Commodity-wise Domestic, International Prices and Arrivals at Different Centers

Highlights-Domestic Market:

- **Indian farmers have covered 119.16 lakh ha area under pulses against 120.91 lakh ha last year as on 13 Dec-2019.** Normal area under rabi pulses is 146 lakh ha. Area under gram is up by 0.16 % to 80.63 lakh ha against 80.50 lakh ha last year. Lentils area was recorded at 13.75 lakh ha against 14.8 lakh ha last year till date. Normal area under lentils is 14.19 lakh ha. However, peas area is up by 6.41 % to 8.30 lakh ha against 7.80 lakh ha last year. Normal area under peas is 9.45 lakh ha. Area under urad is up by 1.89 % to 4.32 lakh ha against 4.24 lakh ha. Normal area under urad is 8.61 lakh ha. Moong area was registered at 1.44 lakh ha as on 13th Dec-2019. Normal area under rabi moong is 10.10 lakh ha.
- **Central govt. has asked states to offtake pulses against demand at subsidized rates from buffer stock.** As per official sources centre has a buffer stock of around lakh MT. Union minister ram Vilas Paswan has written all state govts. to offtake pulses for distribution through PDS and other available networks. The govt. sells tur and chana through ration shops at prices in the range between Rs 45-55 per kg. In retail market chana and tur dal is being sold at rs70 to 120 per kg. Prices of pulses are going up due to rains and flood generated loss during kharif season.
- **Recent rains are beneficial to late planted tur crop and maturity of the crop is expected to be delayed by 10 to 15 days.** However, early crops are nearing maturity and its harvesting too is expected to be delayed by 10 days. Arrival of new crop have started in some pockets of Madhya Pradesh, Uttar Pradesh and Maharashtra. As moisture level in the new crop is higher, above 14-15%, it is being traded 200-300 per qtl. lower than normal price. As rains are beneficial, crop size may improve from 3.7 to 3.8 MMT this year. As import through private channels remains restricted, import through trade channel would remain halted until govt. extends import dead line. Import through G2g basis continues. Pressure of arrival might be felt by the end of this month. So any major recovery in tur cash market is unlikely at this point of time.
- **Demand from cash urad market gets affected at higher level. Govt has not approved additional 1 lakh MT quota for import as of now despite demand from various pulses organisation.** As loss in kharif urad production is obvious, prices are likely to hover above MSP in the new year too. Prices of urad may decrease further by Rs 200 from current level due to sluggish demand. Stock in private hands is dwindling. However, well to do farmers are unwilling to release stock sensing uptrend to continue in coming weeks once again. Overall trend in urad market seems bullish. If govt.'s allocate additional quota and clears urad stock held at ports, some cooling impact might be seen.
- **Arrival in major markets have started declining and pace of procurement is comparatively lower.** So moong cash market is almost steady. Demand from millers is weak at higher level. Private participants are avoiding bulk buying as they fear govt. would sell it below MSP again. So need based buying is on. As kharif crop size is lower this year, any major decline is unlikely at this point of time. In Jaipur market moong is being traded at Rs 6700-6900 per qtl. and it may continue to trade ranging Rs 6500-7000.
- **Chana cash market continued to trade under pressure due to higher availability of old crop and likely higher area coverage this year.** Area coverage in Rajasthan and AP has increased and prospects of bumper production looms large. Demand is weak from mills end. New crop is likely to hit market from mid-February and old available stock is sufficient for taking care of two months demand. Besides, Nafed too would prefer to release 6 lakh MT chana in Jan & Feb. It would not allow market to move up until crop gets damaged in Jan and Feb. In Delhi market chana is being traded at Rs 4375-4450. It may come down to 4100-4200 if Nafed accepts bids around Rs4000.
- **Stock of lentils in domestic market is lower. Despite lower stock import continues at cheaper price.** It is affecting market sentiments. Demand too is weak from mills at this point of time. As it is lean season and new crop is almost three months away from now, cash lentils market may improve. Nafed still has 2lakh MT stock. Out of which, 50 % may be release before new crop hits the market in Feb. Sowing is running behind right now by 8%, however, farmers would cover it in next two weeks under favorable weather condition. Despite lower price realization area is likely to be similar as last year. Lentils in benchmark market is being traded at Rs 4600-7500. Import is taking place at Rs 4450-4500.
- **Pea market trades under pressure as chana trades lower. Import quantity remains restricted at 1.5 lakh MT and govt is not going to relax quantity norms soon.** Illegal import continues from Nepal and B, desh. It is hurting peas price. More downside trend is unlikely in peas market.

International Market Update:

- **Chana production in Canada may decrease by 26% to 2.3 lakh MT in 2019-20.** Carryin Stock with latest production estimate hints availability to be around 3.7 lakh MT. rains have affected availability of quality chana. However, availability of no 2 quality chana may increase from 35 to 38 % this year.
- **Peas market traded firm due to demand from China. As demand decreased this week, prices stayed steady.** Yellow peas is being traded at \$6.5 (Canadian dollar) per bushel while green peas are being traded at \$10.5-11 per bushel basis FOB.
- **Red lentils in Canada traded higher.** Farmers were able to get 20 cent/bushel for their crop. Demand from India weakened and it is being traded at 24 cent basis FOB.
- **Slight improvement was seen in pulses global market as offtake was seen increasing and may increase further in December.** Even demand from India is likely to go up as rabi crop size too expected to be lower. Demand for lentils, tur and urad from India is bound to go up in new year and it may support global pulses market.
- **Chickpeas production In US is expected to decrease sharply to 3.3 lakh MT in 2019-20 as area coverage declined to 4.5 lakh acres despite higher yield realization this year in the initial stages of harvesting.** Demand from main export market like India, the EU and Canada is decreasing. Global chickpeas price is expected to decrease due to large world chickpea supply this year.
- **As per the latest report from dry pea & lentils council harvesting activities of pulses in US is coming to an end now.** Dry pea harvesting is over in 98% area while it is 90 % for lentils. Small Chickpeas harvest is over in 80% while it is 77% for large chickpeas. Total pulses harvesting on an average comes to 93% so far.
- **Dry peas production has been pegged at 856163 MT, lentil production at 2.47 lakh MT, total chickpeas production has been pegged at 1.79 lakh MT.** Total pulses production has been pegged at 12.82 lakh MT this year against 15 lakh MT last year. Due to rains generated issues, yield has been down this year for all pulses in US.
- **Dry peas production in Canada is expected to increase by 30% from last year to 46.73 lakh MT in 2019-20.** It would be the second highest production. The rise in production is mainly attributed to higher area and yield this year. Main growing states like Saskatchewan and Alberta contribute 51 & 44% in total production in Canada. Manitoba contributes 3% in total production. Despite 30% increase in production, total supply is expected to increase only by 18% due to lower carryin stock. Export is expected to increase to 34 lakh MT. Canada had produced 35.81 lakh MT dry peas in 2018-19. Yield is expected to increase from 2.5 to 2.71 tonne per ha. Canada had exported 32.50 lakh MT last year. Carryout stock is expected to increase from 3.88 to 6 lakh MT in 2019-20. Average price would continue to hover in the range of \$245 to 275 per MT in 2019-20.
- **Lentils production in Canada is expected to increase from 20.92 (2018-19) to 25.20 lakh MT in 2019-20** due to higher yield. Yield has increased from 1.40 to 1.68 tonne per ha this year. Despite higher production total supply is expected to increase slightly from 30 to 31.94 lakh MT due to higher domestic usage. It would increase from 3.14 to 5.94 lakh MT this year. Carry out stock would increase slightly from 6.54 to 7 lakh MT in 2019-20. However import and export is expected to decrease slightly this year. Average price is expected to rule \$375 to 405 per MT in 2019-20.
- **Chickpea production in Canada is expected to decrease this year from 3.11 to 2.63 lakh MT** due to lower area coverage. Farmers in Canada had covered 1.59 lakh Ha in 2019-20 against 1.79 lakh Ha last year. Despite lower production total supply would increase slightly from 3.71 to 3.81 lakh MT in 2019-20. Canada consumes 1.26 lakh MT locally. Carryout is expected to stay steady at 1.05 lakh MT. Average price of chickpea may rule at around \$ 425 to 455 per MT.
- **Lentil area in Australia is expected to decrease by 5.84% from 303 to 285 thousand ha in 2019-20.** However, production is expected to increase by 18.89 % from 3.23 to 3.84 lakh MT due to likely better yield in growing regions.

Pulses WPI Index:

Index Numbers of Wholesale Price in India (Base: 2011-12=100)

Pulses WPI increased by 6.2 points from 146.3 in Oct to 152.5 in Nov-2019

Pulses-Wise Scenario:
Chana
Current Scenario:

Weather condition for chana sowing remains favorable and farmers may cover higher area under chana in coming weeks. Despite lower price in domestic market area under chana would cross 105 lakh ha as farmers in Rajasthan, M.P, are using even unfertile land this year due to good moisture level in the field and higher MSP (Rs 4875 per qtl.). However, area in south India except may decline slightly. Pressure on chana cash market continues as availability is higher in central pool and with private trades. Futures remains unsupportive and whenever prices moves up, sellers /stockiest become active. It pressurizes chana price. Nafed still has around 15 lakh MT chana stock, including reserve stock. New crop would be available from Feb end so, the quantity with Nafed may easily take care of chana demand for next three months. Besides, private trades too would prefer to lighten its stock before new crop. In Delhi market chana is being traded at Rs 4350-4400. If demand improves and Nafed decides not to sell stock below 4400, it may move up to 4650-4750. Otherwise it would come down again. For chana market Nafed is on driver's seat. Weather condition in Jan and Feb too would play a crucial role as price driver. Under prevailing condition any spike in chana market is unlikely.

All India average price for Chana decreased by 0.7 percent from Rs 4405 to 74 per qtl. during review week.. Australian Chana (imported) price too decreased by 0.77 percent from Rs 4241 to Rs 4208 per 100kg during the same period. Following graph illustrates the chana price movement in different markets:

Market Outlook: Slight recovery might be seen in chana cash market this week despite higher area coverage and weak futures. However, it is unlikely to sustain at higher level..

Peas (Matar):
Market Recap:

After decline in cash peas market slight recovery is expected this month as stock in private hands is dwindling with restriction of import. Area coverage too is 6.41% to 8.30 lakh ha so far against normal of 9.45 lakh ha for the whole season. However, illegal import from B'desh and Nepal continues to affect price in major consuming markets. Higher availability of chana too have capped uptrend in peas market. Under emerging scenario range bound movement is expected in Dec. Despite higher prevailing prices in comparison to chana in domestic market, the farm ministry is unwilling to relax quantitative restriction on imports of yellow peas as other pulses availability except urad in domestic market is ample and prices of these pulses are ruling lower. Earlier the farm ministry in June had suggested to increase import volume from 1.5 to 2 lakh MT. Earlier in March -2019, the pea import quantity was increased from 1 to 1.5 lakh MT. Now, food minister has said that availability of pulses is ample at 2.5 MMT for 2019-20 in central pool any short fall can easily be met till March-2020..It hints that peas import quantity is unlikely to be increased further even in the fourth quarters.

Pea in Mumbai market is being traded down at Rs. 4900-4950, while in Kanpur market it is being traded at Rs 4850-4900 per qtl. As chana price has started increasing, pea too may recover slightly in tandem with chana price. Arrival in local markets has decreased and it may support pea market to some extent. Stake holders should buy after downward correction. Restriction on pea import at 1.5 lakh tonne till March-2020 and lower availability of imported stock may support pea market once again from mid Dec as demand starts improving at this point of time. If chana continues to trade firm, pea price might recover too. Under emerging scenario steady to slightly firm tone may prevail.

Current Market Dynamics & Outlook:

Pea market recovered due to slower pace of import flow, quantity restriction and lower availability of imported stock. Kanpur market traded down by Rs100 at Rs 4900-4950 per qtl due to weak demand. Overall, all India average price increased by 1.01% to Rs 5390 per qtl in thesecond week of Dec.In Mumbai market, pea traded at Rs 4900.. Stake holders should retain stock as stock at port is dwindling now and demand for festive season begins.Firmness may continue with increasing chana price.

Spread With Chana:

Spread between Chana and Peas, at Kanpur market remained in negative zone. However, gap has increased from Rs 425 to Rs 525 due to increased pea and decreased chana price. Spread is expected to remain in the negative zone in Dec too on relative movement in Chana prices. Overall outlook seems steady to slightly firm this week.

Market Outlook: Outlook remains steady to slightly firm this week.

Lentils (Masoor):

Market Recap:

Despite higher import flow in Oct-Nov cash lentil market improved. Even stockiest have started restricting selling ahead of lean season. It may help market to recover once again. Area is lagging behind as of now and may end with last year's level. New crop is expected after two months. So improvement in demand expected by mid-Dec may push up price. Higher MSP too would remain supportive in coming months. However, any spike is unlikely as import flow is likely to continue at current price prevailing in the market. Nafed still has 2.07 lakh MT old and new stock and it would start releasing lentil before new crop hits the market. So scope for firmness is limited. Even supply side is expected to remain at comfortable level. Prices in global market is lower, so import duty remains ineffective. Lentil vessel is being quoted at Rs 4450-4450 per quintal and container is being quoted at Rs 4450-4550 per quintal. In Kanpur market it is being traded at Rs 4650-4700 per qtl. Nafed selling would remain crucial apart from import flow and weather condition in Dec-Jan.

Current Scenario:

In the 2nd week of Dec-2019, average price in key market Kanpur was up slightly up 0.45 % from Rs 4600 to Rs 4700-per qtl.. Prices are likely to trade steady to slightly firm in the 3rd week of Dec, due to improved demand.

Market Outlook: Prices are likely to stay steady to slightly firm due to improved demand from mills and restricted selling by stockists.. Nafed would intervene when prices move beyond MSP level. Import is likely to continue, and it would continue to limit one-way utrend.

Pigeon Pea (Tur/Toor):

Market Recap:

Tur crop condition is good and new arrival commenced in parts of M.P. Karnataka and U.P. Pressure is likely to build up by end Dec in Karnataka.. Private trades have started offloading stock and pressure is seen on the cash market right now. Any spike in cash tur market is unlikely as G2G import continues. In Gulberga market tur is being traded at Rs 5350-5450 per qtl. As there is delay in procurement drive, pressure may continue on tur market. It may decrease by Rs 100-200 more in coming weeks. There is ample stock in central pool and Nafed may start selling old crop. Overall outlook for tur market seems weak with commencement of new arrival. Pressure may build up by the end of this month.

Current Market Dynamics & Outlook:

Tur procurement target has been fixed at 545573MT. As a nodal agencies Nafed and FCI would procure tur this year, supported by some state agencies too. FCI would procure tur in Karnataka when arrival would start picking up. Actually procurement target has been decreased this year due to lower kharif crop size, so that supply in open market continues. Crop size may cross 37lakh MT with prevailing good weather condition. Cash market is expected to trade in the range of Rs 5200-5600 during current week.

Market Outlook:

In the 2nd week of Dec-2019, average price in Gulberga market was down by Rs 50 to Rs 5400, due to higher import volume, selling of imported stock at lower price and fear of Nafed selling. Tur price is likely to decrease further as demand remains weak. New arrival started now.

Black Matpe (Urad):

Demand from cash urad market gets affected at higher level. Govt has not approved additional 1 lakh MT quota for import as of now despite demand from various pulses organisation. As loss in kharif urad production is obvious, prices are likely to hover above MSP in the new year too. Prices of urad may decrease further by Rs 200 from current level due to sluggish demand. Stock in private hands is dwindling. However, well to do farmers are unwilling to release stock sensing uptrend to continue in coming weeks once again. Overall trend in urad market seems bullish. If govt.'s allocate additional quota and clears urad stock held at ports, some cooling impact might be seen.

Current Market Dynamics & Outlook:

Nafed too can intervene into the market with govt.'s consent as it has around 2 lakh MT old stock. It too may cap spike in the market. New Rabi crop would be available in March. Area under urad is expected to increase slightly in rabi season. However, it would be unable to compensate the loss seen in kharif season. Right now in Chennai market urad is being traded at RS 7400 and may come down to Rs 7200. As soon as demand improves, it may increase to Rs 8000 once again. It is offering urad FAQ at \$735 and SQ at \$800 per MT basis Indian ports. Millers are buying and stocking it locally in hope that govt would allow addition 1 lakh MT import, if prices cross beyond 8000-8500.

Market Outlook: Urad Prices are likely to show steady to slightly firm momentum.

Green Gram (Moong):
Market Recap:

Procurement agencies have procured 96,731.36 MT moong in various states so far. Procurement in Haryana has ended now at 1065.9MT. It is on in states like Tamil Nadu, Telangana, Maharashtra, Karnataka, Rajasthan and AP. The highest contributor is Rajasthan where 80,281.23 MT moong has been procured. Telangana and Karnataka have contributed 5874 MT each so far. Procurement in Maharashtra was recorded at 2843.72 lakh MT. AP has contributed only 741.85 MT so far. FCI would procure 30,000 MT moong in Maharashtra out of 344654 MT target for all India. Arrival in major markets have started declining and pace of procurement is comparatively lower. So moong cash market is almost steady. Demand from millers is weak at higher level. Private participants are avoiding bulk buying as they fear govt. would sell it below MSP again. So need based buying is on. As kharif crop size is lower this year, any major decline is unlikely at this point of time.

Market Outlook: Moong prices are likely to trade steady to slightly firm in the near term.

Pulses Wise Technical Outlook For The Week:-
Chana:

Technical Analysis:

Outlook: –We expect prices to move steady to slightly firm in the coming days.

Chart depicts steady to slightly firm movement in Nov.

RSI is moving up in neutral region.

Expected price band for Chana in Delhi is 4400 to 4700 for this week.

Strategy: Buy on dip

Trade Recommendations: Go long around 4350 with the first target of 4550 and second target 4600 with stop loss at 4300 level.

Delhi Chana Physical:

Support & Resistance				
S2	S1	PCP	R1	R2
4300	4350	4450	4750	4850

Spot Market outlook: Chana prices are likely to show steady to slightly firm movement this week

Peas:

Yellow Peas -Canadian Origin (at Mumbai) - Spot Market Weekly Chart

Outlook – Improvement may be seen in pea market as chana may move up and support pea market. If chana trades firm.it may recover.

Technical Analysis:

- Candle stick chart denotes firm movement in the market.
- RSI is moving up in neutral region.
- Expected price band for pea is 4900-5350 in this week

Strategy: Buy on dip

Trade Recommendations: Go long around 4900 with the first target of 5200 and second target 5300 with stop loss at 4850 level.

Support & Resistance
