### Pulses Sector-Highlights

**Pulses market continued to recover as expected in the end Feb due to ongoing conflict between Russia and Ukraine despite the increasing arrivals in India from local Rabi crops. The conflict may continue for longer time and the supply chain is disrupted as the NATO group of countries have started imposing sanction on Russia and a new geo-politic scenario is emerging. It may continue to affect the supply-demand chain in coming months. All pulses except Masur have shown firm movement. The involvement of other countries may add fuel to the fire on commodity prices world-wide as the supply chain would remain disrupted.**

**Summer Urad sowing has started gaining momentum in states like West Bengal and Tamil Nadu despite 20 % low area coverage in Karnataka and Assam. Farmers have covered 0.858 thousand ha as on 04<sup>th</sup> March-2022. It is up by 20 % from the last year same time. The normal area under summer Urad is 1.48 lakh ha. The major growing states are M.P., Assam and Uttar Pradesh. Farmers have covered 1.163 lakh ha under summer Moong so far, up by 13.57 % from 1.024 lakh ha last year same time.**

**Arrivals, especially Bengal Gram, Lentil and Peas have started increasing in various markets and would continue to increase in coming weeks. So the upward momentum in these pulses might be capped in March. After Holi arrival may increase further while demand may decrease.**

**Govt may extend the date of Urad and Tur import from Myanmar if prices continue to move up. The fear of price rise has started surfacing its head again due to the ongoing conflicts between Russia and Ukraine, increasing fuel cost and issues with logistics. The BL date (right now is 31<sup>st</sup> March-2022), might be extended for three months. Dal prices in physical market have increased by 6 to 8 % during 10 days. If the BL date is extended, it may have a cooling impact on Urad and Tur prices in domestic markets. A MoU with Myanmar had been signed on the 4th week of June-2021 for importing 2.5 lakh MT of Urad and one lakh MT of Tur every year for five years, starting from 2021-22 to 2025-2026 (April-March).**

**Arrivals have started increasing in various markets and would continue to increase in coming weeks. Sowing of Chana is over now and it stands at 114.27 lakh ha, up by 4.48 %, despite less area coverage in major states like Rajasthan, Chhattisgarh, Jharkhand & Karnataka. The overall price outlook indicates comfortable for consumers in the near to medium term as the crop size may exceed 104 lakh MT against 97 lakh MT last year. Apart from this, the import flow from the least developed countries increased to 2.25 Lakh MT in 11 months against 1.65lakh MT last year. This year up to Mar-2022, total Chana import volume may increase to 3 lakh MT. Improvement in demand, likely procurement drive from mid-March may support cash market to some extent at the current level. Weather condition is normal so far. Supply side would continue to increase. In Bikaner Chana prices trade firm at Rs 5000 during last two weeks. It may increase further by Rs 100-150 soon. MSP of Bengal Gram is 5230 per 100 kg. The procurement drive too is lending support to cash Chana market.**

**Tur cash market traded up due to the increased quotes in Myanmar and active buying activities by mills just ahead of Holi. Tur prices in various markets increased by 1 to 2.5 % in A.P. and M.P.,s markets while it traded slightly down in Gulbarga and Mumbai markets. The highest increase was seen in Indore markets where it moved up by 200 to Rs 6600. In Gulbarga market it is being traded at Rs 6650. As per Agriwatch estimates, crop size of Tur is 37.11 lakh MT, revised down from 40.22 lakh MT. Quotes in Myanmar has gone up to \$825, up by \$20 from last week. Freight has gone up due to the increasing fuel price and other**

*logistic issues due to the ongoing conflicts between Russia and Ukraine. Availability is good in Myanmar and African countries. So, sudden spike is unlikely. Buyers, mills & stockists have started buying again and it may lend support at the current level. The import flow, weather condition, the ongoing conflicts in the Black Sea region are crucial and have the potency to change the prevailing undertone. The overall tone is steady to slightly firm in March.*

***Urad cash markets continued to recover during last weeks. It moved up by Rs 150 to Rs 6450 in Mumbai market and Rs 100 to 6300 in Chennai market. Recovery in Urad cash market is unlikely to continue despite the quotes in Myanmar continue to increase. It has increased by \$15 to \$795 per MT during last 8 days. Notably, Myanmar is harvesting bumper crop this year and the export availability is said to be around 7 to 7.5 LMT. It will continue to pressurize Urad market in the local market. If the current import policy continues, import would continue to take place till June-2022. Apart from it, arrivals from the south Indian states are expected from the next week. So, the traders, stockists and mills are very cautious to go for bulk buying. All these factors may cap uptrend. The price gap between the imported & local crops is contracting and it may settle and stabilize near Rs6200-6600, depending on the quality of the crop. Demand has started picking up due to festive demand. This year the local production has been pegged at 22.91 lakh MT crop against 24.19 lakh MT last year. The import volume may increase to over 5.25 lakh MT against 3.20 last year during Aug to Jul (MY). The overall tone seems steady to slightly firm in March.***

***Despite the downward correction in cash masoor markets and good production prospects, prices are still ruling above MSP and it may continue to rule above MSP the entire year too. Sensing the tight supply side and the high prevailing price in the global markets, the Ministry of Commerce and Industry has extended the import time line on Zero duty from Canada & Australia to 30<sup>th</sup> Sep-2022. Earlier the zeroduty time line was 31<sup>st</sup> March-2022. The duty on US origin Lentil would be 11% now. It may cap the possibility of any upsurge in the market. Masur in Kanpur market traded down by 4.96 % to 6700 while in Mumbai market it traded down by 3.68 % to 6550. It may move down to 6300-6400 in the coming weeks. Arrivals have started increasing and after Holi prices might decrease to 6300-6400 level. As crop condition is good so far, bumper production (13 LMT) is expected this year under the normal weather condition. Stockists have started releasing old stock. Apart from this, the production forecast for Canada lentils for 2022-23 has been increased to 25 lakh MT against 16.06 lakh MT in 2021-22 in the initial estimate of Agriculture and Agri-Food Canada (AAFC). Stock at Indian ports are above 2 lakh MT while around 45 thousand is expected in end Feb-2022. So, supply side is likely to be in comfortable zone and it will limit any upward momentum in coming weeks. AAFC has projected average yearly price to decrease to \$725 per MT in 2022-23 from \$1080 in 2021-22. Sentiments remain weak.***

***Moong market could not maintain its firm momentum as the import flow from Myanmar at very competitive price during Dec and Jan, ample stock (over 3 lakh MT) in the central pool and the depressed prices in Indian markets encouraged Ministry of Commerce and Industry to place Moong from Free to restricted import list from immediate effect. Stock availability is good and the Rabi arrival is expected from this week. It would continue to check cash market movement despite restricted import. There was a fear in the market that if prices continue to rule below MSP by Rs600-1000, farmers may reduce area in Kharif season. Right now, availability is good and the current move may support Moong market to some extent.***

Supply side is at comfortable level and prices are expected to stay at current level (6000-6800). With this move the declining trend in the market may stop. Prices in Jaipur Market were quoted in the range of Rs6000-6600.Demand is weak and the summer area is running up by 13.57 % to 1.16 lakh ha. It is likely to pick up from the next week.

#### Global Market Updates:

**Canada Agriculture & Agri Food Canada has published its preliminary production forecast for 2022-23 on 18 Feb -2022 for Lentil, Chickpea and Field Pea.** As per the latest forecast Lentil production may increase by 55.66 % to 2.5 MMT in 2022-23 against 1.60 MMT in 2021-22. The likely yield realization has been increased to 1.41tonne per ha for 2022-23 against 0.91 tonne per ha in 2021-22. It may have a softening impact on the global Lentil markets in the medium to long term.

**The production forecast for Field Pea (Dry Peas) too is up by 48.55 % to 3.8 MMT for 2022-23 against 2.58 MMT in 2021-22. Yield forecast has been increased to 2.36 tonne per ha for 2022-23 against 1.51 toone per ha in 2021-22.** The severe drought condition had affected all pulses yield last year. The higher production prospects may cap upward movement in the global market in the medium term.

**The initial production forecast for Chickpeas for 2022-23 too has been increased by 64.47% to 125 thousand MT against 76 thousand MT last year.** Yearly average price forecast to has been revised down to \$860 per MT in 2022-23 against \$1065 for 2021-22.Yield has been revised up to 1.51 tonne per ha for 2022-23 against 1.04 toonne in 2021-22

**According to latest update from Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES)** Chickpea production in Australia is estimated as 10.04 lakh tonnes for 2021-22 as compared to last year's production of 7.33 lakh tonnes. Area under Chickpea has been increased this year in Australia from 5.07 lakh ha to 6.33 lakh ha.

**According to latest update from Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES)** lentils production in Australia is estimated as 6.56 lakh tonnes for 2021-22 as compared to last year's production of 6.34 lakh tonnes. Area under lentils this year stands at 3.9 lakh ha as compared to last year's acreage of 3.68 lakh ha.

**The production estimates for the Australian pulses has been published. As per the latest estimates Australian would harvest 8.44 lakh MT Chickpeas in 2021-22** (Abares estimate) while Pulses Australia sees it at 8.70 lakh MT. The 10 years production average is 7.89 lakh MT. Chickpeas availability in the global market would increase and it may ensure stability in price in the global market.

**As per the latest Abares estimate Lentils production in Australia pegged at 6.39 lakh MT in 2021-22.** The Pulses Australia sees it at 7.10 lakh MT.The 10 year's average production for Lentils is 4.24 lakh MT. Indian buyers may take interest in Australian Lentils. No deals has been struck so far. However, containers issue and higher freight would keep the import costing high in 2022 too. Major growing states like Queensland and northern NSW, containers availability is still low, and no path to bulk export exists because shipping slots are fully booked. This means scope for immediate export in bulk volume is limited. Prices have come down to a certain extent and growers may prefer to hold stock for better price.

**The Field Peas production in Australia may decrease from 10 years average of 2.8 lakh MT to 2.5 lakh MT in 2021-22, as per the latest fig.** published by Abares. Australia Pulses sees it at 3.20 lakh MT. Export demand for the Australian Peas may increase as availability in Canada is down while prices are ruling higher. Malaysia & China would continue to import peas from Australia.

**Weekly Outlook:** - Mixed tone may prevail in March.

\*AW estimates

**Note (For Chana and Masur crop year is 2020-21 and to be marketed in FY 2021-22**

**Marketing year** (Urad: Aug to July, Moong: July to June, Tur: Dec to Nov. Chana: March to Feb and Masur: March to Feb) AW kharif 4th Adv. production estimate for Tur, Moong & Urad published and Preliminary estimate s for Chana and Masur.

#### Kharif Pulses:

**Urad:** Agriwatch has estimated 23.42 lakh MT Urad production in 2021-22 including 17.65 lakh MT in Kharif season. Import volume would increase due to free import policy till Dec-2021 and the consignment would be allowed to hit Indian ports till Jan-. New crop has already started. Carryout would decrease slightly due to quality and yield loss in Kharif season.

**Moong:** Moong production has been pegged at 22.98 lakh MT including rabi. Kharif Moong production has been pegged at 15.75 lakh MT. Import may increase to 1.75 lakh MT .Import is free. If parity turns in favour of Indian importers, import may continue. As carryout is low, price may continue to rule at higher level, supported by the higher MSP. Procurement has already been started from 1<sup>st</sup> Nov-2021.. Carryout would slightly increase due to higher import flow.

**Tur:** AW has published its final. Production estimates for Tur for 2021-22 and expects it to stay at 37.11 lakh MT, slightly lower than last year. Bad weather condition during growth stages hampered the normal yield. As availability would decrease, prices may move up again as soon as arrival pressure decreases.

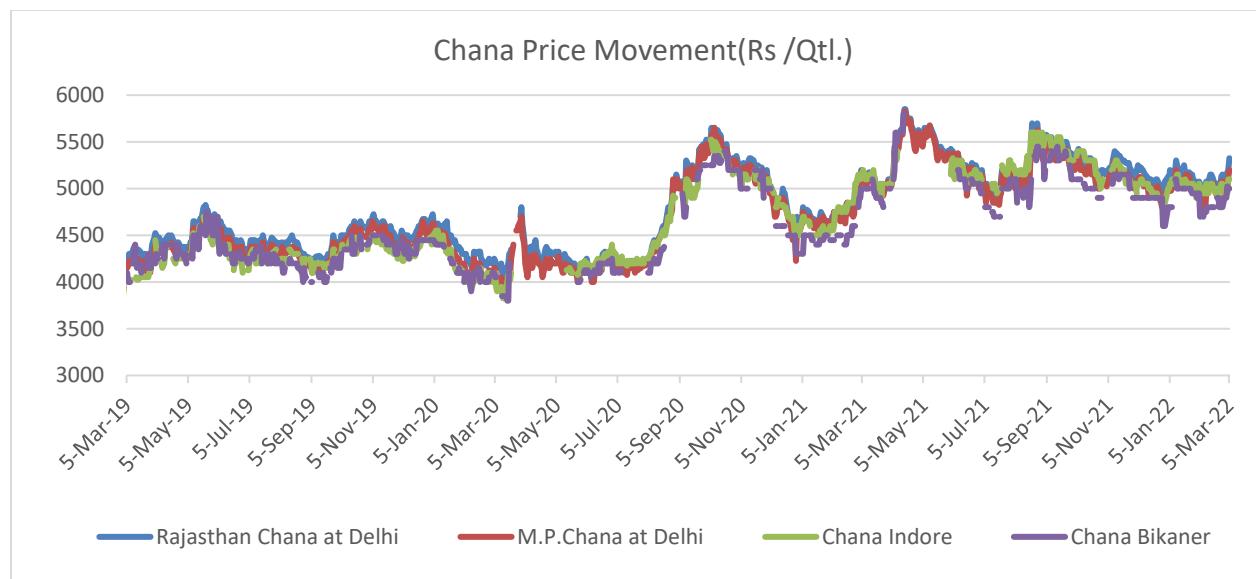

#### Rabi Pulses:

**Chana:** Agriwatch has pegged Chana production at 103.46lakh MT for crop year 2021-22 while Masur at 12.91 lakh MT, despite delayed sowing. Supply side would increase to 124.95 for Chana this year.

**Masur:** AW preliminary estimate for Masur pegged at 12.91 LMT for 2021-22, slightly higher than last year. If weather condition remains favorable, production may increase further. New crop in India comes in Feb end.

**Chana (Chickpeas /Bengal Gram):  
Market Recap:**

*Chana cash market moved up by 1 to 5 % in domestic cash markets in last one month due to the ongoing procurement drive, rising fuel cost and the restricted import flow amid improvement in domestic demand for besan despite good crop size this year. Prices of Chana are likely to move towards MSP in March. The overall sentiments remains firm and it may move up by 100-200 further. Farmers had covered 114.95 lakh ha in 2021-22, up by 4.48 % from the previous season. Demand for Chana dal and besan has started increasing ahead of Holi festival. New arrival has already started. However, Nafed has old stock and higher carryout would cap unexpected spike in Chana market. Import continues and in Nov –Dec India imported 45651.7 & 23251.23 MT respectively. Total import have gone up to 1.23 lakh MT from April to Dec-2021. If weather remains favorable, India is going to harvest over 103 lakh MT this year, considered to be ample for the domestic consumption. However, weather conditions in Mar are very crucial and it has potency to direct price either way up & down. Following graph illustrates Chana price movement in different markets:*

**Price Dynamics:** Prices are likely to trade steady to slightly firm in March-2022 due to:

- Festive demand for besan and dal
- Procurement drive on MSP(Rs 5230 per 100kg)
- Restricted release by NAFED
- Delayed arrivals
- Restricted import flow from the least developed countries.

**Seasonality Index:** hints steady to slightly firm movement for the local spot market for March -2022.

Area: Lakh Ha Source: Govt. of India

**Field Pea (Matar/Dry Pea):****Fundamental Analysis and Outlook:**

With the increasing arrival pace from the new local crop peas market decreased by 18 to 19 % in Kanpur and M.P. markets. Prices have come down by Rs900-1000 during last one month to Rs 5000-5100. More decline is expected as there is a bumper production of Chana this year. Indian farmers had covered 10.18 lakh ha this season, down by 1.93 % from the last season. As the supply side is bound to decrease ,pressure on price might continue .

Govt is unlikely to free import this season too. Consumers have shifted to other dals available in domestic market at competitive prices. Prices of peas in Kanpur market has come down to 5000 from 6000 in Mid Feb. Under prevailing condition steady to slightly weak movement is expected.

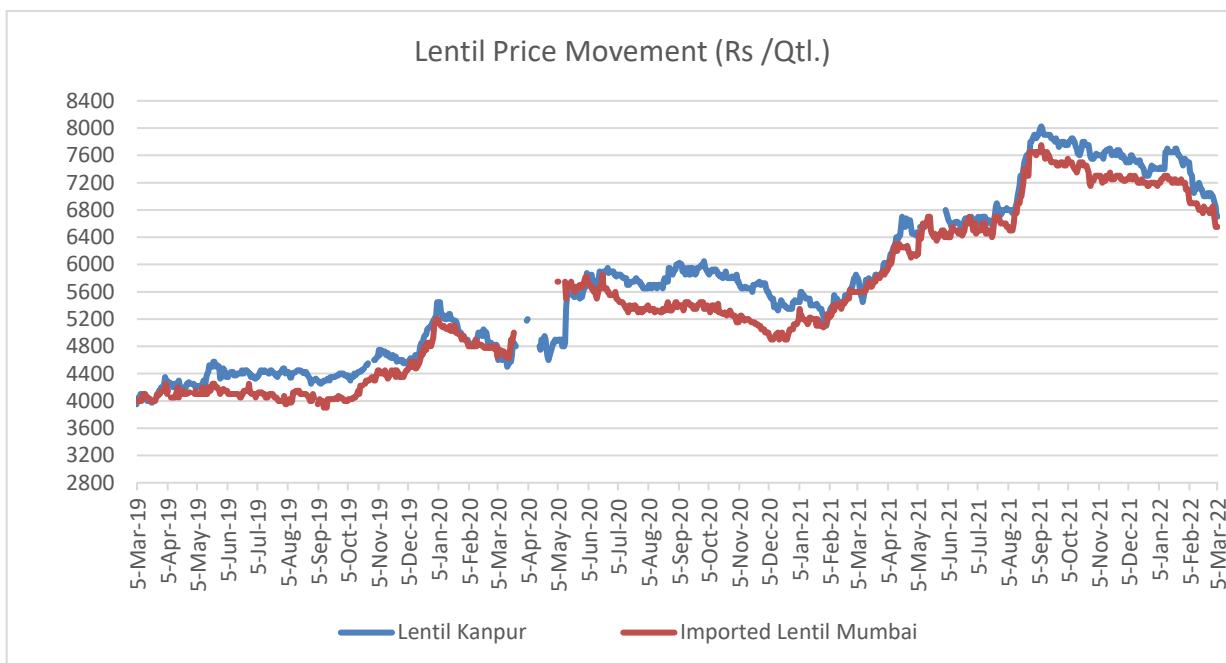

**Price Dynamics:**

**Pea market is expected to trade steady to slightly weak in March-2022 due to:-**

- Shifting of bulk consumers from Matar to Chana dal in domestic market
- New arrivals
- Green vegetables availability at affordable prices
- Favorable weather for the standing crops
- Stockists release of old stock

**Masur (Lentils):**

Arrival from the new crop has started increasing .Crop condition is good so far with higher area coverage, production size may improve from 11.91 to 13 lakh MT , given the normal weather condition so far. Demand for Masur and Masur dal has improved and but its impact on price has been negated by higher arrivals from the local crop. Prices of Masurin various markets have decreased by 5 to 8 % during last one month and may decline further by Rs 200-300. Accumulated imported stock and new arrival may continue to pressurize markets in coming weeks. Supply side from Canada would improve this year too. So the overall tone remains weak

**Price Trend In Cash Market:****Price Dynamics:**

In Feb-2021, average price in key market Kanpur was down by 8.21 % to Rs 6700 against Rs 7300 In the beginning of Feb-2021. Prices are likely to trade steady to slightly weak in March-2022.

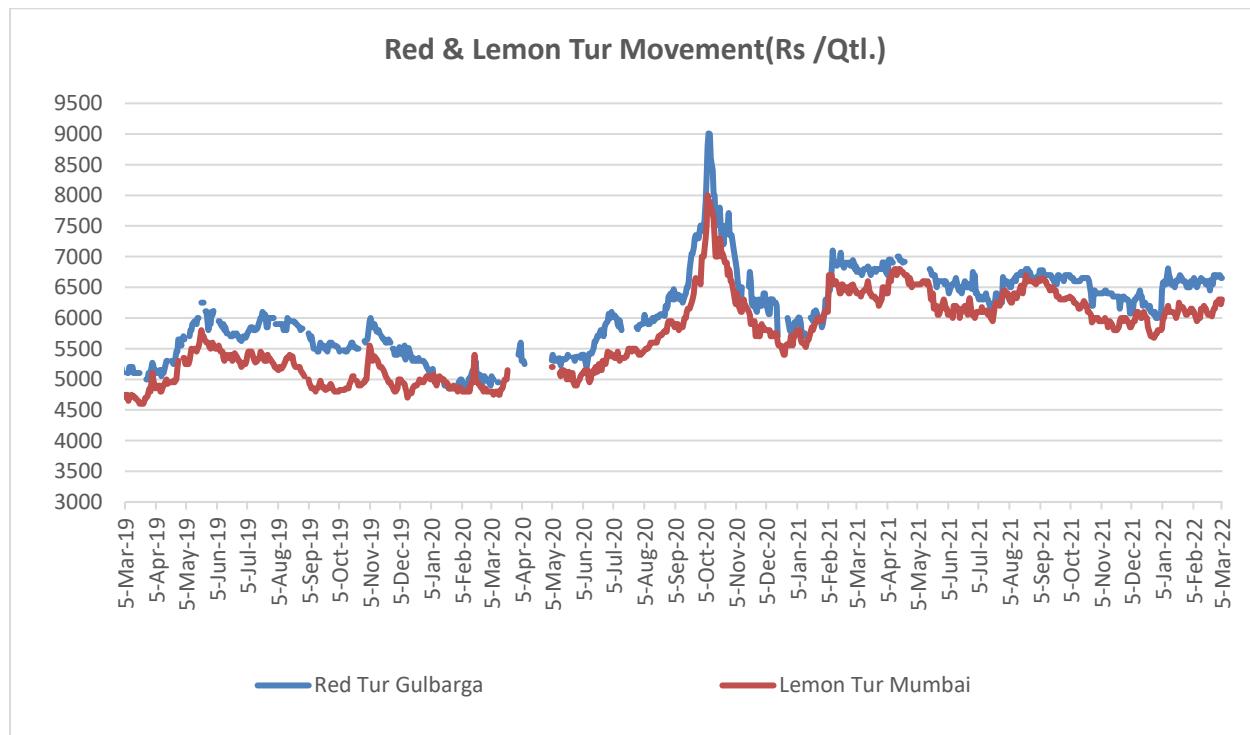

Steady to weak tone is expected in due to:

- Higher area coverage/new arrival
- Availability of imported stock at ports
- New arrivals
- 

**Outlook for March-2022:** Steady to slightly weak movement might be seen

**Tur (Toor/Arhar/Red Gram/Pigeon Pea/Aware):****Fundamental Analysis and Outlook:****Market Recap:**

**Tur cash market traded up due to the increased quotes in Myanmar and active buying activities by mills just ahead of Holi.** Tur prices in various markets increased by 1 to 2.5 % in A.P. and M.P.,s markets while it traded slightly down in Gulbarga and Mumbai markets. The highest increase was seen in Indore markets where it moved up by 200 to Rs 6600. In Gulbarga market it is being traded at Rs 6650. As per Agriwatch estimates, crop size of Tur is 37.11 lakh MT, revised down from 40.22 lakh MT. Quotes in Myanmar has gone up to \$825, up by \$20 from last week. Freight has gone up due to the increasing fuel price and other logistic issues due to the ongoing conflicts between Russia and Ukraine. Availability is good in Myanmar and African countries. So, sudden spike is unlikely.

**Price Dynamics:**

In Feb-2022, average price in Gulbarga market increased by 2.5 to 4 % to Rs 6550.

. Tur price in March is likely to trade firm due to:

- Increasing import cost
- Decreasing arrival in markets
- Rising fuel prices
- Mills demand before Holi

**Seasonality Index**-depicts steady to slightly firm tone.

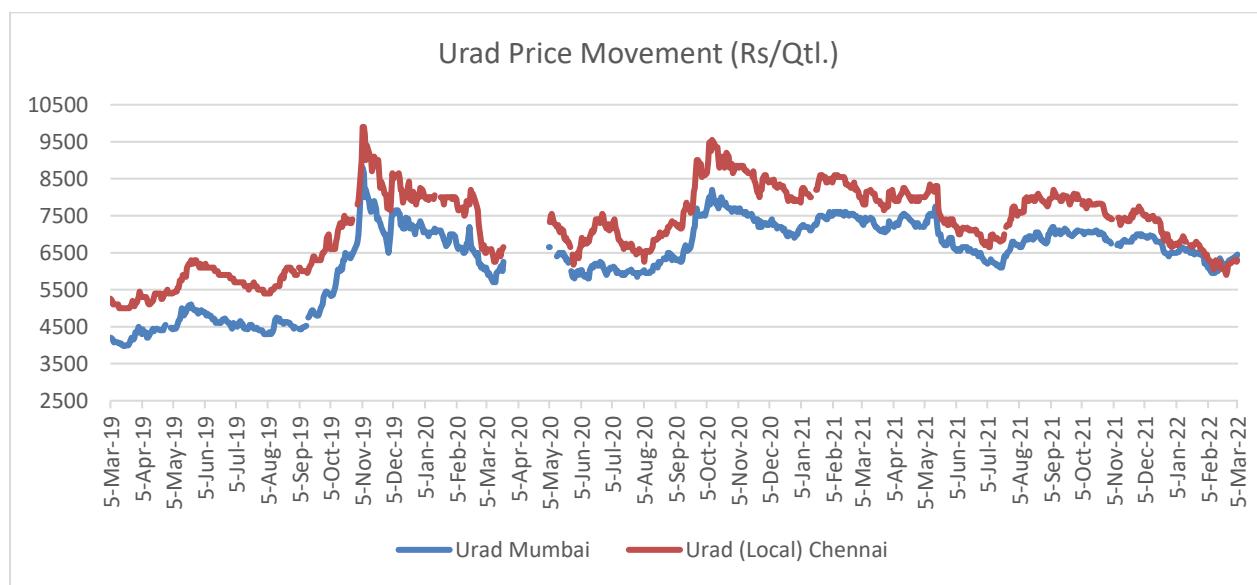

**Market Outlook for Feb-2022:** weak tone may prevail

### **Urad (Black Matpe/Black Gram)**

#### **Fundamental Analysis and Outlook:**

##### **Market Recap:**

**Urad cash markets continued to recover during last two weeks. It moved up by Rs 200 to Rs 6200 in Mumbai market and Rs 100 to 6000 in Chennai market.** Recovery in Urad cash market is unlikely to continue as the quotes in Myanmar continue to decrease. It has decreased by \$40 to \$760 per MT during last 8 days. Notably, Myanmar is harvesting bumper crop this year and the export availability is said to be around 7 to 7.5 LMT. It will continue to pressurize Urad market in the local market. If the current import policy continues, import would continue to take place till June-2022. Apart from it, arrivals from the south Indian states are expected to start from the end Feb. So, the traders, stockists and mills are very cautious to go for bulk buying. All these factors are pushing prices down. The price gap between the imported & local crops is contracting and it may settle and stabilize after a decline by 100- 200 more. Demand is yet to pick up. If govt. extend the BL date from 31<sup>st</sup> March-2022, prices may decline from the current level by Rs 300-400.

**Seasonality Index** depicts steady to steady to slightly firm movement in March-2022.

##### **Price Dynamics:**

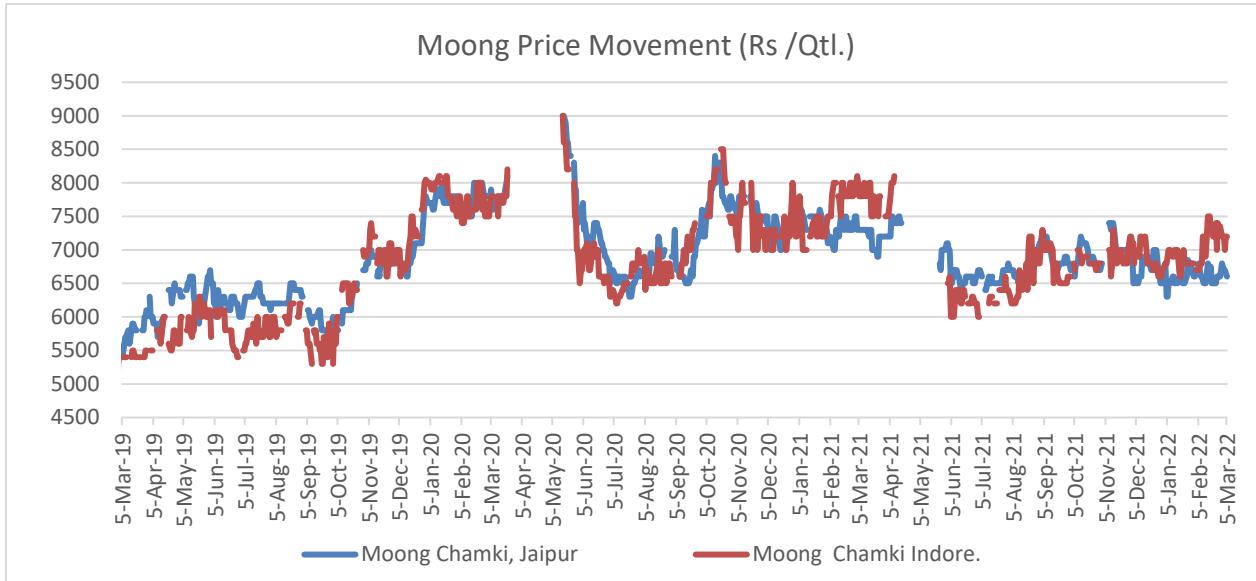

In Feb-2022, average prices in key markets including Mumbai/was increased by 200 to 6300-6400. Prices may stay steady to slightly firm in March due to:

- Low import flow
- Increasing fuel cost
- Higher import cost
- Increasing quotes in Myanmar

**Market Outlook for March-2022:** Prices are likely to trade steady to slightly firm.

**Fundamental Analysis and Outlook For Moong:****Market Recap:**

**Moong prices continue to trade under pressure in the local markets as the import flow from Myanmar at very competitive price, ample stock (over 3 lakh MT) in the central pool and the depressed prices in Indian markets encouraged Ministry of Commerce and Industry to place Moong from Free to restricted import list from immediate effect. Markets see it a good move as it would support cash market. There was a fear in the market that if prices continue to rule below MSP by Rs600-1000, farmers may reduce area in Kharif season. Right now, availability is good and the current move may support Moong market to some extent. Supply side is at comfortable level and prices are expected to stay at current level (6000-6800). With this move the declining trend in the market may stop. Prices in Jaipur Market were quoted in the range of Rs5500-6500.**

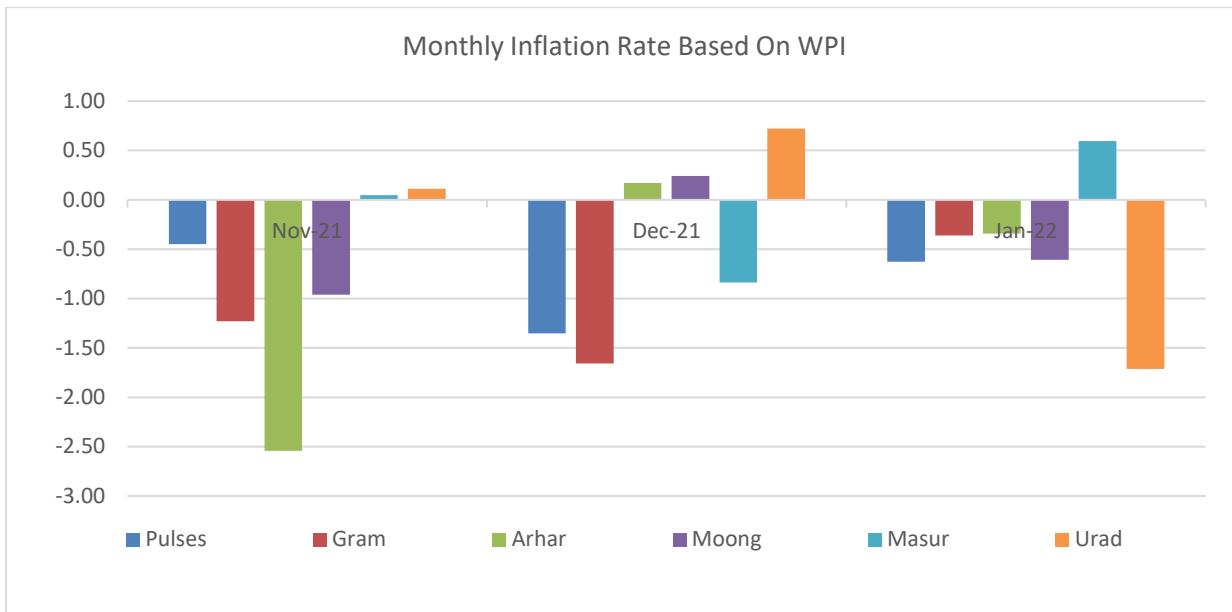

**Price Trend:****Market is expected to trade range bound in March due to:**

- Higher availability of inferior quality crop in the market
- Ample stock in Central pool
- Weak demand from retail and wholesale sectors.
- Likely good production size in Summer season

**Market Outlook for March-2022:** Range bound movement is expected

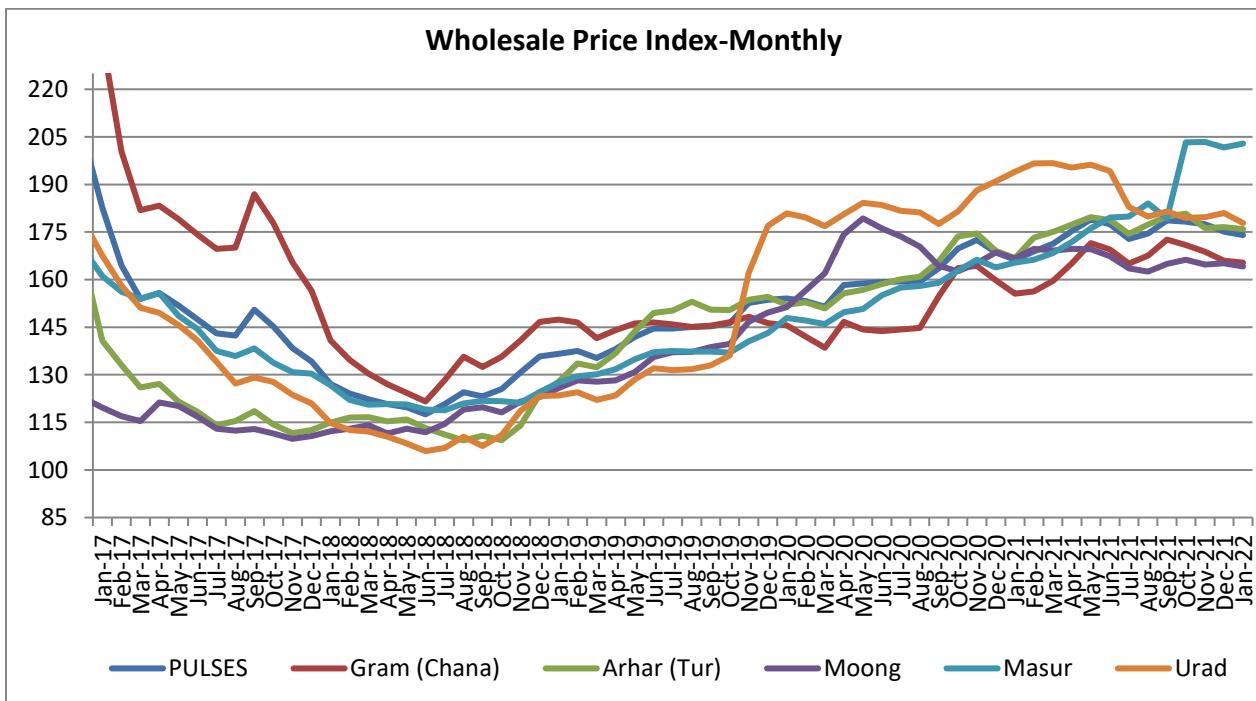

## Agri Commodity Indices Jan -2022:

Pulses WPI: Pulses WPI decreased by 2.4 points from 177.5 in Nov to 175.1 in Dec-2021
