbai is being offered at Rs 6100. Myanmar is offering Tur at \$770 per Mt, basis Indian ports. Steady to slightly firm tone might be seen in Dec.

Tur area stands at 50.02 lakh ha which is 1.84 lakh ha more than previous year's 48.18 lakh ha. Prices of Tur has been stable during the week at 5800-6200 in various market. Import continues from Myanmar and Mozambique. Following chart shows the price movement:

**Price Dynamics:**

In Nov-2021, average price in Gulbarga market decreased by 4.5% to Rs 6150.

. Tur price in Dec is likely to trade firm due to:

- Delayed harvesting and crop loss due to rains at maturity stages.
- Likely commencement of procurement
- Improvement in demand due to marriage season
- Decreasing availability of old crop

Seasonality Index-depicts steady to slightly firm tone.

Market Outlook for Dec:

Improvement expected in Dec

Urad (Black Matpe/Black Gram)

Fundamental Analysis and Outlook:

Market Recap:

Urad area could not increase as expected last month. The reason behind it is bad weather condition in major rabi growing states like Andhra Pradesh and Tamil Nadu. Farmers have covered 3.70 lakh ha so far against 4.15 lakh ha last year as on 10th Dec-2021. As weather is opening now, area may improve. Delayed sowing amid excess moisture in the field may affect growth and yield of the crop. Supply–demand side is tight and it would keep Urad cash market at higher level. Quantity and quality loss in Kharif season and low area coverage in Rabi season so far may push up Urad price once again. Import flow is low. As soon as demand improves, Urad may move up by 200-300 from the current level.

As per government's sowing data released on 17th Sep-2021, Indian farmers have planted 39.43 lakh ha against the season's normal of 37.96 lakh ha and 38.65 lakh ha last year in Kharif season. In Chennai Urad is being traded at Rs 6825 and In Mumbai at 6975. As it is lean season supported by tight supply side, prices may move up slightly.

Seasonality Index depicts steady to steady to slightly firm movement in Dec-2021.

Price Dynamics:

In Nov-2021, average prices in key markets including Mumbai/was down by 350 to 7479. Prices may stay steady to slightly firm in Dec due to:

- Low availability of quality crop
- Slow import flow
- Higher quotes in Myanmar
- Low rabi area coverage

Market Outlook for Dec: Prices are likely to trade steady to slightly firm.

Fundamental Analysis and Outlook For Moong:

Market Recap:

Pressure on Moong market continues despite procurement drive and higher procurement target. Quality of Moong coming into market is average to good. Market is expected to improve if demands increase. In Jaipur market Moong is being traded in the range of 6000-6600. Bold quality is being quoted above MSP. Import in limited quantity is on. As Kharif arrival continues to come into markets supply side would be at comfortable level. Agriwatch expects range bound movement in Dec too.

Market is expected to trade range bound in Dec due to:

- Higher availability of inferior quality in the market
- Restricted Import flow
- Weak demand from retail and wholesale sectors.
- Availability of stock in the central pool

Market Outlook for Nov: Range bound movement is expected

Price Trend:

Wholesale Price Index-Monthly

The chart displays the monthly Wholesale Price Index (WPI) for various commodities from October 2017 to October 2021. The Y-axis represents the index value, ranging from 25 to 225 in increments of 25. The X-axis shows the months from Oct-17 to Oct-21. The chart includes six data series: ALL COMMODITIES (blue), FOOD GRAINS(CEREALS+PULSES) (green), Gram (Chana) (teal), FOOD ARTICLES (red), PULSES (purple), and Arhar (Tur) (orange). The index generally shows an upward trend, with a significant peak in late 2021 reaching over 200 for some categories.
