- US

Pulses Sector-Highlights

Rabi sowing is over now except for Moong and Urad where it may continue till March to end -May under the summer season. Final Rabi sowing acreage for Chana and Masur is higher by 3.85 and 4.32% respectively this year despite the slower beginning and arrivals are expected to increase by mid-Feb. Arrivals of new Chana in Maharashtra and Masur in M.P. has been reported in limited quantities and quality wise condition of seed is good so far. Farmers have covered 168.27 lakh ha under pulses till 4th Feb-2022. Urad and Moong area stands at 8.17 and 5.13 lakh ha, down by 1.92 and 27 % respectively. Chana and lentil area stand at 114.27 lakh ha and 17.64 lakh ha. Weather condition is good so far and the prospect of bumper crop seems on the card under the prevailing weather condition. The inner tone in pulses market has weakened now. Availability from Rabi crops and the continuous import would ensure ample availability in domestic market and so, pressure on price might continue despite the ongoing procurement drive.

Sowing of Chana is over now and area is up by 3.85 % to 114.27 lakh ha despite less area coverage in major states like Rajasthan, Chhattisgarh, Jharkhand & Karnataka. Loss in area in these states was well covered by states like Maharashtra and Gujarat (up by 8.43 % & 34.45%) respectively. The overall price outlook indicates comfortable for consumers in the near to medium term as the crop size may exceed 104 lakh MT against 97 lakh MT last year. Apart from this, the import flow from the least developed countries increased to 2.06 Lakh MT in 9 months against 1.40 lakh MT last year. This year up to Mar-2022, total Chana import volume may increase to 3 lakh MT. The sluggish demand, continuous sale by Nafed below 4850 and the new arrivals in Mha and M.P., may continue to pressurize Chana cash market under normal weather condition. Supply side would continue to increase. In Bikaner Chana prices decreased by Rs 400 to 4700 during last one month. It may move down to Rs 4300-4500 by the end of Feb.

Despite the downward revision of Tur production to 37.11 from the previous AW estimate of 40.22 lakh MT for MY 2021-22, decreasing quotes in Myanmar to \$780 from \$805 during last 20 days, new arrivals, the good crop size (2.50 lakh MT) in Myanmar, likely the improved import volume in Feb & March may keep tur price under pressure and it may decrease further by Rs200. Buyers, mills & stockists are expected to start buying again in a couple of weeks and they may prefer to buy imported Tur, available abundantly at cheaper rate. The procurement drive may support market to some extent. Lemon Tur availability at 5950-6000 in Mumbai would continue to cap market price. If weather turns rough and extends its phase & damage matured crop standing at the fields in Gujarat, M.P., U.P., & Bihar, the declining trend may change. The import flow, weather condition and the expected buying activities are crucial and might be a price driving force in the coming weeks. The overall tone is steady to slightly weak in the short term. Crop of Tanzania Malawi and Mozambique is available in the range of Rs. 5400-5600 in Mumbai. The arrival pace is yet to pick up.

Urad cash market continued to trade under pressure as area continues to recover. Now it is 1.92% down from last year same time. Good import prospects from Myanmar and continuous release by stockists have weakened the inner tone in the market. Availability in Myanmar is expected to be over 6.5 -7.5 lakh MT, and the extended import timeline by India till June-2022 from the previous deadline of March-2022 would ensure ample availability in India. Apart from it, arrivals from the south Indian states are expected to start from the end Feb. The new crop from Myanmar too would hit India in March. So, the traders, stockists and

mills are very cautious to go for bulk buying. All these factors are pushing prices down. The price gap between the imported & local crops is contracting and it may settle and stabilize after a decline by 200- 300 more. Demand is yet to pick up. This year the local production has been pegged at 22.91 lakh MT crop against 24.19 lakh MT last year. The import volume may increase to over 5.25 lakh MT against 3.20 last year during Aug to Jul (MY). The overall tone seems steady to slightly weak in Feb. Prices decreased in Mumbai by 7.5 % to Rs 5900 and Chennai by Rs 8% 5700 last week. It may touch to Rs5400-5500

Masur cash market continued to trade southward direction and it may continue. New arrival has started in M.P. in limited quantity. Area coverage is up by 4.32% and quality of new crop coming into markets are good. As crop condition is good so far, bumper production (13 LMT) is expected this year under the normal weather condition. The arrival is expected from end February this year, the declining movement might be limited during couple of weeks. Stockists are expected to start releasing old stock before the new crop hits the market. Apart from this, the production forecast for Canada lentils for 2022-23 has been increased to 25 lakh MT against 16.06 lakh MT in 2021-22 in the initial estimate of Agriculture and Agri-Food Canada (AAFC). Stock at Indian ports are around 2 lakh MT while around 45 thousand is expected in Feb-2022. So supply side is likely to be in comfortable zone and it will limit any upward momentum in coming weeks. This week market traded down by 4.58% to 6575 in Indore while the other market eased proportionally. Under prevailing condition spike in Lentil market is unlikely until and unless weather turns rough in the major growing regions. AAFC has projected average yearly price to decrease to \$725 per MT in 2022-23 from \$1080 in 2021-22. In Kanpur market it traded down by Rs 200 to 7100. Under the prevailing condition prices of Masur may decrease by 800-1000 by the end March and may touch 6200-6400 from the current level.

Despite the slow recovery in Rabi area coverage, pressure on Moong price continues. Slack demand, ample availability of stock with Nafed (over 3 lakh MT old and new) and continuous imports are keeping prices suppressed. Forward trade in Tanzania has been struck at 5600-5700 and it would hit Indian market in March. By then the Rabi crop, followed by the summer crop, too would start. Import would continue and would keep market well supplied. Supply side is at comfortable level and prices are expected to stay at current level (6000-6800). Downward movement is expected this week too and market may decrease by 200 from the current level. Availability of poor quality Moong in domestic markets, import flow, good availability in Myanmar and the restricted buying by mills would continue to pressurize Moong market despite good quantity (around 1.6 lakh MT (kharif new)) purchased by Nafed. Prices of Moong may slip by 100-200 more from the current level. FAQ quality is being traded at 6700 in Indore.

Global Market Updates:

Canada Agriculture & Agri Food Canada has published its preliminary production forecast for 2022-23 on 21st Jan-2022 for Lentil, Chickpea and Field Pea. As per the latest forecast Lentil production may increase by 55.66 % to 2.5 MMT in 2022-23 against 1.60 MMT in 2021-22. The likely yield realization has been increased to 1.41 tonne per ha for 2022-23 against 0.91 tonne per ha in 2021-22. It may have a softening impact on the global Lentil markets in the medium to long term.

The production forecast for Field Pea (Dry Peas) too is up by 48.55 % to 3.8 MMT for 2022-23 against 2.58 MMT in 2021-22. Yield forecast has been increased to 2.36 tonne per ha for 2022-23 against 1.51 toonne

per ha in 2021-22. The severe drought condition had affected all pulses yield last year. The higher production prospects may cap upward movement in the global market in the medium term.

The initial production forecast for Chickpeas for 2022-23 too has been increased by 64.47% to 125 thousand MT against 76 thousand MT last year. Yearly average price forecast to has been revised down to \$860 per MT in 2022-23 against \$1065 for 2021-22. Yield has been revised up to 1.51 tonne per ha for 2022-23 against 1.04 toonne in 2021-22

According to latest update from Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES) Chickpea production in Australia is estimated as 10.04 lakh tonnes for 2021-22 as compared to last year's production of 7.33 lakh tonnes. Area under Chickpea has been increased this year in Australia from 5.07 lakh ha to 6.33 lakh ha.

According to latest update from Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES) lentils production in Australia is estimated as 6.56 lakh tonnes for 2021-22 as compared to last year's production of 6.34 lakh tonnes. Area under lentils this year stands at 3.9 lakh ha as compared to last year's acreage of 3.68 lakh ha.

Global Lentils market continues to ease due to weak seasonal demand in the domestic as well as international markets. The difference between Green and Red lentils is widening and it has gone up to \$260 per MT against \$116 last season. This means supply side of green Lentils would continue to be tight in coming months. Availability of Australian crop has increased and the pressure seems to continue on Red Lentils price.

The production estimates for the Australian pulses has been published. As per the latest estimates Australian would harvest 8.44 lakh MT Chickpeas in 2021-22 (Abares estimate) while Pulses Australia sees it at 8.70 lakh MT. The 10 years production average is 7.89 lakh MT. Chickpeas availability in the global market would increase and it may ensure stability in price in the global market.

As per the latest Abares estimate Lentils production in Australia pegged at 6.39 lakh MT in 2021-22. The Pulses Australia sees it at 7.10 lakh MT. The 10 year's average production for Lentils is 4.24 lakh MT. Indian buyers may take interest in Australian Lentils. No deals has been struck so far. However, containers issue and higher freight would keep the import costing high in 2022 too. Major growing states like Queensland and northern NSW, containers availability is still low, and no path to bulk export exists because shipping slots are fully booked. This means scope for immediate export in bulk volume is limited. Prices have come down to a certain extent and growers may prefer to hold stock for better price.

The Field Peas production in Australia may decrease from 10 years average of 2.8 lakh MT to 2.5 lakh MT in 2021-22, as per the latest fig. published by Abares. Australia Pulses sees it at 3.20 lakh MT. Export demand for the Australian Peas may increase as availability in Canada is down while prices are ruling higher. Malaysia & China would continue to import peas from Australia.

The IGC is going to include Lentils, Chickpeas and Dry beans in the Council's definition of grains under Article 2(1) (e) of the grains Trade Convention. This means that now the IGC secretaria will expand its market information for Pulses. Actually, pulses trades are continuously increasing throughout the world and has expanded with good pace and reached at 16 to 17 million MT in last 5 years. Right now the IGC is providing updates on Pulses trade and production estimates in the Grain Market Report on a bimonthly basis. Apart from it S&D balances are published for major exporters for Pulses like Lentils, Dry Peas and Chickpeas. Now FoB prices matrix too would be included.

Monthly Outlook: -Pulses are likely to trade weak During Feb.

*AW estimates

Note (For Chana and Masur crop year is 2020-21 and to be marketed in FY 2021-22)

Marketing year (Urad: Aug to July, Moong: July to June, Tur: Dec to Nov. Chana: March to Feb and Masur: March to Feb) AW kharif 4th Adv. production estimate for Tur, Moong & Urad published and Preliminary estimate s for Chana and Masur.

Kharif Pulses:

Urad: Agriwatch has estimated 23.42 lakh MT Urad production in 2021-22 including 17.65 lakh MT in Kharif season. Import volume would increase due to free import policy till Dec-2021 and the consignment would be allowed to hit Indian ports till Jan-. New crop has already started. Carryout would decrease slightly due to quality and yield loss in Kharif season.

Moong: Moong production has been pegged at 22.98 lakh MT including rabi. Kharif Moong production has been pegged at 15.75 lakh MT. Import may increase to 1.75 lakh MT .Import is free. If parity turns in favour of Indian importers, import may continue. As carryout is low, price may continue to rule at higher level, supported by the higher MSP. Procurement has already been started from 1st Nov-2021.. Carryout would slightly increase due to higher import flow.

Tur: AW has published its final. Production estimates for Tur for 2021-22 and expects it to stay at 37.11 lakh MT, slightly lower than last year. Bad weather condition during growth stages hampered the normal yield. As availability would decrease, prices may move up again as soon as arrival pressure decreases.

Rabi Pulses:

Chana: Agriwatch has pegged Chana production at 103.46lakh MT for crop year 2021-22 while Masur at 12.91 lakh MT, despite delayed sowing. Supply side would increase to 124.95 for Chana this year.

Masur: AW preliminary estimate for Masur pegged at 12.91 LMT for 2021-22, slightly higher than last year. If weather condition remains favorable, production may increase further. New crop in India comes in Feb end.

Chana (Chickpeas /Bengal Gram):

Market Recap:

Chana cash market is likely to move down by 200-300, taking cue from bumper production size and weak offtake from mills. Farmers have covered 114.95 lakh ha so far, it was up by 4.48 % from the last year. Sowing of Chana is over now. Demand for Chana dal and besan is still stable, which was expected from mid of Nov earlier. New arrival has already started and It may keep price suppressed in Feb and March. Nafed has old stock and higher carryout would cap spike in Chana market. Import continues and in Nov –Dec India imported 45651.78 & 23251.23 MT respectively. Total import have gone up to 1.23 lakh MT from April to Dec-2021. Availability is bound to increase so weak trend may prevail despite the planning of procurement through govt. channels at MSP.

If weather remains favorable India is going to harvest over 103 lakh MT this year, considered to be ample for the domestic consumption. However, weather conditions in Feb and Mar are very crucial and it has potency to direct price either way up & down. At prevailing condition price may decrease by 200-300 from the current level. Following graph illustrates Chana price movement in different markets:

Price Dynamics: Prices are likely to trade steady to slightly weak in Feb-2022 due to:

- New arrivals and bumper production prospects
- Weak demand for besan and dal
- Release of old stocks by private trades and NAFED
- Improvement in Dal and besan demand due marriage season.
- Import flow from the least developed countries.

Seasonality Index: hints steady to slightly weak movement for the local spot market in Feb -2022.

Area: Lakh Ha Source: Govt. of India

Field Pea (Matar/Dry Pea):**Fundamental Analysis and Outlook:**

Pea's prices in domestic market decreased by 100 to 5900-6000 in Jan-2021 over Dec. New arrival has already started. It may decrease further despite low area coverage by 1.93 % to 10.18 lakh ha. Sowing season is over now. New arrival may ease supply side and pressurize the market. Apart from it weak demand too would check prices of matar in local markets. Inner tone remains weak.

Govt is unlikely to free import this season too. Consumers have shifted to other dals available in domestic market at competitive prices. Prices of peas in Kanpur market has come down to 5800 from 6000 in the end of Jan. Under prevailing condition steady to slightly weak movement is expected.

**Price Dynamics:**

Pea market is expected to trade steady to slightly weak in Feb-2022 due to:-

- Shifting of bulk consumers from matar to Chana dal in domestic market
- New arrivals
- Green vegetables availability at affordable prices
- Favorable weather for the standing crops.

Masur (Lentils):

Crop condition is good so far with higher area coverage, production size may improve from 11.91 to 13 lakh MT, given the normal weather condition so far. Decreasing temperature at night is good for the growth of standing crop. Demand for Masur and Masur dal has improved and its impact on price is visible once again. Prices of Masur are decreasing in Kanpur and Mumbai. Accumulated imported stock and new arrival may pressurize market to go down by Rs500-800 in coming weeks. Supply side from Canada would improve this year too.

Price Trend In Cash Market:

Price Dynamics:

In Jan-2021, average price in key market Kanpur was down to 7200 per qtl. in Jan from 7450 in Dec. Prices are likely to trade steady to slightly weak in Feb-2022.

Steady to weak tone **is expected in due to:**

- Higher area coverage/new arrival
- Availability of imported stock at ports
- Ample stock at ports

Outlook fo feb-2022: Steady to slightly weak movement might be seen

Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):

Fundamental Analysis and Outlook:

Market Recap:

Lack of demand, improved arrival flow, availability of old stock and the extended timeline for import would not allow Tur to move up soon. Other pulses too are ruling down and its impact is visible on other pulses too. Apart from it, the bumper Rabi production prospect for Chana and Masur may continue to cap uptrend in Pulses market. Buyers/stockists are very watchful and engaged in limited purchase. Tur in Gulbarga market is being traded in the range of Rs 6000-6500 per qtl. Prices are expected to rule in the range of Rs 5500-6500, depending on quality of the crop. The crop size is definitely higher than what private trade expects. Farmer's holding is higher this year as they expect price rise June onward.

**Price Dynamics:**

In Jan-2021, average price in Gulbarga market decreased by 2.5% to Rs 6050.

. Tur price in Dec is likely to trade weak due to:

- Improving arrivals
- Likely good import flow
- Availability of old stock and its release from stockists
- Weak demand

Seasonality Index-depicts steady to slightly weak tone.

Market Outlook for Feb-2022: weak tone may prevail

Urad (Black Matpe/Black Gram)**Fundamental Analysis and Outlook:****Market Recap:**

Continuous improvement in Rabi Urad area and a good import prospect from Myanmar has continued to suppress the prevailing inner tone in the Urad cash market. Farmers have covered 8.16 lakh ha area under Urad this year so far, down by 1.99 % from last year till 4th Feb 2022. Sowing has got delayed by 15-20 days and will be done by mid of Feb. As sowing has got delayed, it may limit acreage increase by 4 to 5% despite attractive prices prevailing in the market. Import flow too has been low amid tight supplies and quality loss in the Kharif season. Also demand is weak. So, prices may trade steady to slightly weak this week too. FAQ Urad is being traded at Rs. 6100-6150 per qtl. in Mumbai market while in Chennai local crop is being traded at Rs. 5950 per quintal. If demand improves then prices may recover (unlikely this week). Myanmar is offering Urad FAQ at \$805, down by \$5 from last week and offering SQ at \$895 which is down by \$20 as compared to the last week.

India imported around 4.61 MT Urad in from April to Dec-2021 and 1.00 LMT is expected in Feb & Mar-2022. It would keep supply side at comfortable level. Government has extended the free import policy of Urad with bill of lading dated on or before 31st Mar 2022 and import should be cleared from customs on or

before 30th June 2022. Import is free now, so when parity turns in favour of India, the volume of import may increase.

Seasonality Index depicts steady to steady to slightly weak movement in Jan-2022.

Price Dynamics:

In Jan-2021, average prices in key markets including Mumbai/was down by 500 to 6000-6100. Prices may stay steady to slightly weak in Feb due to:

- Good import flow
- Old available stock release in domestic market
- Rabi arrival from Feb likely
- Softening quotes in Myanmar

Market Outlook for Feb-2022: Prices are likely to trade steady to slightly weak.

Fundamental Analysis and Outlook For Moong:

Market Recap:

As of now Moong sowing is less and got delayed due to excess soil moisture in southern part of the country due to rains during start of the sowing season. Rabi Moong has been sown on 4.77 lakh ha so far as compared to 6.61 lakh ha last year. Normal area for Moong for Rabi and summer crops combined stands at 9.41 lakh ha. If weather conditions will be bad continuous in Feb also then it may affect Rabi sowing of Moong. Prices in Jaipur market are ruling in the range of Rs. 6000 to 6500 per qtl, depending on the quality of the crop.

Mills are not buying in bulk volume as demand for dal is weak. Import flow would continue due to Moong being in the free import list till March-2022. Imports may continue to land at Indian ports till January 2022 as per the extended time frame for import. Myanmar is offering Moong Anna Shewar at \$880 and Moong Pedi Shewar at \$875 and Pokako at \$980 per MT. Apart from it Nafed has around 3.4 LMT Moong and is in a position to control Moong price as and when prices move up. Price of Moong (FAQ) stayed steady in Indore

at Rs 6800, down by 1.41% in Delhi to 7000. However in Jalgaon the decline was higher by 3.55% to Rs 6800. Moong market is likely to remain steady to slightly in Feb -2022

Price Trend:

Market is expected to trade range bound in Jan due to:

- Higher availability of inferior quality crop in the market
- increasing Import flow
- Weak demand from retail and wholesale sectors.
- Availability of stock in the central pool

Market Outlook for Jan-2022: Range bound movement is expected

Agri Commodity Indices Dec -2021:

Pulses WPI: Pulses WPI decreased by 2.4 points from 177.5 in Nov to 175.1 in Dec-2021
