Commodity-wise Domestic, International Prices and Arrivals at Different Centers**Highlights-Domestic Market:**

- **Kharif pulses sowing has entered in the last phase now. Indian farmers have covered 136.78 lakh ha so far against 130.686 lakh ha last year as on 04th Sep-2020.** It is almost 4.67 % higher than last year and over 106% of normal (128.89 lakh ha) till date. Tur area is up by 6.33 % to 47.73 lakh ha. Urad area too is higher by 1 % to 37.92 lakh ha so far against 37.57 lakh ha last year. Normal area is 35.53lakh ha. Indian farmers have showed more interest in moong farming and they have shown 35.54 lakh ha so far against 30.53 lakh ha last year. It is higher by 16.41 % from last year and higher by 16.56 % of normal as on 04th Sep-2020. Kulthi sowing is down by 20 % at 0.24 lakh ha so far. Farmers have covered 15.35 lakh ha area under other pulses against 17.39 lakh ha last year. See details at page no -14.
- **Despite higher coverage area(around 48 lakh ha) under tur and around 3.6 lakh MT stock with Nafed,** cash market continued to trade firm and it may move up further by Rs300 to 400 from current level. The reason behind it is said to be non –issuance of import license to millers, due to delay in physical inspection of applicants’ mills. Around 20% mills are yet to be inspected. The DGFT has allocated 4 lakh MT tur import quota for 2020-21. Under prevailing conditions, if import licenses are issued by mid Sep(likely), imported tur would hit market only in mid Oct-Nov. So cash market may continue to trade firm in Sep too. If Nafed starts selling in bulk, it would cap market to a certain extent. If release is delayed, market may move up above Rs300-400 from current level. There may be some respite as tur from Mozambique(G to G basis) is said to be in way to India, may hit Indian ports in the third week of Sep. Sanctioned import quantity under G to G basis is 2 lakh MT for the whole year. Tur is being traded at Rs 6350-6450 in Gulberga market.
- **Higher import volume (around 0.75 lakh MT) expected in August, commencement of harvesting in** major producing states including MH and poor offtake from mills continued to pressurize urad cash market in Delhi, Mumbai and Chennai. Urad extended its loss by Rs 50 to Rs100 per qtl. Even bulk buyers remained away, ahead of new crop. The DGFT has not extended import time line and resultantly urad in Myanmar decreased by another \$5 to \$765 per MTMT. However SQ stayed steady at \$875 per MT. So pressure seems on urad cash market. No major loss has been reported so far and weather is likely to be good for harvesting and losses due to heavy rains in MP and MH may be compensated by higher area coverage in other states. In Mumbai market urad is being traded at Rs6100-6300 while in Chennai it is being traded at Rs 6350-6450. Supply is bound to increase after mid- Sep.
- **Chana cash market traded down by Rs 50 taking clue from weak futures and lackluster demand** at higher level by mills. Profit booking in futures too helped market to decrease. Demand for chana was weak even in states like M.P., Raj and Delhi. Its impact was also seen in south Indian markets. Despite festive season, dal demand remained low at higher level. Notably, price of chana has increased by Rs 800-1000 per qtl .in last one month and was higher than normal expectation of the market. So, a downward correction of Rs 100-200 is expected now. As new crop is months away and festive demand could emerge again, chana may trade firm again after correction. The burden of old stock with Nafed has already been neutralized now. In current situation, chana would continue to rule in the range of Rs 4800-5200. Bumper kharif crop like tur, moong and urad and higher volume of imported lentils would cap any unexpected jump in cash chana market.
- **Demand for moong and arrivals are normal in the market at this point of time. Prices are mostly steady,** though pressure might begin when arrivals from new kharif season pick up in Karnataka. Besides, higher area coverage and good crop condition so far would not allow market to move up from current level. Arrival from MH is expected from the second week of Sep, followed by MP and Gujarat. Arrival from summer crop is almost over now. If demand improves, slight recovery might be seen this week. There is no parity for import as moong prices are ruling lower than Myanmar right now. Expecting a huge crop in Rajasthan, stockists are preferring to sell now. So, overall trend seems weak in the medium term despite minor loss in Karnataka (8000 ha) and Telangana (600 ha) by flooding. However, higher coverage area would compensate the loss easily.
- **Masur cash market traded steady to slightly firm due to restructured duty(from 10 to 30 % again),** applicable from Sep-2020. India imported around 1.67 lakh MT masur in July and volume is expected to increase to 2 to 2.5 lakh MT in August. So any spike is unlikely in Sep. The reason behind higher import was reduced duty (10 instead of 30 %) till August. Prices may increase again once the imports have been consumed in various domestic markets. Right now imported masur is being traded at Rs 5400-5450 at Mumbai. Masur and masur dal demand is normal while supply side in overseas market is increasing with commencement of harvesting in Canada and USA.

International Market Update:

- **Stock position of urad in Myanmar is said to be around 2.75 to 3 lakh MT. New crop is expected to hit market in mid - March-2021.** By then Myanmar may export around 1 lakh MT under quota system before the new crop hits the market and retain 50,000 MT for domestic consumption. If India extends the time line for import, prices in Myanmar may move up by \$100 per MT from current level. Myanmar is offering urad FAQ and SQ at \$720 and \$825 per MT respectively right now and the price movements will depend on the Indian import time line. India govt may open import after assessing the kharif crop size and any losses of the crop that is, heading towards maturity and harvesting of which should commence in Sep.
- **Stock of Tur in Myanmar is said to be around 1.75 to 2 lakh MT from 2019-20 crop while new crop is expected in Feb 2021.** Farmers are shifting 20% tur area to sesamum. Indian importers have struck deal of 25,000 MT so far. As import remains restricted, the Myanmar govt has written to the Indian govt. to open import soon. However, India may not open imports given the higher area coverage of tur and good crop condition so far. Only if prices continue to move up, govt may consider opening in Oct-Nov for a limited period. Right now Myanmar is offering tur at \$625 per MT basis FoB. Price trend would depend on Indian decision over import time line.
- **Chickpeas traded flat with limited trading activity during the review week. Canada's harvest has commenced now,** while it started three weeks ago in the U.S. Pacific northwest and Montana. Production in Russia is expected to increase this year while production in Argentina may decrease by 50%. Production in Australia may increase considerably; however, its variety is desi type which may not compete with North American and Russian crops.
- **For 2020-21, Canadian lentil seeded area rose by 11.96 % to 1.72 Mha, due to good forecasted returns** compared to other crops. It was 1.53 Mha in 2019-20. By province, Saskatchewan accounts for 90% of the lentil area, with the remainder seeded in Alberta and Manitoba. Production is forecast to increase to 2.47 MMT (2.16 MMT last year), with supply lower due to smaller carry-in stocks. Exports are forecast to be lower at 2.1 MMT. Carry-out stocks are forecast to rise to nearly 0.175 MMT. The average price for all grades and types are forecast to rise from 2019-20, with higher prices from large green and red types. It may rule in the range of \$500-530 per metric tonne throughout the year. There is an expectation that import demand in the Indian subcontinent will continue to be similar or slightly higher in 2020-21. The data has been taken from the latest update from Agriculture & Agri food Canada.
- **For 2020-21, the area seeded under chickpeas in Canada fell by 23.89% from 159 thousand ha in 2019-20 to 121 thousand ha** due to the lower farm gate prices received in the previous year. Saskatchewan accounts for most of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 200 Kt, down 20.63% from the previous year, due to lower seeded area despite higher expected yields. Supply is forecast to rise to 410 Kt. Exports are forecast to rise from 105 to 125 Kt and carry-out stocks are forecast to fall from 160 to 150 Kt in 2020-21. The average price is forecast to fall marginally due to a larger world supply, with the expectation of an average grade distribution. It may hover in the range of \$455 to \$485 per tonne.
- **Chickpeas production in Australia is likely to increase by 3.5 lakh MT to 6 lakh MT in 2020-21, The new crop would hit market in End Oct.** As demand from India is weak, sentiments remain weak in Sep too. As chickpeas attracts 60% import duty, import volume is negligible from Australia. However, from other African countries, import continues on zero duty. India has imported 2.38 lakh MT from Zambia, Mozambique, Tanzania and Malawi.
- **As per latest updates by NASS, dry pea acreage may be down by 12-13% this year in US peas producing regions.** Farmers may plant 971,000 acres against 11,03,000 acres last year. Intended plantings are down from a year ago in Idaho, Montana, Nebraska, North Dakota, and South Dakota. However, area in Washington may increase by 19% this year.
- **Chickpeas area in the US is likely to decrease by 32% from last year. Small chickpea acreage shows a decline of only 5%, while large chickpea acreage is expected to decrease by 41%.** It is really a big surprise this year.

Monthly Outlook: -Pulses are likely to trade steady to slightly firm.

Pulses WPI Index:

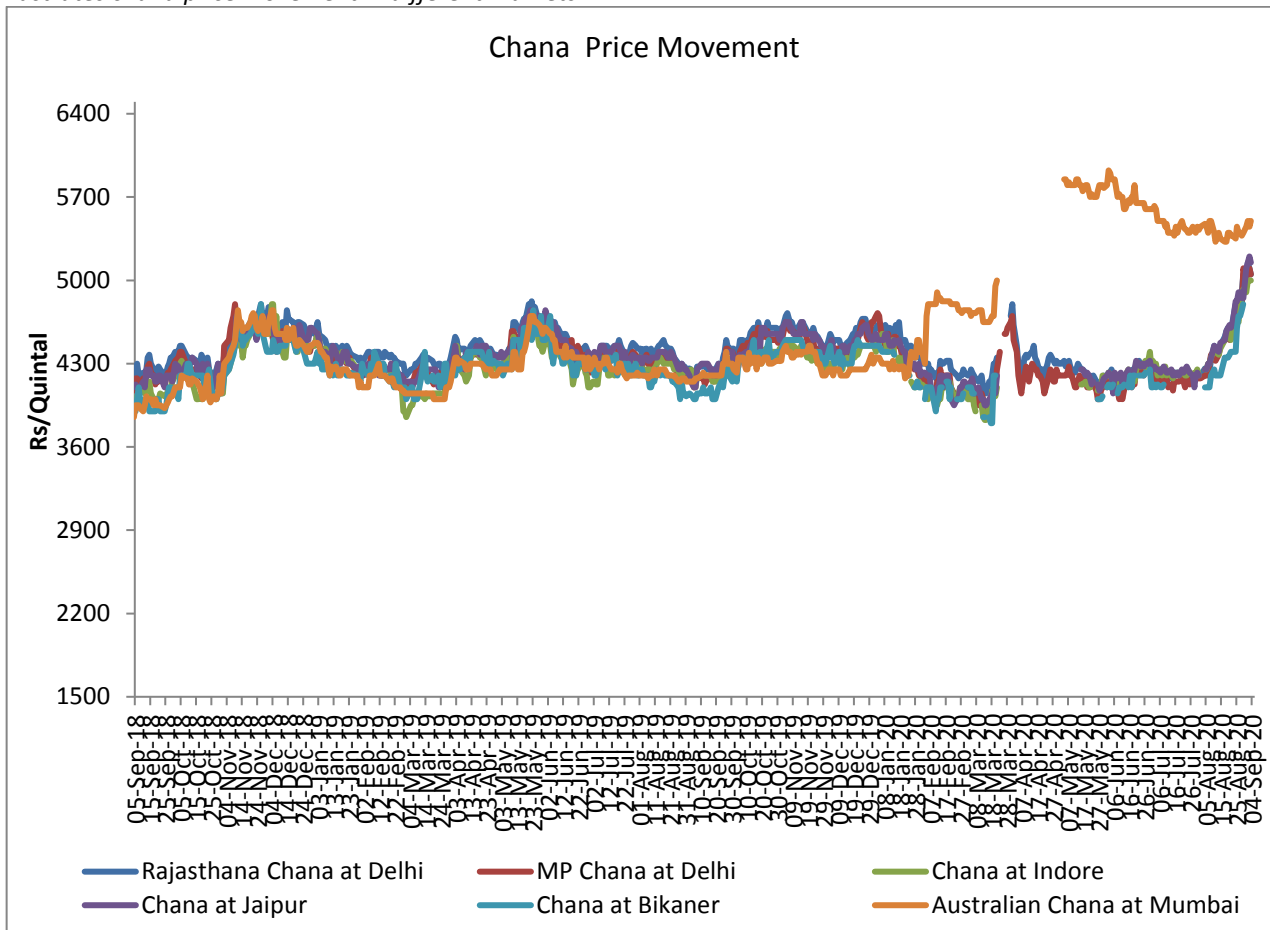

Chana

Current Scenario: Festive demand, restricted sale by private trades and Nafed's decision not to accept bids below MSP, have helped chana market to move up by Rs 300 more. Market may move up further if artificial difference between

demand and supply, made by punters/brokers, remains intact. However, it is unlikely to sustain for a longer period as govt. has ample stock and Nafed would continue to sell through auction at improved price (around MSP level Rs 4875). It would cap market at Rs 4800-5200. Chana is being traded at Rs 4900-5100 in Delhi market. Chana market is likely to sustain at this level. At this level selling by private trades is expected too. Demand for chana is expected to improve further and help market to recover to a certain extent, even beyond MSP levels if import from LDC countries remains restricted. India imported around 27,000 MT in July from LDC countries while from April to July around 2.38 lakh MT has been imported. Under prevailing condition overall short term sentiments seem firm for chana cash market as demand would continue to increase with market returning to normal path. In Delhi it may trade at Rs 4800-5200 in Sep.

All India average price for Chana increased by 6.5 % percent to 4950-5150 per qtl. during review week. Even Australian Chana (imported) price increased by 1% to Rs 5650 per 100kg due to firm futures in domestic market. Following graph illustrates chana price movement in different markets:

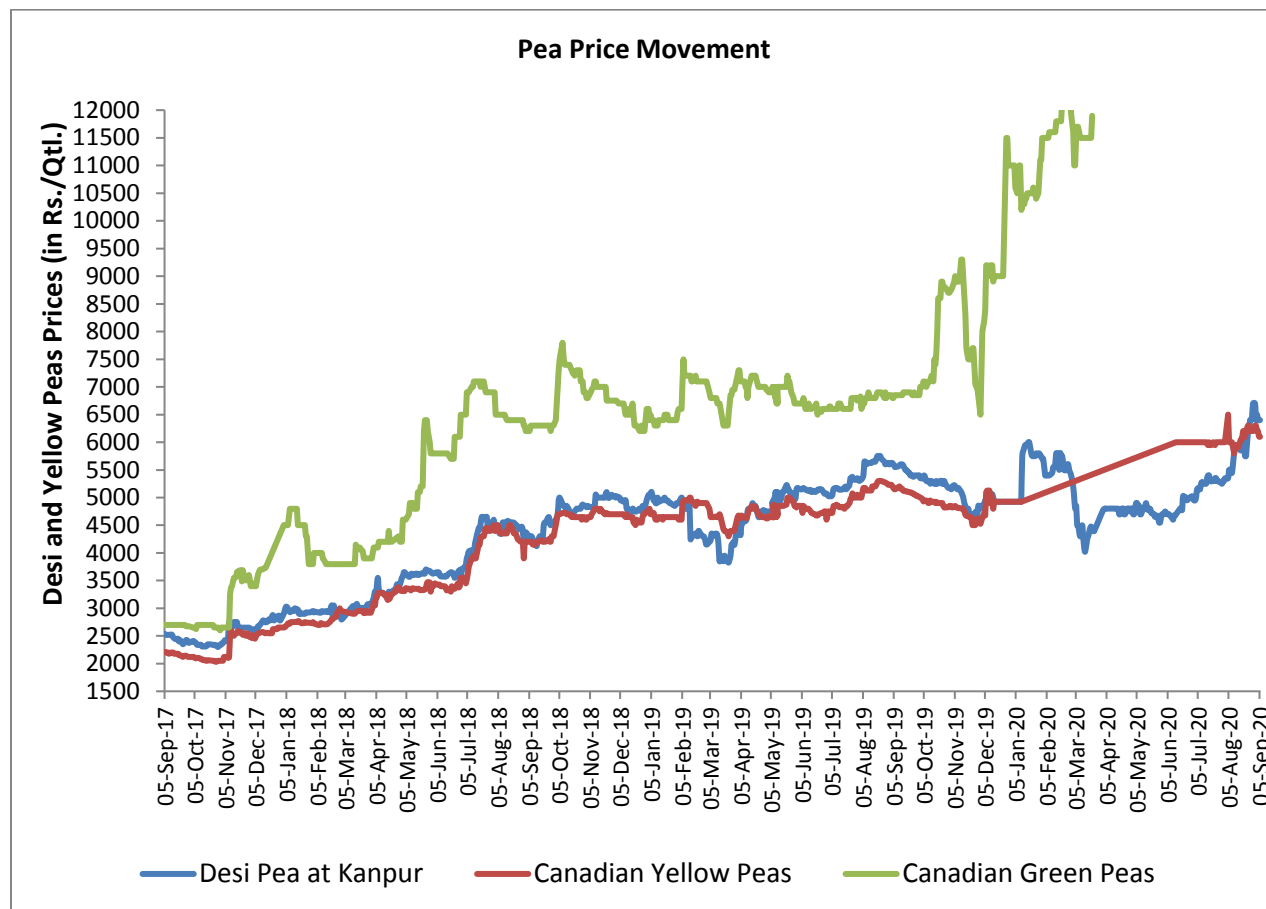

Market Outlook: Firm tone may continue in chana cash market this week too due to rejection of chana bids by Nafed below 4850 in Karnataka and MH. Improvement for dal demand too remains supportive for cash market. Apart from this improved offtake from mills in other consuming states amid lower import volume from LDC countries may support upward momentum in the weeks ahead. Indian importers have imported around 2.38 lakh MT chana during April to July 2020 from LDC without tax. Demand for besan mills and hotel industry has started increasing now. However, distribution of 1 k.g. dal per family/ per ration card would continue to affect direct demand from cash market till Nov. It would cap any unexpected spike in chana cash market.

Peas (Matar):

Market Recap: Peas cash market traded firm taking clue from firm chana cash and futures markets. Stocks of peas at ports are also now being released now with additional penalty and applicable duty. So after slight correction price will move up again since availability is decreasing continuously in major markets like Kanpur, MH, Kolkatta and Indore. However, demand at higher level may get disrupted and price may decrease again if chana trades lower. No import is taking place right now as import limit of 1.5 lakh MT has already been exhausted. With changed status from the free to

restricted category and hefty levy imposed on peas, no import is likely in the coming months too. The commerce ministry issued a separate harmonized system (HS code) for all peas (including yellow, green and kaspas) and changed its status in the third week of Dec. Now import deals are not taking place given these changes aimed at increasing consumption of chana which is abundantly available in domestic market. Under prevailing conditions govt. is unlikely to allow green peas import. So price of yellow peas will also stay steady at current levels or follow the chana price trend.

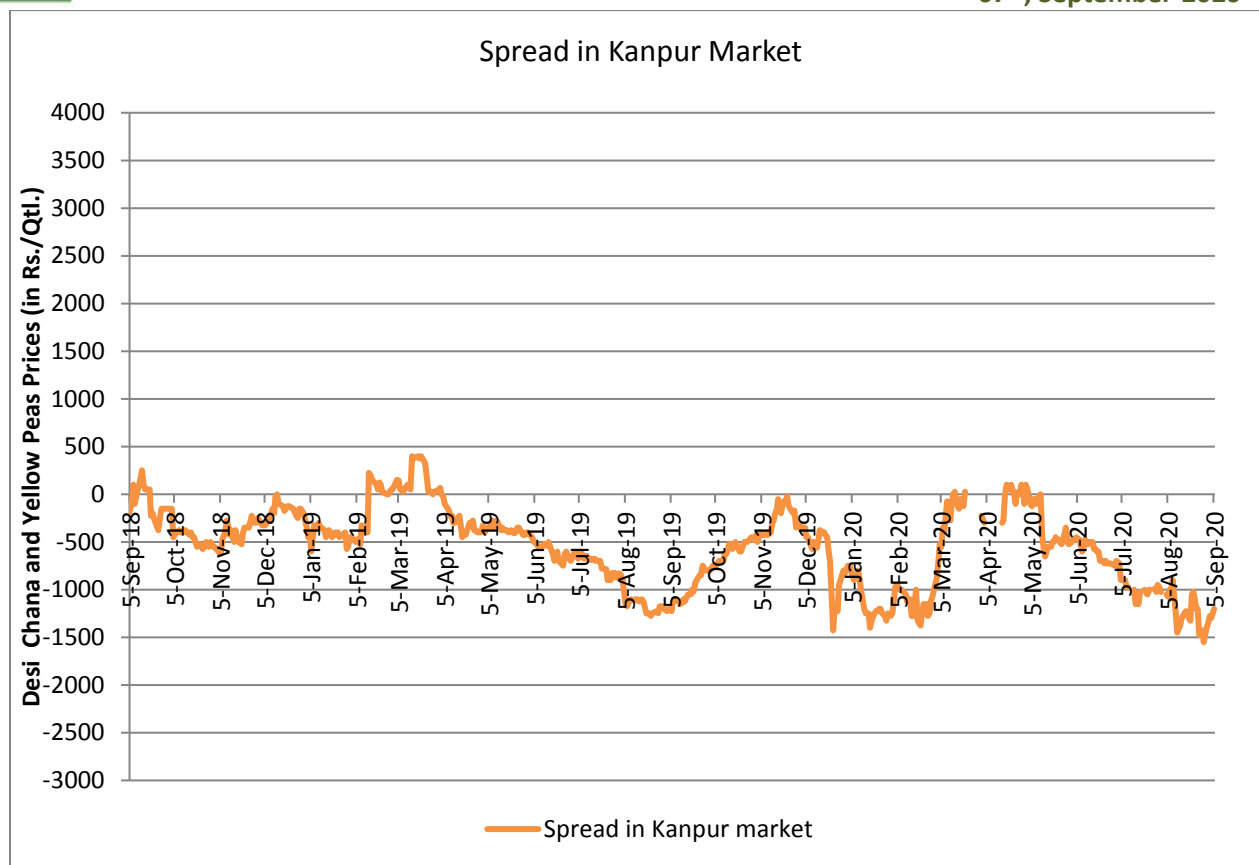

Peas in Kanpur market also traded up at Rs 6300-6400 due to halted arrivals in domestic market and almost no import during last four months. Stockists too are unwilling to release old stock because of lower production this year. It may continue to lend support to peas in Kanpur market. Demand for green pea is normal.

Current Market Dynamics & Outlook: Peas market traded firm due to decreasing availability in domestic market and firming chana price. Kanpur market traded up by Rs400 to Rs 6300-6400 per qtl. Any major spike is unlikely now. Recent release of pea at port may ease supply for a shorter period. So some downward correction is expected now. Overall, all India average price was up by 6.50% to Rs 6350-6450 per qtl. In Mumbai market, there was no quote for yellow peas as stock was exhausted. Demand and supply side is balanced right now. Canadian yellow pea is being traded at Rs 6100.

Spread With Chana:

Spread between Chana and Peas, at Kanpur market remained in negative zone. Gap has decreased slightly from Rs 1475 to Rs 1275 due to increased pea price. Spread is expected to remain in the negative zone in Sep too on relative movement in Chana prices. Overall outlook seems steady to slightly weak this week too.

Market Outlook: Outlook remains steady to slightly firm in the short to term.

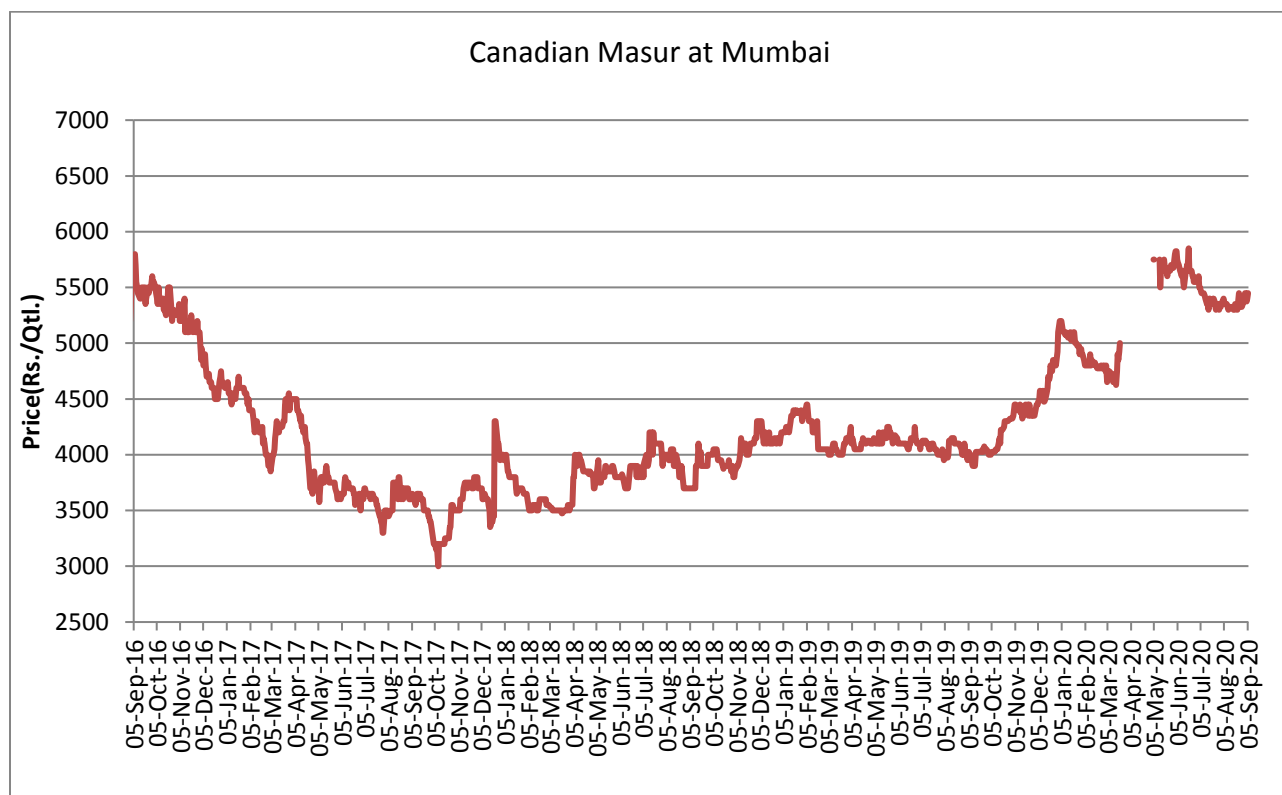

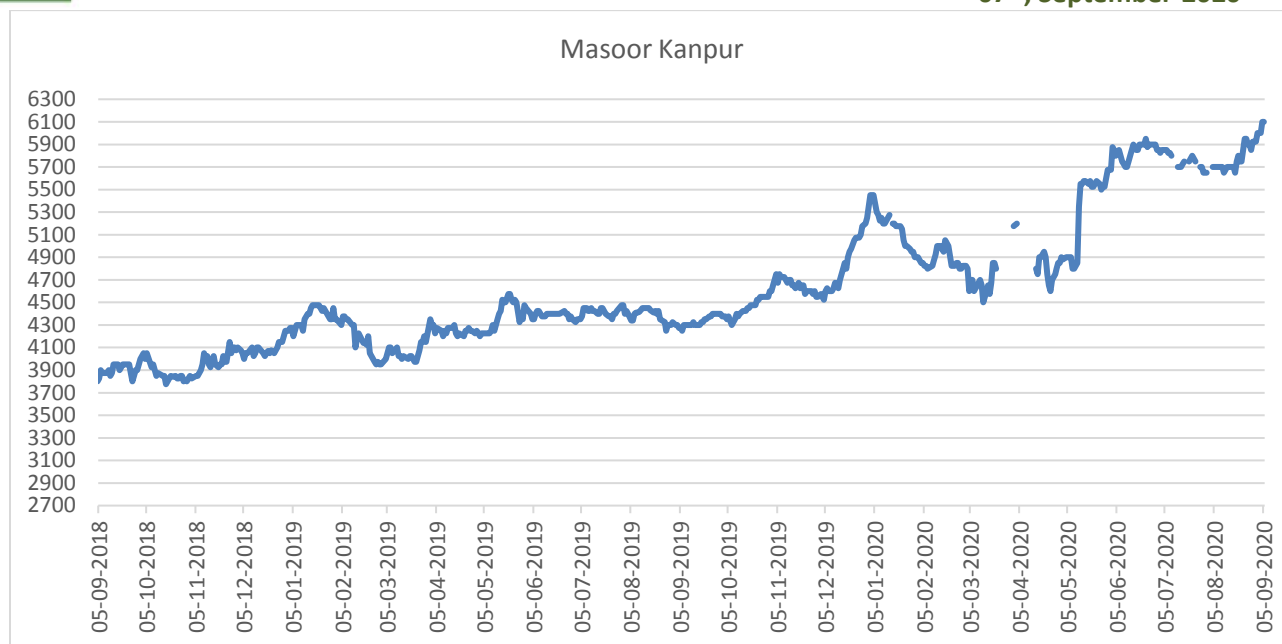

Lentils (Masoor):

Market Recap:

Increasing import flow of masur from Canada and Australia may put pressure on cash masur market. In July and Aug around 4.0 lakh MT was expected to hit Indian ports. Govt has restructured duty and restored it to 30 % , applicable from Sep. It has lent support to cash market. India imported 1.67 lakh MT lentils in July and the rest is expected in Aug. Data is awaited now. It is going to impact price directly. If prices decrease below Rs 5000 due to higher import volume, Nafed would not release old stock. In that case, some recovery is expected again in masur market. Notably, govt. had slashed the import duty on masur from effective 30 % to 10 % till 31st August-2020 to cool down prices in domestic market on the beginning of June. As duty has been enhanced again, prices may recover in lean season.

Current Scenario:

Stock at ports has started increasing now. At Mumbai ports importers are selling masur at Rs 5350-5450. As prices are ruling higher than MSP in domestic market, govt agencies are unable to procure 1.21 lakh MT, set target for the year. As of now, only 4200 MT has been procured on MSP (Rs4800). Old stock with Nafed is around 21,000 MT. future course of price depends on govt's decision on enhanced import duty,, applicable 30% after August.

Market Outlook: Prices may trade lower due to higher supply prospects from import in the near term. Sluggish demand from mills and commencement of offloading by stockists remains unsupportive to cash market right now. However, bumper kharif production prospects may cap any spike in the near future. Nafed may start selling old crop too, if required to check prices. It has 21,000 MT old stock. Overall tone in masur market remains weak in Sep..

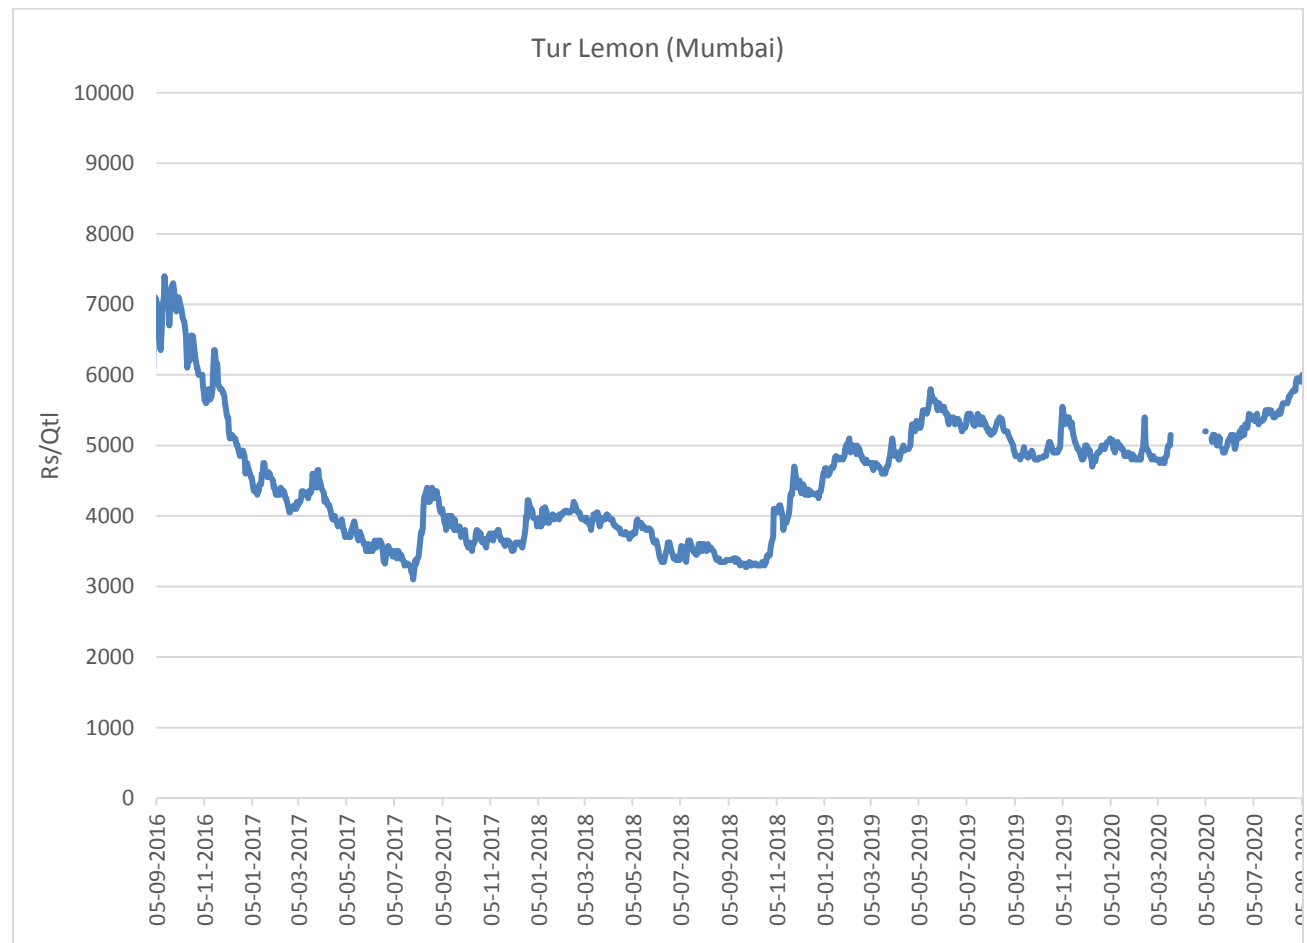

Pigeon Pea (Tur/Toor):

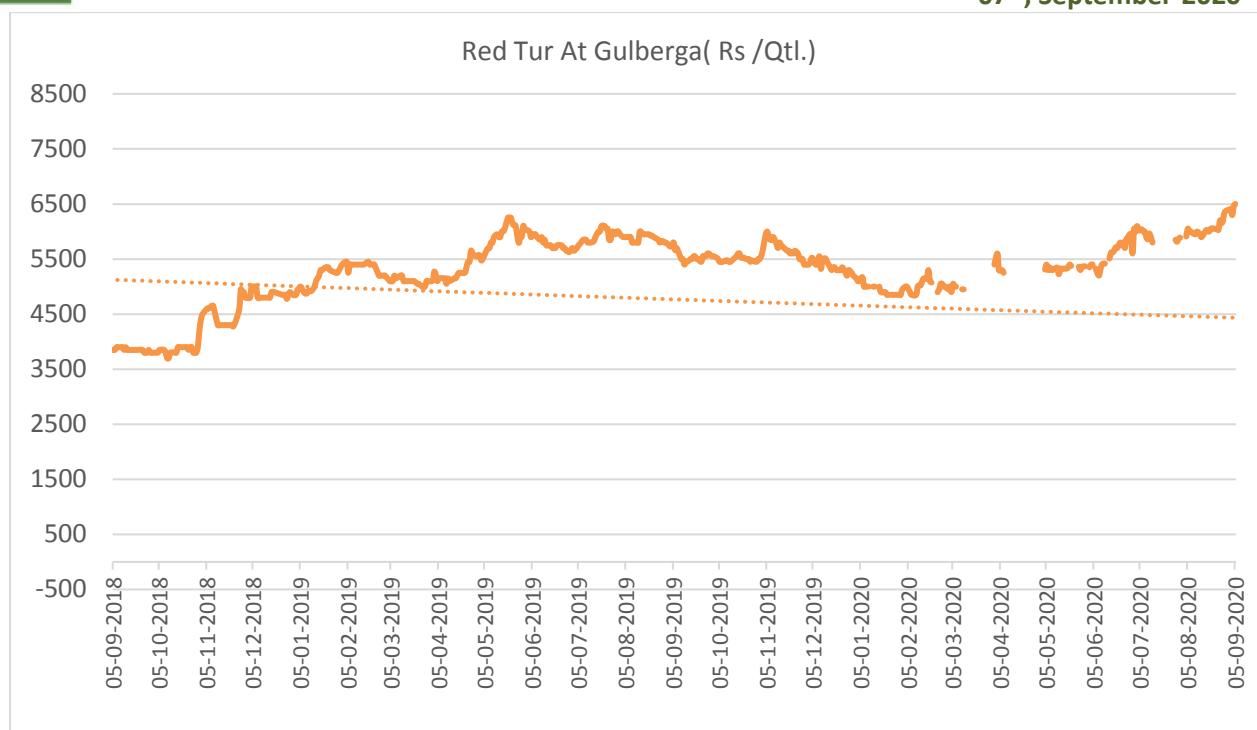

Market Recap:

Stocks at ports are said to be lower than normal at this point of time. Import licenses have not been issued to importers yet, so millers are buying tur from local markets. Arrivals in local market are decreasing so market is moving up slowly. Relaxation from lock down in various states has increased demand for dal and millers have increased buying. Tur was quoted at Rs5900-6150 in Mumbai market. It is being traded at Rs 6300-6450 in Gulberga market. Overall sentiment seems firm. As importers may start buying in Myanmar, tur price has stayed steady there at \$ 665 per MT basis Indian ports for new crop and \$645 per MT for old crop. Tur price may move further up by Rs200- from current levels.

Current Market Dynamics & Outlook:

The production share of tur in total kharif pulses production is 34.5 % and farmers have covered around 108 % (47.74 lakh ha) area of normal (44.29 lakh ha). Planting is almost over and area may end at 48 lakh ha. Higher offtake from mills and improved demand for tur dal amid lower pace of import have helped market to trade up by Rs 150-250 in various markets. Apart from renewed demand, arrivals in major markets are decreasing now amid restricted sales by Nafed and private trade. It would continue to support tur cash market this week too. Demand for tur dal may increase further in the coming weeks due to festive season despite good planting and crop condition so far. As import licenses are yet to be issued, volume of imports from allocated quota of 4 lakh MT is expected to be lower in Sep, even if licences are issued in the second half of the month.

In the first week of Sep-2020, average price in Gulberga market was up by Rs 200 to Rs 6300-6450 due to slower pace of import, improvement in demand for dal and improved buying by private traders. However, increasing kharif area and likely selling by Nafed may cap upward momentum in coming weeks. Import volumes (G to G basis) are likely to increase in Aug, while import licenses could be issued soon for private millers. Tur price is likely to trade firm in Sep.

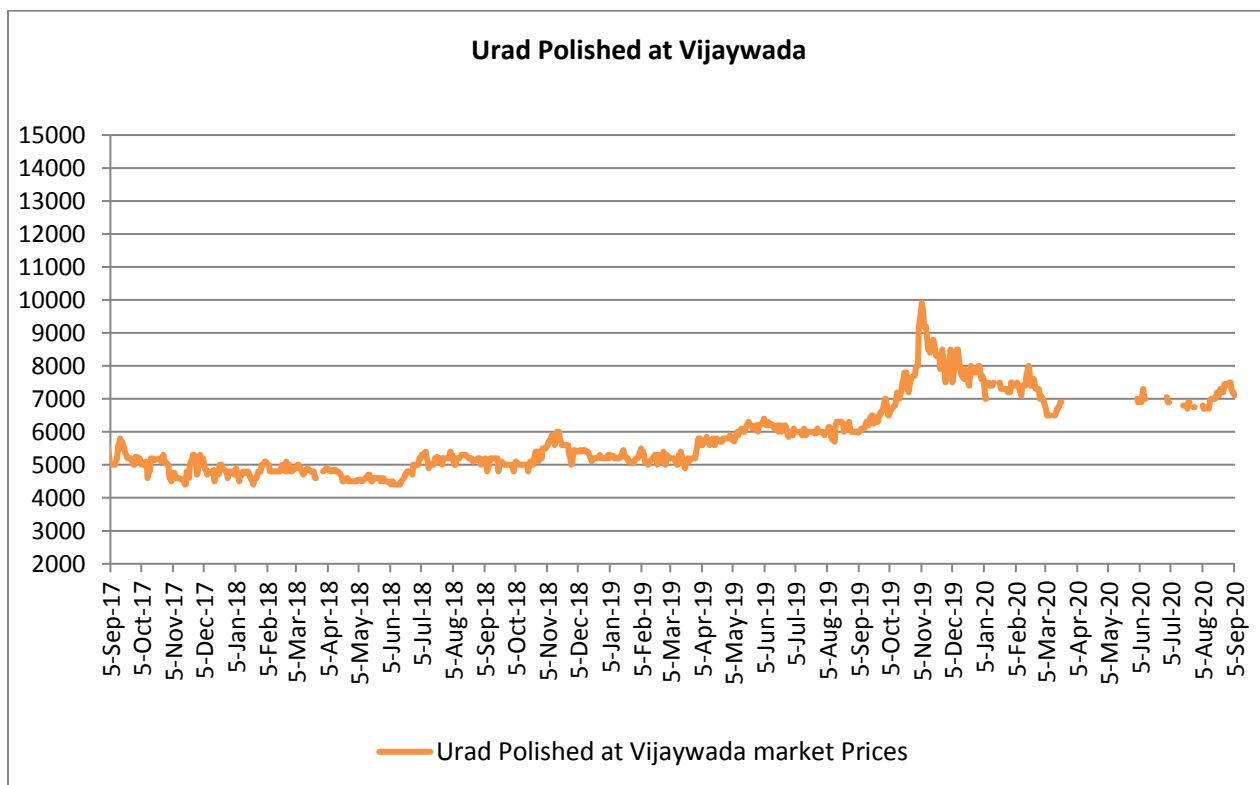

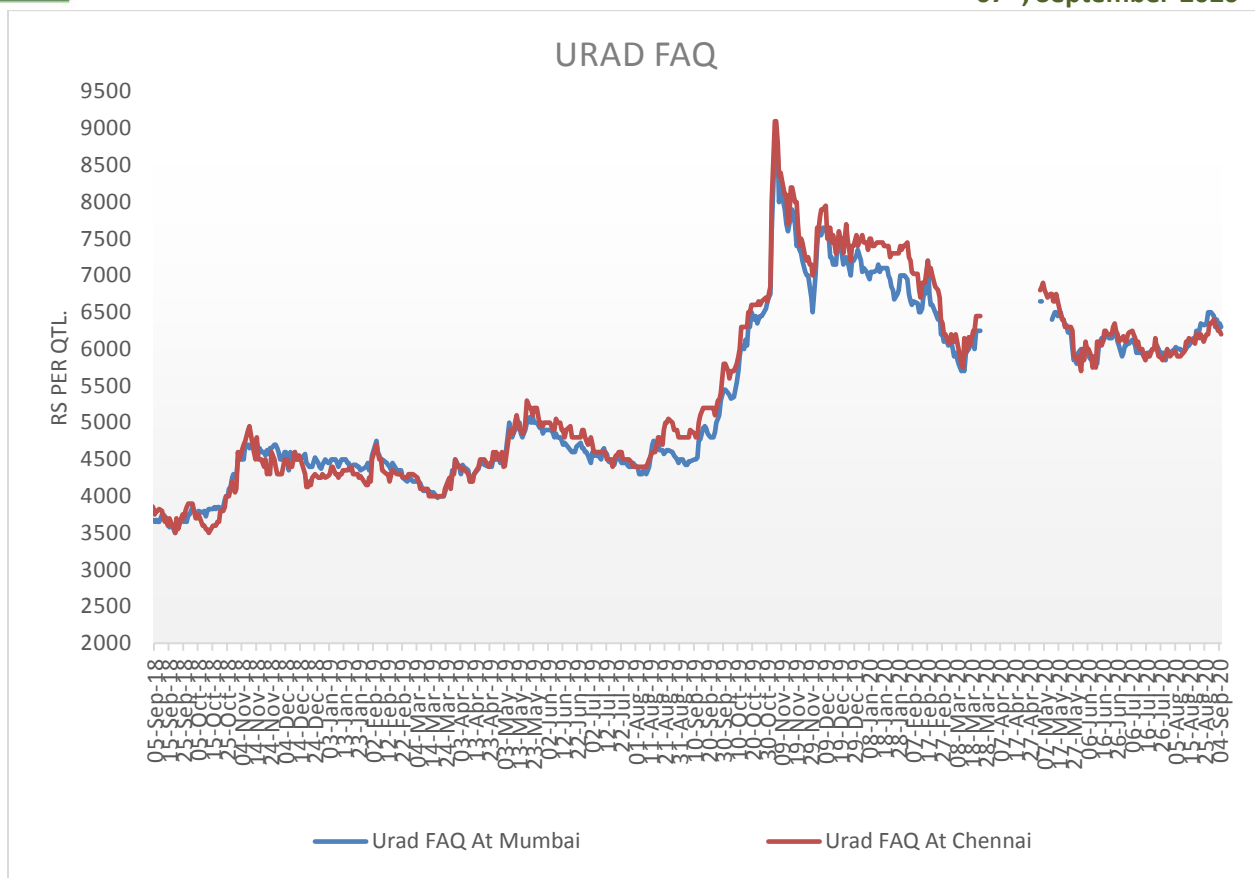

Black Matpe (Urad):

Despite some recovery in urad cash market uptrend is unlikely to continue as new crop is about to hit market from the second week of Sep. No major loss has been reported so far except some pockets of M.P, MH and Gujarat. Higher rainfall would not affect size but quality of the crop. Import flow of urad remained slow in August as margin for import is decreasing with declining prices in the domestic market and prospects of good kharif crop this year. Import time line has not been extended and it may cap market coming down below MSP. Quotes for FAQ urad moved down by \$5 to \$765 per MT while SQ stay steady at \$870 per MT basis Indian port. Prices in domestic market moved up slightly to Rs 6350 for FAQ and Rs 7000 for SQ at week end because of non- extension for import time line. If demand improves and new arrival is delayed, prices would increase against normal expectation. Arrival pressure from kharif crop is expected from third week of Sep.

Current Market Dynamics & Outlook:

The production share of urad in total kharif pulses production is 27.5 % and farmers have covered around 106.7 % (37.92 lakh ha) area of normal so far. Normal area of urad is 35.53 lakh ha. Planting is almost over now. Area in M.P.,MH & Kar has increased while it is down in Raj,U.p. & Telangana. However, overall area is higher so far. Due to heavy rains around 10000 ha area is said to be inundated. However it would not affect the final size of the crop. Overall, planted area is higher by 35,000 ha from last year.

Market Outlook: *Urad Prices are likely to show steady to slightly weak momentum.*

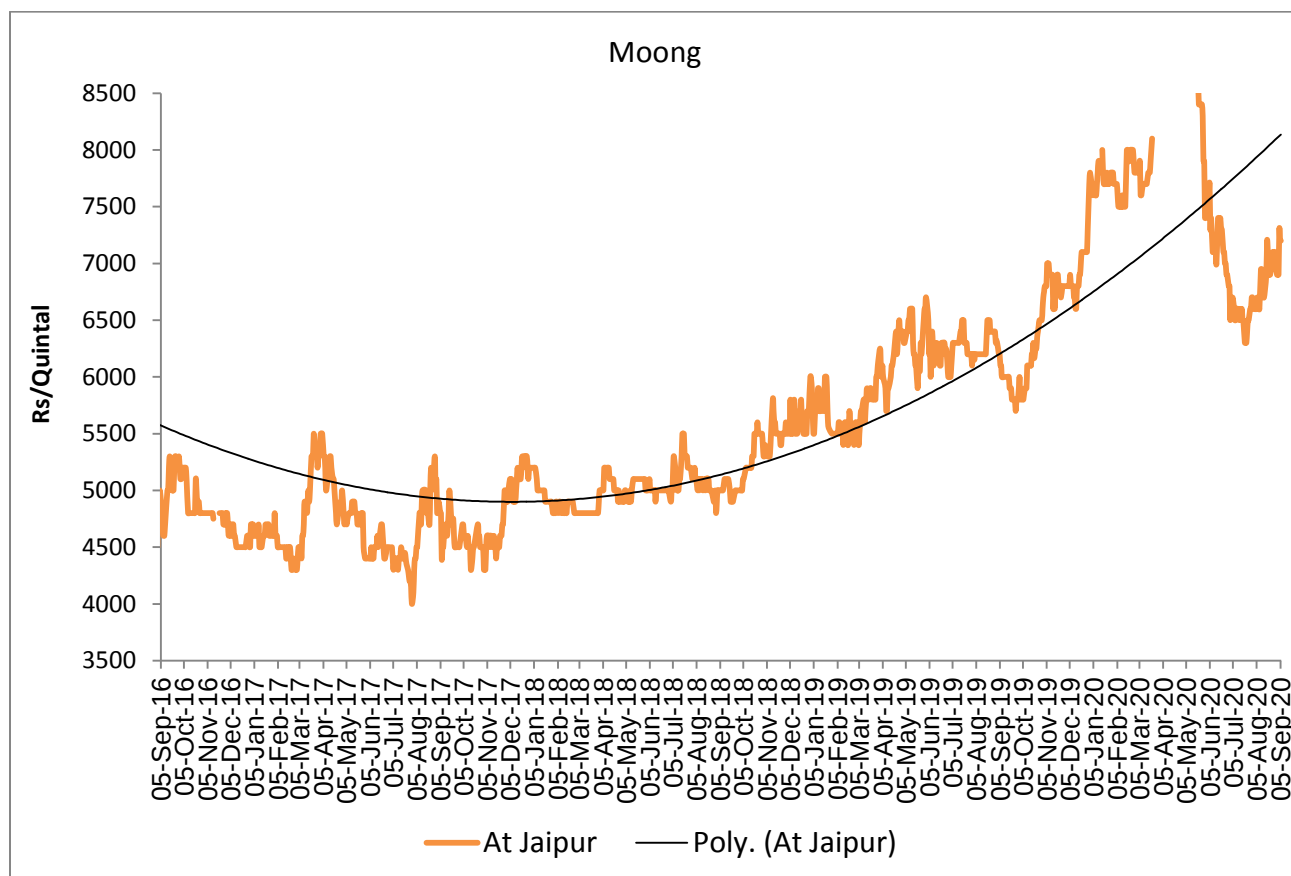

Green Gram (Moong):

Market Recap:

Prices are mostly steady and pressure might begin, as arrivals from new kharif season has started from Karnataka and MH. Besides, higher area coverage and good crop condition so far would not allow market to move up from current level. Arrival from MP is expected now, followed by Telangana and Gujarat. Arrival from summer crop is over now. If demand improves, slight recovery might be seen this week. There is no parity for import as moong price is ruling lower than Myanmar right now. Expected huge crop size in Rajasthan, stockists prefer to sell now So, overall trend seems weak in the medium term despite minor loss in Karnataka (2500 ha) and Telangana (650 ha) by flooding.

This year kharif moong area has crossed 2016-17 level (35.54 lakh ha) against normal of 30.49 lakh ha. Before this, maximum area was covered in 2016-17 when over 35 lakh ha was sown. Weather conditions are favourable for moong crop in all states except Karnataka and Telangana. Since the proposed MSP of moong is higher at Rs 7196 for 2020-21 against Rs 7050 for ongoing season, it would encourage farmers to cover more area under kharif moong. Under normal conditions, Agriwatch expects 15.50 to 16.00 lakh MT kharif production as per preliminary estimates after discounting the flood and higher rains generated loss.

Market Outlook: Moong prices are likely to trade steady to slightly weak in the near term.
