### Pulses Sector-Highlights

**Chana and Masur sowing recovered smartly at the end of the Rabi sowing season and exceeded the area coverage as expected in Dec.** However, other Rabi pulses like Moong, Urad, Pea and others have not fared well. Indian farmers have covered 156.22 lakh ha area under pulses, down by 0.97% till 7<sup>th</sup> Jan-2022. The region behind the low area coverage is mainly attributed to bad weather conditions in Nov and Dec-2021. Excess rains, hailstorm and flooding disturbed the normal sowing pace in South India. In other states farmers shifted to other lucrative crops like Mustard, Bengal Gram, Cotton and Lentils. Rabi sowing season is almost over now except Moong and Urad. Farmers have shown 109.44 lakh ha under Chana against 107.17 lakh ha., 17.13 lakh ha under Masur against 16.60 lakh ha, 9.74 lakh ha against 10.21 under pea, 6.34 against 6.97 lakh ha under Urad and 2.67 against 4.34 lakh ha under Moong. Under prevailing condition Urad and Moong area is unlikely to match last year's level. Jan & Feb weather conditions remain crucial for the final size of the Rabi crop.

**Despite good area coverage (50 lakh ha) in Kharif season, Tur crop could not fared well due to bad weather condition in Nov and Dec-2021.** Early shown crop yield in Maharashtra and Karnataka, the main growing states got affected. Quality of crop too is poor while crop coming into markets is either fair average quality or dis-colored, especially in Karnataka. There may be a short supply of quality crop in 2022. Import would continue with the extension of import time line. Under prevailing condition production of Tur might be similar to last year's level at around 37 lakh MT against earlier estimate of 40 lakh MT. So carryout is bound to decline to 4.90 for the ongoing season. The season started with 6.29 lakh MT carryin. This means total supply would decline this year 49.64 to 48.4 lakh MT. As import from the African countries and Myanmar would continue, gap is likely to be covered. Under the prevailing condition the declining trend has been capped. Reaction on the market price is already visible and prices have started recovering. It may move up further for the quality crop. Nafed may release old stock to control prices. As it is an arrival season rise would be limited in January-2022. Prices in Gulbarga market moved up 6250 to 6450-6500.

**Despite some losses to Chana crops in Dec-2021 due to excess rains/hailstorm, the overall condition at sowing front seems favorable** as farmers in Gujarat and Maharashtra fared extremely well. Area coverage in these states increased by 31.89 & 6.62 % respectively and covered the area loss seen in major states like Karnataka, A.P., M.P. & Jharkhand. Rajasthan, has covered slightly higher area this year, but the bad weather generated loss has curtailed the benefit of area gain. The overall situation seems good at supply front as the crop size may exceed 100 lakh MT this year under normal condition. Apart from it Nafed has ample old stock to keep supply side at ease. So Agriwatch sees price moving under the current range. As it is a lean season, demand may push up price slightly. In January Chana may continue to trade in the range of 4900-5300, depending on the quality of crop. Cheaper import from LDC countries and ample available old stock would continue to put a cap on price in the domestic market. Improved demand for besan and mill's fresh interest for buying from 15<sup>th</sup> of Jan-2022 amid bad weather condition may keep market well supported at the current level.

**Masur area recovered as expected two months earlier despite the slow start in the middle of the season.** Availability of old imported stock, govt's policy to control the market through various steps like stock limit, attempt to source it from Black Sea region and extension for import time line amid bumper Australian crop

helped Masur market trading down in India. Farmers in India has covered over 17 lakh ha and production size is expected to improve this year, may cross 12 lakh MT, if weather conditions remain favorable till feb-2022. The new season is likely to begin with 5.70 lakh MT carryin. Out of this imported stock at ports would be 2.5 lakh MT, one lakh MT with mills while another 1.5 lakh MT is said to be in various ware houses. So, the spike in the market is unlikely as the new cro would start hitting the market by end February. Slight recovery in market might be seen if bad weather condition hampers the standing crop. Agriwatch expects recovery of 100-200 in lentil market In January-2022. import flow from Canada is below the market expectation while import flow from Australia may increase.

**Rabi Urad sowing is still down by 9.04% to 6.34 lakh ha as on 7<sup>th</sup> Jan-2022. As sowing continues, improvement in area is expected.** However, it may remain low from the last year. Normal rabi area is 9 lakh ha. As the demand has started increasing, prices may recover in coming weeks despite good flow of import and the bumper crop size expected in Myanmar this year. Myanmar may harvest over 6.50 lakh MT in 2022. So, availability for India seems good. Harvesting in Myanmar would start in February. Here in local market prices of Urad moved up by 100 to 6600 in Mumbai while it was traded at 6300 in Chennai. As availability would increase, unexpected spike is unlikely in the local market. Urad FAQ and SQ prices increased by \$40 to 45 per MT to 848 and 922 per MT respectively. More upward momentum is unlikely as the new crop is at hand now. Domestic crop from rabi crop too is expected by the end of Feb/March. Import flow, weather condition in Jan/Feb and the size of Rabi crop would be crucial for price direction in Jan and Feb. The overall sentiment seems steady to slightly weak for the Urad cash market.

**Despite the slow recovery in Rabi area coverage, pressure on Moong price continues. Slack demand, availability of old and new stock amid continuous import are keeping price suppressed. Import would continue and would keep market well supplied. The government has already allowed the import of moong (green gram) to continue without quantitative restrictions under "free" category until March 31 next year. Besides, importers can continue to take physical delivery until June 30, 2022 if bill of lading is issued by March. In May 2021, Tur, Urad and Moong has kept into free import regime category till 31st October 2021. Rabi Moong has been sown on 2.67 lakh ha so far as compared to 4.34 lakh ha last year, down by 38.48%. Normal area for Moong for Rabi and summer crops combined stands at 9.41 lakh ha. Supply side is at comfortable level and prices are expected to stay at current level (6000-6700) . In Jaipur market price is steady at 5800- 6500. Range bound movement is expected this week despite the low area coverage. Recovery may continue for Rabi area.**

#### Global Market Updates:

**According to latest update from Canada Agriculture & Agri Food Canada, production of lentil has been revised down to 16.06 lakh MT, down by around 2 lakh MT from Nov-21 estimate. Canada had produced 28.68 lakh MT last year. As production size has decreased drastically this year, carry in is bound to decline from 4.06 lakh MT to 50,000 MT. Export would decrease to 17 lakh MT against 23.26 lakh MT last year. As the supply side would remain tight, yearly average price might rule in the range of \$1070-1090 per MT in 2022.**

**According to latest update from Canada Agriculture & Agri Food Canada, production of field pea has been revised down to 22.58 lakh MT, down by 23.36 lakh MT from 2020-21.** As availability is low, prices of Peas may rule near \$600 throughout 2022. Total supply would decline to 28.09 against 49.10 lakh MT last year. **According to latest update from Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES) Chickpea production in Australia is estimated as 10.04 lakh tonnes for 2021-22 as compared to last year's production of 7.33 lakh tonnes.** Area under Chickpea has been increased this year in Australia from 5.07 lakh ha to 6.33 lakh ha.

**According to latest update from Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES) lentils production in Australia is estimated as 6.56 lakh tonnes for 2021-22 as compared to last year's production of 6.34 lakh tonnes.** Area under lentils this year stands at 3.9 lakh ha as compared to last year's acreage of 3.68 lakh ha.

**Global Lentils market continues to ease due to weak seasonal demand in the domestic as well as international markets.** The difference between Green and Red lentils is widening and it has gone up to \$260 per MT against \$116 last season. This means supply side of green Lentils would continue to be tight in coming months. Availability of Australian crop has increased and the pressure seems to continue on Red Lentils price.

**The harvesting of pulses winter crop in Australia is running smoothly and is helping in meeting the strong demand in the global market despite the low availability of containers.** As per the latest updates by Pulses Australia, the prospect for export from Australia is very good because of low production in Canada this year. Indian buyers were reluctant to buy in volume from Canada in the beginning of Nov. as they were aware of the bumper Australian crop. The production estimates for the Australian pulses has been published. As per the latest estimates Australian would harvest 8.44 lakh MT Chickpeas in 2021-22 (Abares estimate) while Pulses Australia sees it at 8.70 lakh MT. The 10 years production average is 7.89 lakh MT. Chickpeas availability in the global market would increase and it may ensure stability in price in the global market.

**As per the latest Abares estimate Lentils production in Australia pegged at 6.39 lakh MT in 2021-22. The Pulses Australia sees it at 7.10 lakh MT.** The 10 year's average production for Lentils is 4.24 lakh MT. Indian buyers may take interest in Australian Lentils. No deals has been struck so far. However, containers issue and higher freight would keep the import costing high in 2022 too. Major growing states like Queensland and northern NSW, containers availability is still low, and no path to bulk export exists because shipping slots are fully booked. This means scope for immediate export in bulk volume is limited. Prices have come down to a certain extent and growers may prefer to hold stock for better price.

**The Field Peas production in Australia may decrease from 10 years average of 2.8 lakh MT to 2.5 lakh MT in 2021-22, as per the latest fig. published by Abares.** Australia Pulses sees it at 3.20 lakh MT. Export demand for the Australian Peas may increase as availability in Canada is down while prices are ruling higher. Malaysia & China would continue to import peas from Australia.

**Agriculture and Agri Food Canada (AAFC) has finalised the production of lentils in Canada at 18.02 lakh tonnes for 2021-22 as per recent November report-2021s.** It was reduced further tp 16.02 lakh MT in Dec. Production is lowered by 10.66 lakh tonnes from last year's production of 28.68 lakh tonnes.

**Field peas import in Spain increased by 268 % to 58127 MT in Sep-2021, as per the latest update by Eurostat data.** Spain had imported 15778 MT in Aug. Total import from Jan to Sep reached at 116257 MT against 132195 MT last year same time. Russia supplied 49970 MT in Sep, followed by Ukraine at 7591 MT.

**\*AW estimates****Note (For Chana and Masur crop year is 2020-21 and to be marketed in FY 2021-22**

**Marketing year** (Urad: Aug to July, Moong: July to June, Tur: Dec to Nov. Chana: March to Feb and Masur: March to Feb) AW kharif 4th Adv. production estimate for Tur, Moong & Urad published and Preliminary estimate s for Chana and Masur.

**Kharif Pulses:**

**Urad:** Agriwatch has estimated 23.42 lakh MT Urad production in 2021-22 including 17.65 lakh MT in Kharif season. Import volume would increase due to free import policy till Dec-2021 and the consignment would be allowed to hit Indian ports till Jan-. New crop has already started. Carryout would decrease slightly due to quality and yield loss in Kharif season.

**Moong:** Moong production has been pegged at 22.98 lakh MT including rabi. Kharif Moong production has been pegged at 15.75 lakh MT. Import may increase to 1.75 lakh MT .Import is free. If parity turns in favour of Indian importers, import may continue. As carryout is low, price may continue to rule at higher level, supported by the higher MSP. Procurement has already been started from 1<sup>st</sup> Nov-2021.. Carryout would slightly increase due to higher import flow.

**Tur:** AW has published its final. Production estimates for Tur for 2021-22 and expects it to stay at 37.11 lakh MT, slightly lower than last year. Bad weather condition during growth stages hampered the normal yield. As availability would decrease, prices may move up again as soon as arrival pressure decreases.

**Rabi Pulses:**

**Chana:** Agriwatch has pegged Chana production at 101.66lakh MT for crop year 2021-22 while Masur at 12 lakh MT, despite delayed sowing. Supply side would increase from 121.99 to 122.15 for Chana this year. Carryout would increase slightly from 18.49 lakh MT to 21.65 lakh MT this year. Consumption may decrease due to growing fear of restricted lockdown again.

**Masur:** AW preliminary estimate for Masur pegged at 11.91 LMT for 2021-22, slightly higher than last year. If weather condition remains favorable, production may increase further. New crop in India comes in Feb end. So availability would be slightly tight and the price would remain firm in Jan-2022. Carryout too would decrease to 5.70 lakh MT to 5.16 LMT.

**State-wise Rabi Sowing Pulses As area As on 7th Jan-2022:**

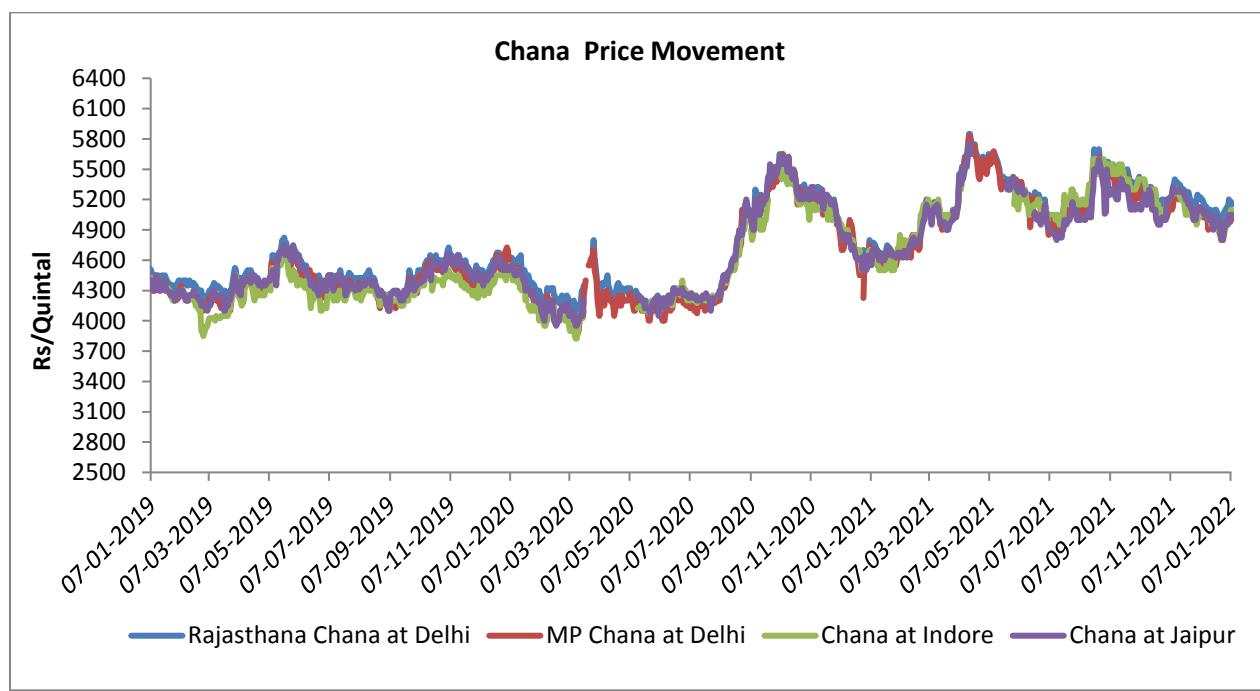

### **Chana (Chickpeas /Bengal Gram):**

#### **Market Recap:**

*Chana cash market is likely to move up by 200, taking clue from improving demand from mills and improving offtake for besan despite good area coverage for Chana. Farmers have covered 109.44 lakh ha so far, it was up by 2.12 % from the last year. Sowing of Chana is almost over now. Demand for Chana dal and besan has started improving, which was expected from mid of Nov earlier. Mills stock is decreasing and its buying is likely to continue till mid-Feb-2022. It may keep price well supported at the current level. Nafed has old stock and higher carryout would cap spike in Chana market. Import continues and in Nov –Dec India imported 45651.7 & 23251.23 MT respectively. Total import have gone up to 1.23 lakh MT from April to Dec-2021. As area coverage is higher the current uptrend would not sustain. New crop would hit the market from mid of Feb.*

*If weather remains favorable India is going to harvest over 100 lakh MT this year, considered to be ample for the domestic consumption. However, weather conditions in Jan and Feb and Mar are very crucial and it has potency to direct price either way up & down. The current uptrend is unlikely to sustain for a long time. Chana prices decreased by 3.42 % to 5017 in Dec-2021 over Nov. Average monthly price in Jan-2022 may increase as it is a lean season and the demand for dal and besan is expected to improve. Following graph illustrates Chana price movement in different markets:*

**Price Dynamics:** Prices are likely to trade steady to slightly firm in Jan-2022 due to:

- Improved demand for besan and dal
- Decreasing stocks in private hands
- Fear of bad weather conditions in the coming months
- Improvement in Dal and besan demand due marriage season.

**Seasonality Index:** hints steady to slightly firm movement for the local spot market in Jan -2022.

**Rabi Planting Progress 2021-22:**

### **Field Pea (Matar/Dry Pea):**

#### **Fundamental Analysis and Outlook:**

Pea's prices in domestic market decreased by 100 to 6100 in Dec-2021 over Nov monthly average price.it may decrease further despite low area coverage by 4.60 % to 9.74 lakh ha. Sowing season is almost over now and area may end up with 10 lakh ha.In a latest development IT department has raided on a pea trader/stockists in Kanpur and it may force another traders /stockists to release unaccounted stock soon in the market.it may ease supply side and cap uptrend in the market. Apart from it weak demand too would check prices of matar in local markets. New crop would hit market in March while availability of green vegetable would increase. So spike in market is unlikely in January-2022.

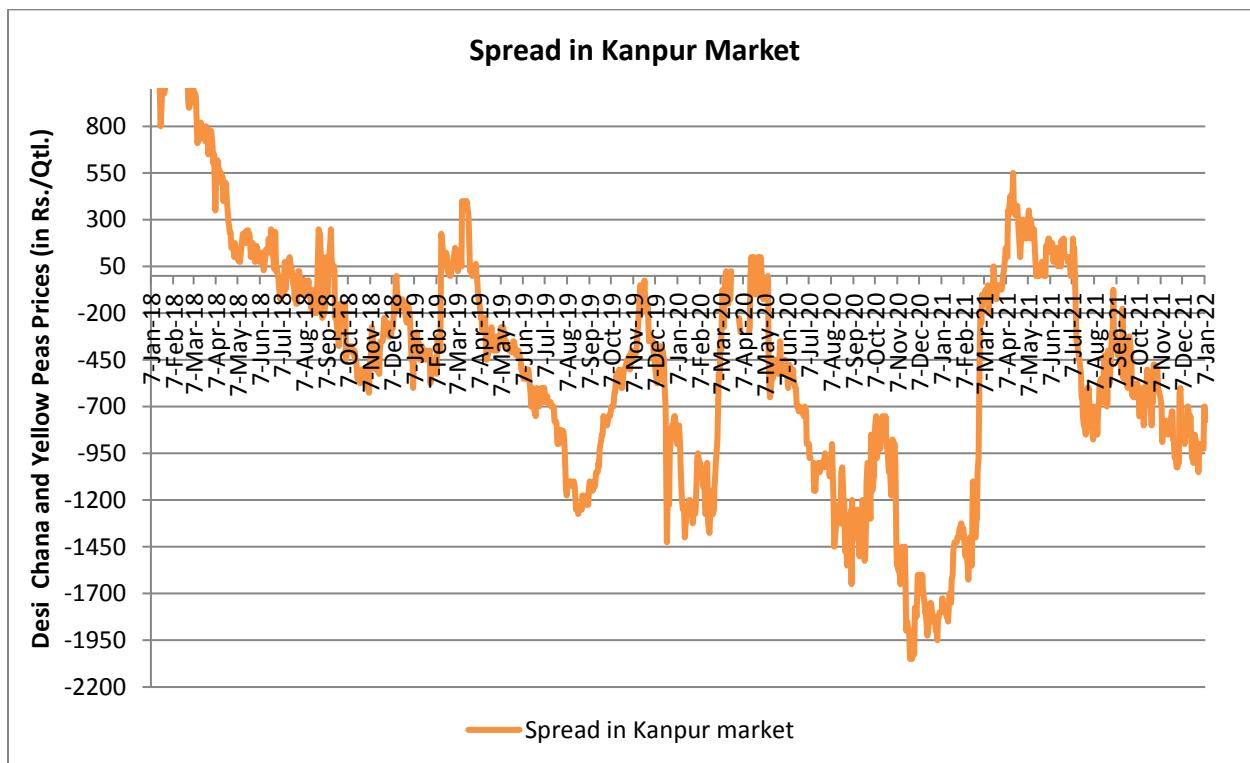

Govt is unlikely to free import this season too. Consumers have shifted to other dals available in domestic market at competitive prices. Prices of peas in Kanpur market has come down to 5900 from 6000 in the end of Dec. Under prevailing condition steady to slightly weak movement is expected.

#### **Price Dynamics:**

**Pea market is expected to trade steady to slightly weak in Jan-2022 due to:-**

- Shifting of bulk consumers from matar to Chana dal in domestic market
- New crop is almost 2 months away from now
- Green vegetables availability at affordable prices
- Favorable weather for the standing crops.

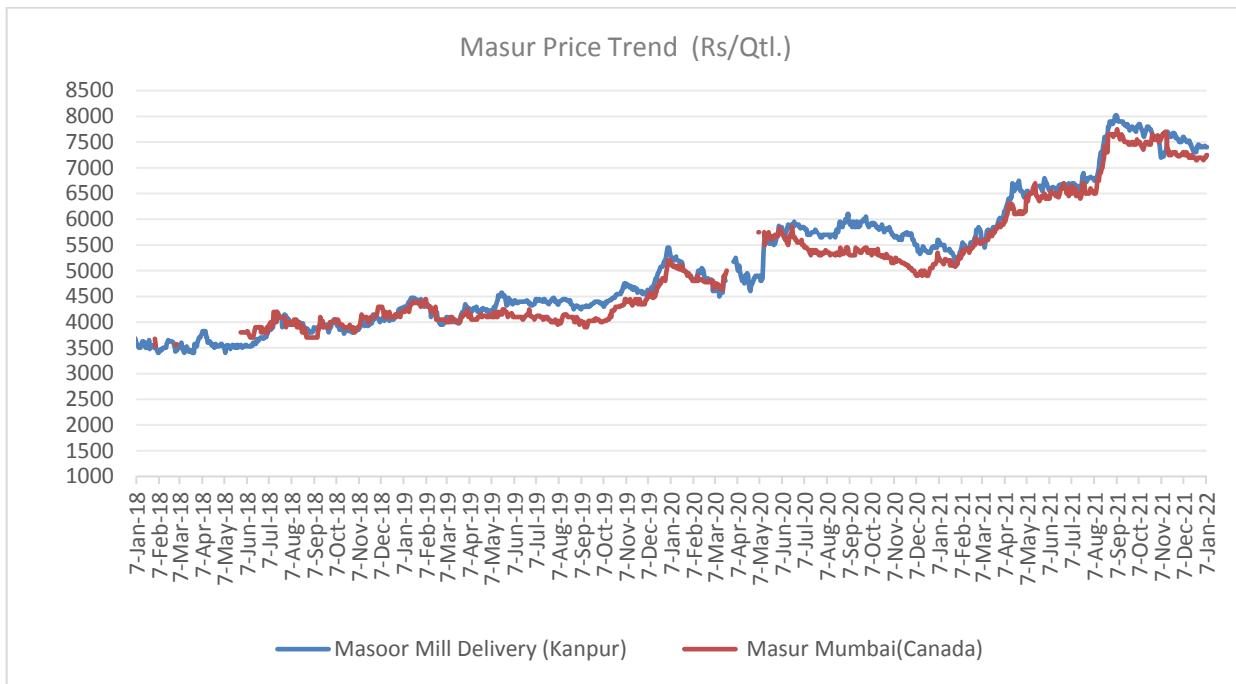

**Spread With Chana:**

*Spread between Chana and Peas, at Kanpur market continued to move in negative zone. The gap has decreased from minus 791 to minus 775 in Dec too. Spread is expected to remain in the negative zone in Jan too on relative movement in Chana prices.*

**Market Outlook For Jan:** Steady to slightly weak movement is expected.

**Masur (Lentils):**

As expected, area under Masur continued to recover smartly during the past four-five weeks and it increased by 0.44 lakh ha to 17.13 lakh ha. It is up by 2.64 % from last year same time. There is reports from Uttar Pradesh and Bihar that pea farmers have shifted some area from pea to Masur. As the Masur sowing season is almost over now, it may end with 17 to 17.25 lakh ha. Crop condition is good so far with higher area coverage, production size may improve from 11.91 to 13 lakh MT, given the normal weather condition so far. Decreasing temperature at night is good for the growth of standing crop. Demand for Masur and Masur dal has improved and its impact on price is visible once again. Prices of Masur are steady in Kanpur while imported Masur increased by 50 in Mumbai market to 7250. Arrival is coming from old stock despite slower pace of import. Supply from Canada would be tighter as the production estimate has been revised down to 16 .02 lakh MT from the previous 18.06 lakh MT. Favorable weather condition may cap uptrend in coming weeks.

**Price Trend In Cash Market:****Price Dynamics:**

In Dec-2021, average price in key market Kanpur was down to 7362 per qtl. in Dec from 7529 in Nov. Prices are likely to trade steady to slightly weak in Jan-2022.

**Steady to weak tone is expected in due to:**

- Higher area coverage
- Availability of imported stock at ports
- Govt.'s eye on market fluctuation
- New local crop 2 months away and

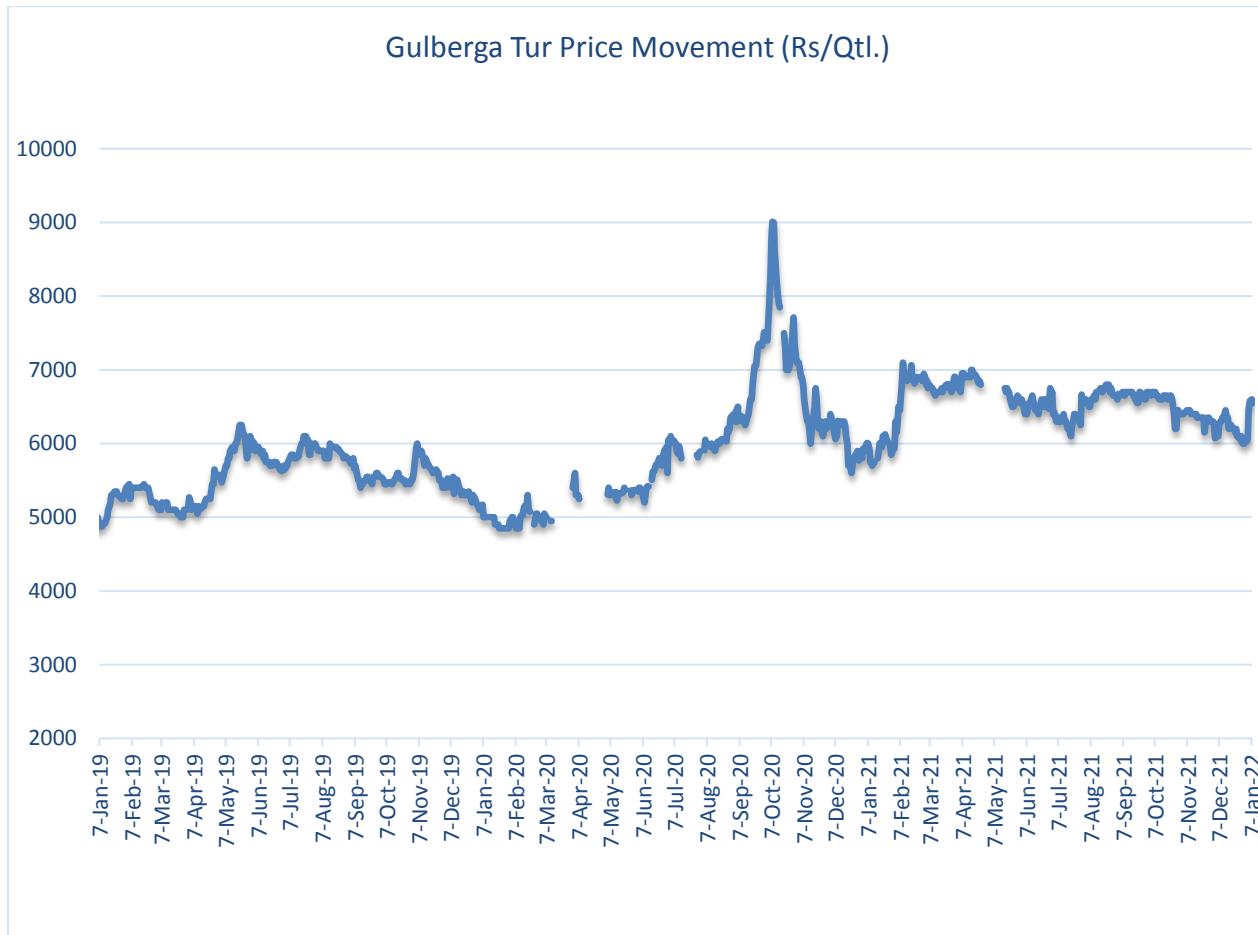

**Outlook fo Jan-2022:** Steady to slightly weak movement might be seen

**Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):****Fundamental Analysis and Outlook:****Market Recap:**

Yield realized from the new Tur crop in Maharashtra & Karnataka has increased fear of a smaller crop size than the normal expectation. Market participants expect it similar to last year. Quality of crop coming into markets is poor too. As per Agriwatch new estimate based on the arrival pattern in Karnataka and Maharashtra crop size may touch to 37.11 lakh MT against the previous estimate of 40.22 lakh MT. Yield realized by farmers is almost lower by 7% in Karnataka and 4% in Maharashtra. Its impact is visible in the market and the prices have moved up by 200 last week. It may further increase by 100-150 more in coming weeks. If bad weather condition affects standing crops in other states, it may push up price further. Prices

in Gulbarga market has moved up to 6450-6500 from 6300 last week. Lemon Tur in Mumbai too moved up from 5800 to 6100. CiF quotes in Myanmar too moved from \$725 to 785. Sentiments seem changing now as stockists/millers are active. So the overall tone seems firm now. Increasing price may affect procurement target for the current year.

#### Price Dynamics:

In Dec-2021, average price in Gulbarga market decreased by 2.5% to Rs 5950.

. Tur price in Dec is likely to trade firm due to:

- Delayed harvesting and crop loss due to rains at maturity stages.
- Likely commencement of procurement
- Improvement in demand due to marriage season
- Decreasing availability of old crop
- Low crop size

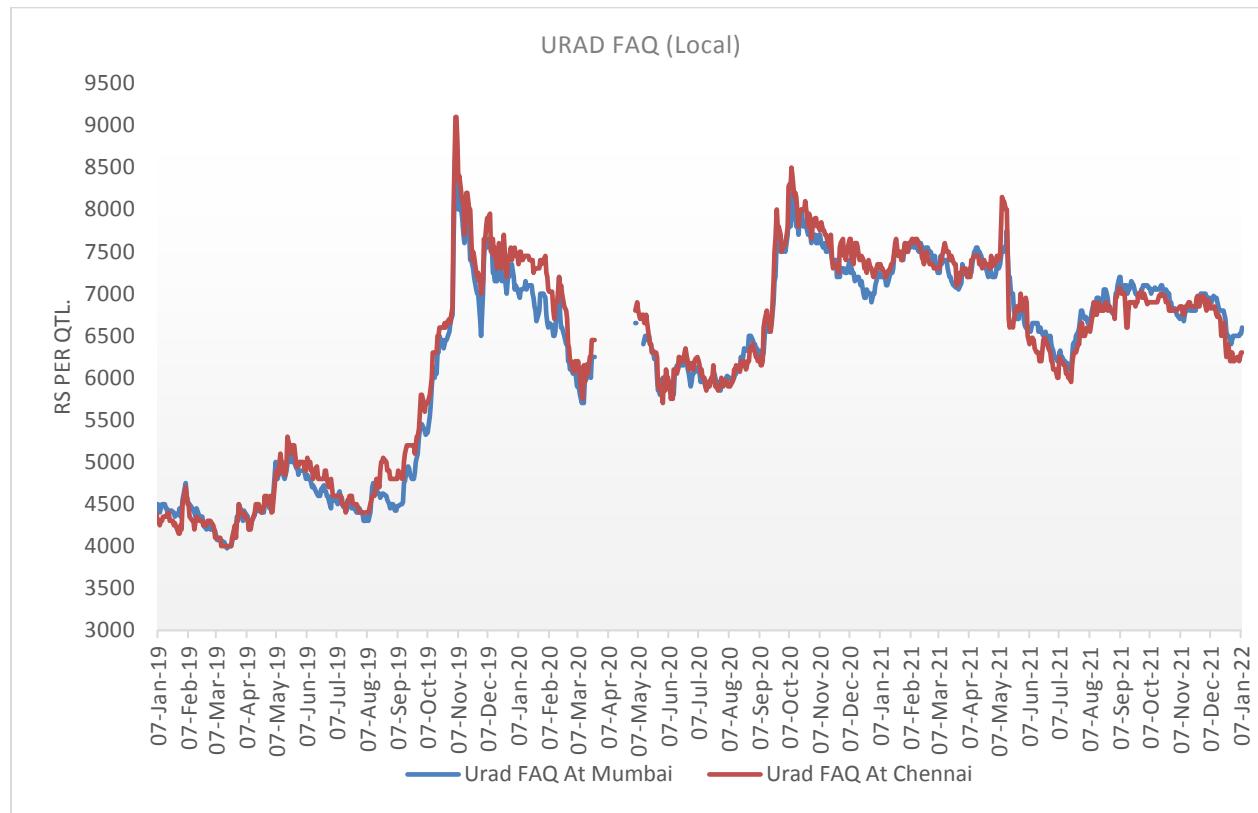

**Seasonality Index**-depicts steady to slightly firm tone.

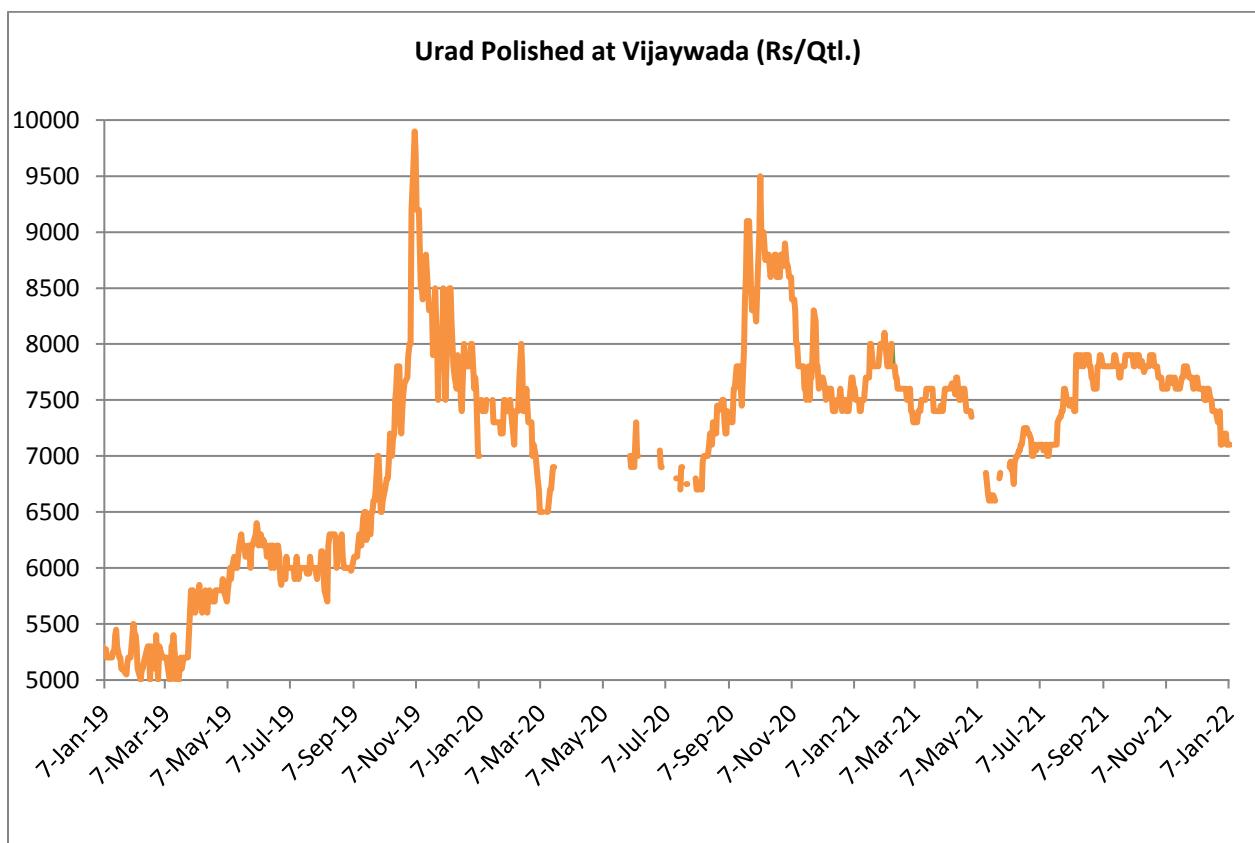

**Market Outlook for Jan-2022:**Improvement expected in Dec

***Urad (Black Matpe/Black Gram)******Fundamental Analysis and Outlook:******Market Recap:***

Rabi Urad sowing is still down by 9.04% to 6.34 lakh ha as on 7<sup>th</sup> Jan-2022. As sowing continues, improvement in area is expected. However, it may remain low from the last year. Normal rabi area is 9 lakh ha. As the demand has started increasing, prices may recover in coming weeks despite good flow of import and the bumper crop size expected in Myanmar this year. Myanmar may harvest over 6.50 lakh MT in 2022. So, availability for India seems good. Harvesting in Myanmar would start in February. Here in local market prices of Urad moved up by 100 to 6600 in Mumbai while it was traded at 6300 in Chennai. As availability would increase, unexpected spike is unlikely in the local market. Urad FAQ and SQ prices increased by \$40 to 45 per MT to 848 and 922 per MT respectively. More upward momentum is unlikely as the new crop is at hand now. Domestic crop from rabi crop too is expected by the end of Feb/March. Import flow, weather condition in Jan/Feb and the size of Rabi crop would be crucial for price direction in Jan and Feb.

As per government's sowing data released on 17th Sep-2021, Indian farmers have planted 39.43 lakh ha against the season's normal of 37.96 lakh ha and 38.65 lakh ha last year in Kharif season. In Chennai/Mumbai combined average monthly price decreased by 2.48 % to 6680 in Dec over Nov. Urad is being traded at Rs 6600 and In Mumbai at 6300 in Chennai. Sentiments remain weak as ample supply is expected from Myanmar in 2022.

**Seasonality Index** depicts steady to steady to slightly weak movement in Jan-2022.

**Price Dynamics:**

In Dec-2021, average prices in key markets including Mumbai/was down by 200 to 6450. Prices may stay steady to slightly weak in Jan due to:

- Good import flow
- Old available stock release in domestic market
- Rabi arrival from Feb likely
- Softening quotes in Myanmar

**Market Outlook for Jan-2022:** Prices are likely to trade steady to slightly weak.

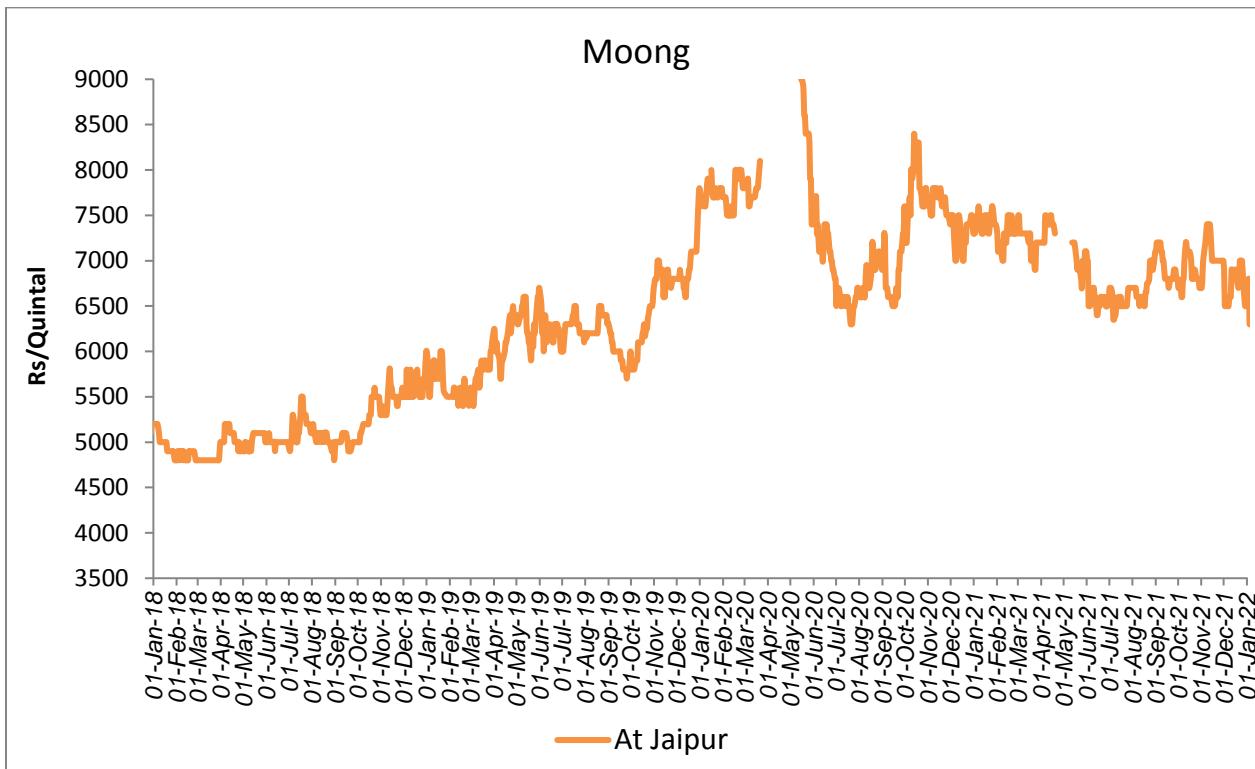

**Fundamental Analysis and Outlook For Moong:**

**Market Recap:**

Despite the slow recovery in Rabi area coverage, pressure on Moong price continues. Slack demand, availability of old and new stock amid continuous import are keeping price suppressed. Import would continue and would keep market well supplied. The government has already allowed the import of moong (green gram) to continue without quantitative restrictions under "free" category until March 31 next year. Besides, importers can continue to take physical delivery until June 30, 2022 if bill of lading is issued by March. In May 2021, Tur, Urad and Moong has kept into free import regime category till 31st October 2021. Rabi Moong has been sown on 2.67 lakh ha so far as compared to 4.34 lakh ha last year, down by 38.48%.

Normal area for Moong for Rabi and summer crops combined stands at 9.41 lakh ha. Supply side is at comfortable level and prices are expected to stay at current level (6000-6700) . In Jaipur market price is steady at 5800- 6500. Range bound movement is expected this week despite the low area coverage. Recovery may continue for Rabi area.

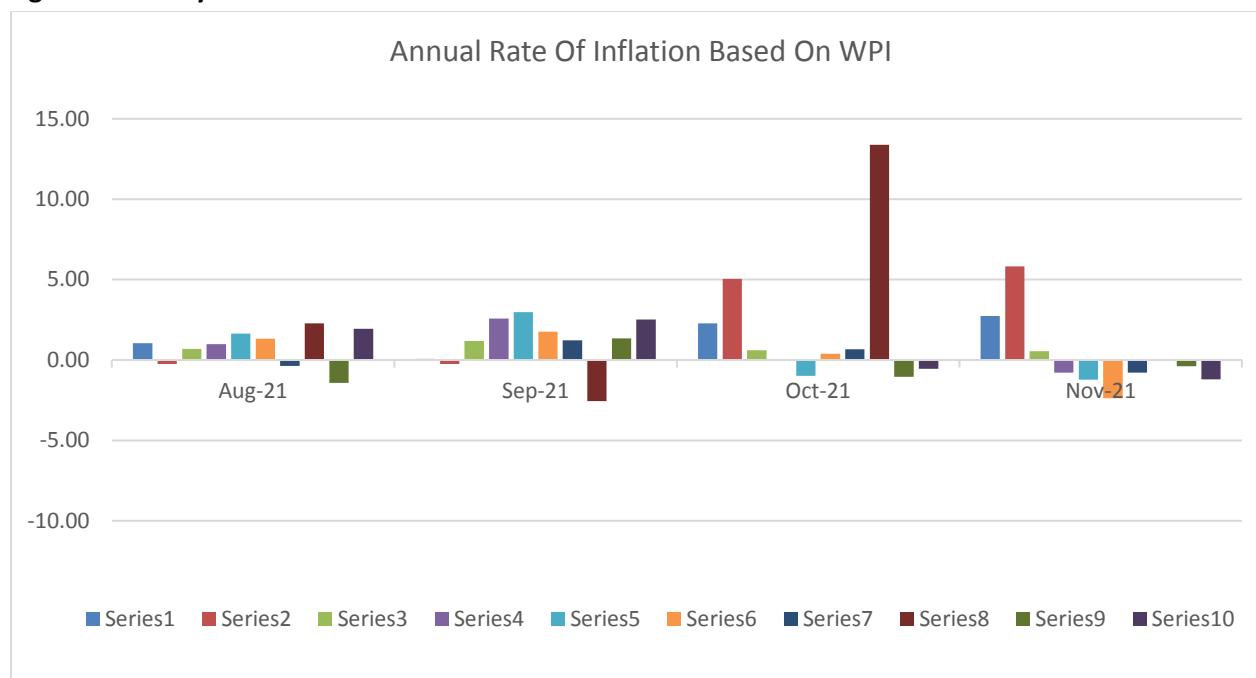

**Price Trend:****Market is expected to trade range bound in Jan due to:**

- Higher availability of inferior quality crop in the market
- increasing Import flow
- Weak demand from retail and wholesale sectors.
- Availability of stock in the central pool

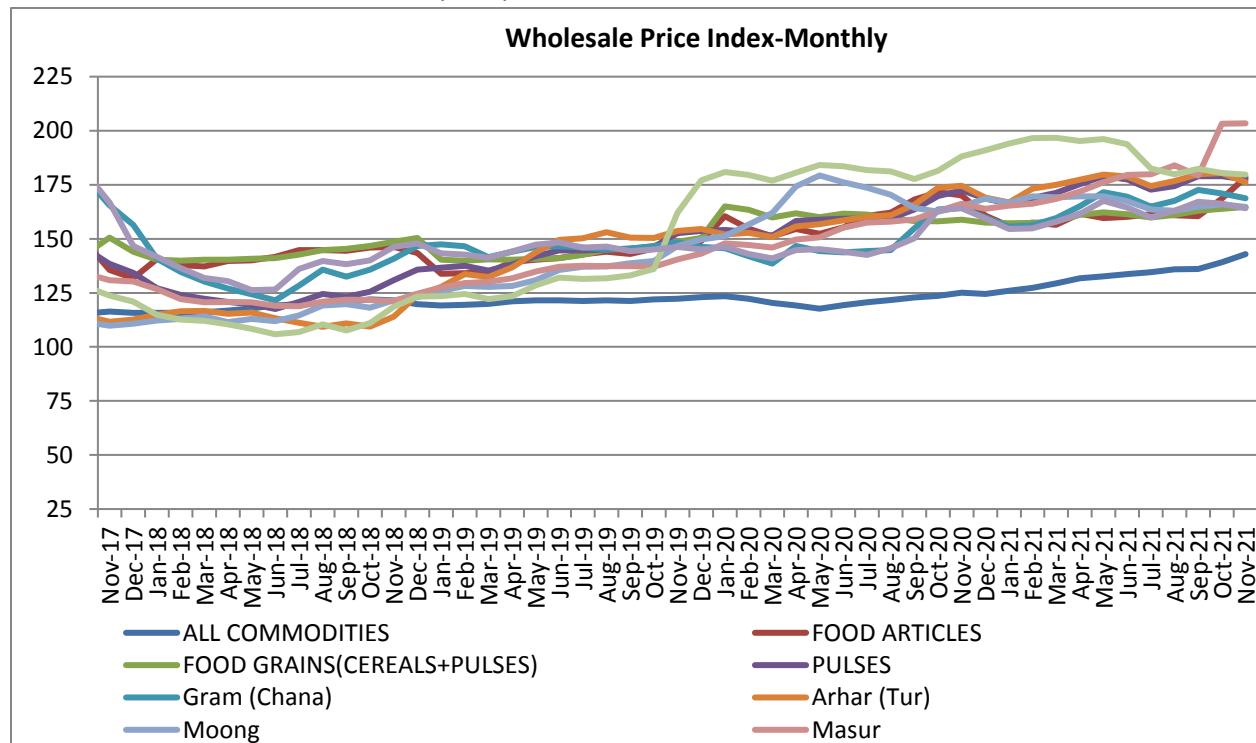

**Market Outlook for Jan-2022:** Range bound movement is expected

## Agri Commodity Indices Nov -2021:

Pulses WPI: Pulses WPI decreased by 1.4 points from 178.9 in Oct to 177.5 in Nov-2021
