Commodity-wise Domestic, International Prices and Arrivals at Different Centers

Pulses Sector- Domestic Highlights:

All India Kharif pulses area continued to recover as expected and was up by 1.19 % to 135.83 lakh ha against 134.23 lakh ha last year as on 27th Aug-2021. Arhar area is up by 4.17 % to 48.94 lakh ha so far while Moong bean is running behind by 2.01 % to 34.16 lakh ha. Urad bean area recovered slowly and is almost similar to last year to 37.59 lakh ha against 37.61 lakh ha last year till date. Despite higher production forecast in the 4th Adv Est., Prices of Urad, Tur, Lentils and Moong have recover again and may move up further as arrivals of Moong and Urad are yet to pick up. Apart from this higher quotes in Myanmar for Urad, Tur and in Canada for Lentils amid improved demand from mills in the domestic markets have, barring some pockets of major producing states, lent support to cash dal market. Weather remains favourable as of now for pulses crops and the production in Kharif season may improve.

Lentils cash market traded up by 5.50 % to 7491 from the previous week in in Mumbai while it moved up by 4.22% to 7712 in Kanpur. Prices would move up further as the crop size in Canada is expected around 18 lakh MT this year against normal of 25-26 lakh MT. It has fuelled lentils prices in Canada to \$950-1000 per MT from \$750 one month earlier. Farmers in Canada are well aware of the global shortage this year and they are not willing to sell at the current prevailing prices. It may push up lentils prices further up and may reach at \$1050-1100 in coming months. Domestic markets too have started reacting accordingly and volume of import may decrease this year. At higher price demand for Masur dal may decrease, but prices would continue to rule at higher level. Masur whole price may go up to 9000/9200 in coming months. The lower crop size in India this year too is widening supply – demand gap.

Despite recovery in Moong area in major growing state like Rajasthan, crop size might be lower than normal expectation due to moisture stress prevailing in the most parts of the state. Yield may be down by 5 to 10 % from normal. As Rajasthan contributes 60 to 62 % in Kharif moong area, its impact on the total crop size would be even larger. However, in other states crop condition is normal to good. Arrivals have started in Karnataka & Maharashtra. Moong consumption is bound to increase this year as the lockdown is unlikely again in 2022. As the import is free, the volume may increase to 1.5 to 2 lakh MT in the ongoing season. Right now market prices are ruling below MSP, it may move up if the procurement starts. Govt.'s agencies have around 1 lakh MT stock while private trades may have 2 to 2.25 lakh MT stock. As quotes in Myanmar have decreased from \$900 to \$855 in last one month, an immediate spike is unlikely. Moong in domestic market is being traded in the range of Rs 6500-7000.

Urad area recovered during last two weeks and has reached at same level as was registered at this point of time last year. Some losses have been reported from Rajasthan and Madhya Pradesh due to excess rains. Moisture stress in Gujarat too may reduce crop size. The Urad crop is not attaining maturity stages and the Infestation of yellow mosaic in the region of Ashok Nagar in M.P. has increased concern over yield as the pods have started falling. New arrival is expected from the second week of Sep. If infestation is not controlled, crop size may decrease. So, the weather condition in Sep is very crucial. Inner tone in the market remains firm in the short term. Import may continue as Myanmar has 1.5 lakh MT old stock. Myanmar is offering FAQ Urad at \$885 and SQ at \$1025. So, the upward momentum would not continue in the medium term. Lean season, improvement in demand and reports of crop loss remain supportive for the Urad market.

Despite improved area coverage in Karnataka and good crop condition so far, weather condition in coming weeks is very crucial for Tur crop. Production was low last year due to rains during harvest in Karnataka and Maharashtra. This year production is expected to be around 39-40 lakh MT, higher by 2-2.5 lakh MT from last year. Likely higher demand this year would not allow Tur prices to slip from the current level. Crop condition in Gujarat is not good while low coverage in AP & Telangana too may push up price of Tur in coming months. Weather condition in flowering & pod filling stage would be very crucial. There is no import parity as the shortage of container is making import costly right now. Myanmar is offering Lemon Tur at \$890, higher by \$30 from the previous week. As crop is 3 months away, weather would remain crucial. Prices of Tur may move up by 200/300. Nafed has stock of 2.5 to 2.75 lakh Mt. Lentils Dal consumer may shift to other dal including Tur too.

Chana cash market traded up by 5% to 5521 from previous 5258 during the week under review. Demand for besan and dal is improving while arrival flow is low. As Nafed has ample stock of Chana, may continue to release chana to control price. Chana may improve slightly in the weeks ahead. Overall tone remains firm.

Global Market Updates:

According to Agriculture and Agri Food Canada (AAFC) August report, the production of lentil is projected at 18.85 lakh tonnes for 2021-22. July production estimate was 27.50 lakh tonnes while last year's production was 28.68 lakh tonnes. Huge decline in lentil production due to weather and drought. The end stock for season 2021-22 is expected to be only 50,000 tonnes against 4 lakh tonnes last year. Market expects production of Canadian lentil not more than 15 lakh tonnes.

According to Agriculture and Agri Food Canada (AAFC) August report, the production of Chickpea is projected at 0.87 lakh tonnes for 2021-22. July production estimate was 1.26 lakh tonnes while last year's production was 2.14 lakh tonnes. Decline in production is due to weather and drought.

In Manitoba grasshopper population thrive in some area due to hot and dry conditions. It is an additional threat to the pulses production along with heat wave condition. Due to prolonged record breaking heat this summer has deteriorated crop growing conditions in Alberta. Alberta and Saskatchewan government doubled low yield appraisal threshold for farmers who salvage cereal/pulse crop as feed. Saskatchewan, Alberta and Manitoba are major lentil growing states in Canada.

The heat damage to crops is broader in Manitoba, Saskatchewan, Alberta. As middle of Jul U.S. Department of Agriculture rated subsoil moisture in the state as 80% short to very short. Lentil production in Canada may decrease by 50% from normal 24-25 LMT to 12-13 LMT this year. In Saskatchewan lentil crop condition was 18% good, 40% fair and 42% poor till last week. Crop is in pod filling stage and facing extreme moisture loss. The current quotes for lentil are at \$750. It may move up to \$800-850.

Australia's first crop production forecast for a current season for five major pulses including chickpeas, fieldpeas and lentils released by Pulse Australia (PA), it is 2.28 Mt which is 23% below the 2.96 Mt produced last year. Chickpea area is forecast to increase by 11% to 5.65 lakh ha with production estimate 6.62 LMT. Forecasted area for peas is 2.38 lakh ha with production estimate of 2.7 LMT while forecasted area for lentils is 3.04 lakh ha with production estimate of 4.54 LMT. Australia's production is down this year on dry conditions.

Global field peas market traded firm on increasing fear of low production in the North America. Most of the producing region is facing dry and hot conditions, resulting in deteriorating crop ratings and accelerating plant

development in parts of the growing area. Grain size may be small and the yield low. Export movement has slowed down. Buyers are in a wait and watch mood.

Chickpeas market too traded up due to doubt over yields and quality in Canada and the US. However, desi chickpeas traded low due to poor demand from Pakistan and the Asian countries. It has affected chickpeas value in Australia too. India is not taking interest to buy Chana as prices have come down here below minimum support price.

Area planted for all chickpeas for the 2021 crop year is estimated at 341,000 acres, up 26% from the previous year, according to the USDA's annual seeded area report. Area harvested is forecast at 334,600 acres, 27% above 2020. Small chickpea area planted is estimated at 67,000 acres, up 38% from 2020. Area harvested for small chickpeas is forecast at 65,600 acres, a 37% increase from 2020. Area planted for large chickpeas in 2021 is estimated at 274,000 acres, a 24% increase from the previous year. Large chickpeas area harvested is forecast at 269,000 acres, a 25% increase from 2020.

The seeded area under dry peas is expected to be slightly higher at 1750 thousand ha in 2021-22 against 1722 thousand ha last year in Canada. However, yield may decline from 2.73 to 2.57 t/ha this year due to average yield expectation owing to the expected un conducive weather conditions. So, the production is forecast to decrease from 4594 to 4400 thousand tonnes this year. Total supply and the export figure too may decrease from 4927 to 4790 and 3800 to 3700 thousand tonnes respectively. However domestic use may increase from 827 to 840 thousand tonnes this year. The carryout to decrease from 300 to 250 thousand tonnes.

Lentils production in Canada is expected to decrease from 28.68 in 2020-21 to 2.7 MMT in 2021-22 due to slightly lower area & yield. Export too are expected to decrease by 2 lakh MT to 25 lakh MT in 2021-22. Total supply is expected to decrease from 31.82 to 29.25 lakh MT due to likely lower production in 2021-22. Against it domestic usage. However, domestic use would decrease from 3.27 to 2.75 lakh MT in 2021-22. So carryout stock would stay at same as last year at 1.5 MT. Average yearly price is expected to be in the range of \$ 585 per MT. For 2002-21 it is \$ 600 per MT.

Weekly Outlook: -Pulses are likely to trade steady to slightly firm in Sept.

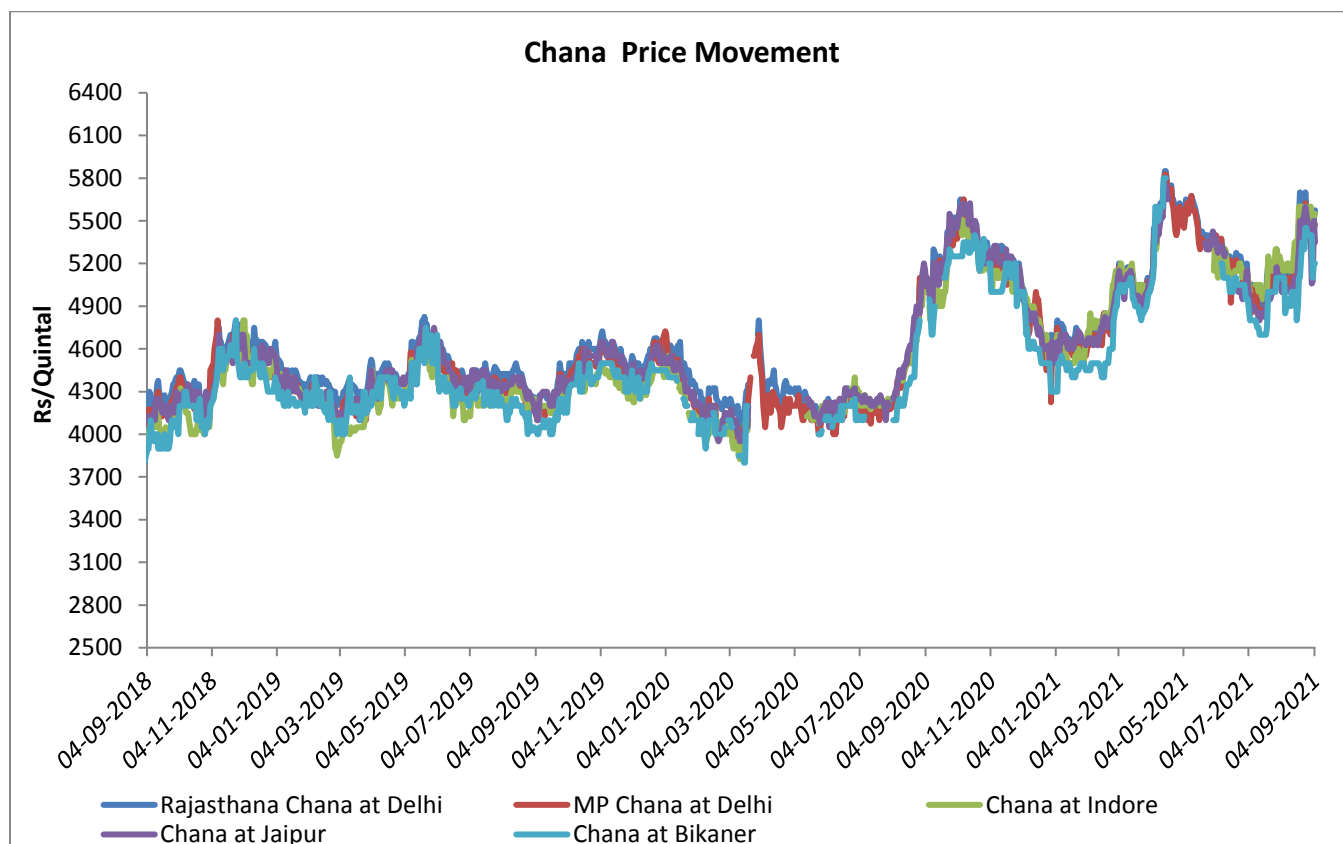

Pulses-Wise Scenario:

Chana

Current Scenario:

Chana cash market is likely to recover once again with the help of emerging demand for the dal and besan in the festive season despite downward pressure seen in the review week. The current downward movement is a temporary phenomenon and will not last long. Mills may start buying in bulk volume again while stockists are unwilling to release stock at this point of time. Despite hope for recovery soon, Nafed will on the driving having ample stock to control the price. Release by nafed is likely to continue and it would cap any spike in the cash market. With improvement in prices farmers too may start releasing stock as they would be in need of money for rabi sowing. Apart from this Chana from the south African countries would continue to enter into India. Supply side seems balanced right now. Chana price may recover by Rs.200 and may cross 5400 by the end of the month.

Import flow would remain restricted as duty plus cess is 60%. Import flow may continue from the least developed countries as they enjoys benefit of zero duty. Following graph illustrates chana price movement in different markets:

Chana Weekly Technical Analysis:

Technical Commentary:

- Decreasing price & decrease in OI indicate weak momentum in futures market.
- RSI is steady and indicate sluggish buying, hints weak movement.
- Prices closed above 9 and 18 days EMAs, volume has gone down.
- Candlestick chart hints weak momentum.

Strategy: Buy on dip

• Do not carry forward stock for next week.

Peas (Matar):

Market Recap:

After a declining trend peas cash market started recovering once again taking cue from the improved chana market in last few weeks, barring Friday & Saturday last week. Prices have increased by Rs. 300 to 6000 from the previous week. As import is not allowed, stock in the domestic market is depleting fast. Stocks are either with stockists or with traders. Harvesting has started in Canada and import is not possible due to the import restrictive policy by India. Govt is not going to allow peas import in the near to medium term. Overall tone remains firm.

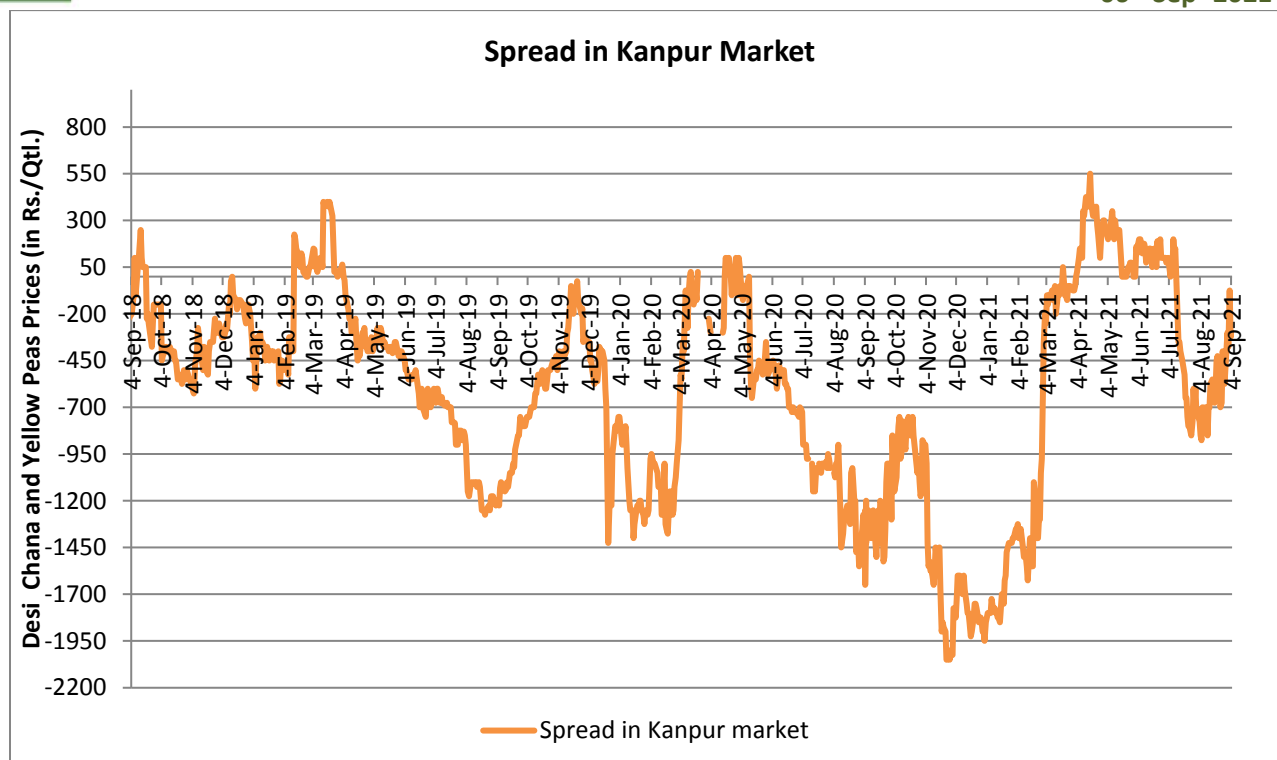

Following chart shows price movement in various markets:

Current Market Dynamics & Outlook: Peas market traded slightly up during last week. In Kanpur market it was quoted at Rs 6000 per qtl on Saturday. Overall, all India average weekly price was up by Rs 300 to Rs 6000 per qtl. In Mumbai market, there was no quote for yellow peas as stock has been exhausted. There is no quotes for imported peas as availability is almost nil.

Spread With Chana:

Spread between Chana and Peas, at Kanpur market continued to remain in negative zone. Gap has decreased slightly to Rs 350 now. Spread is expected to remain in the negative zone in Sep too on relative movement in Chana prices. Overall outlook seems steady to slightly firm in the near term.

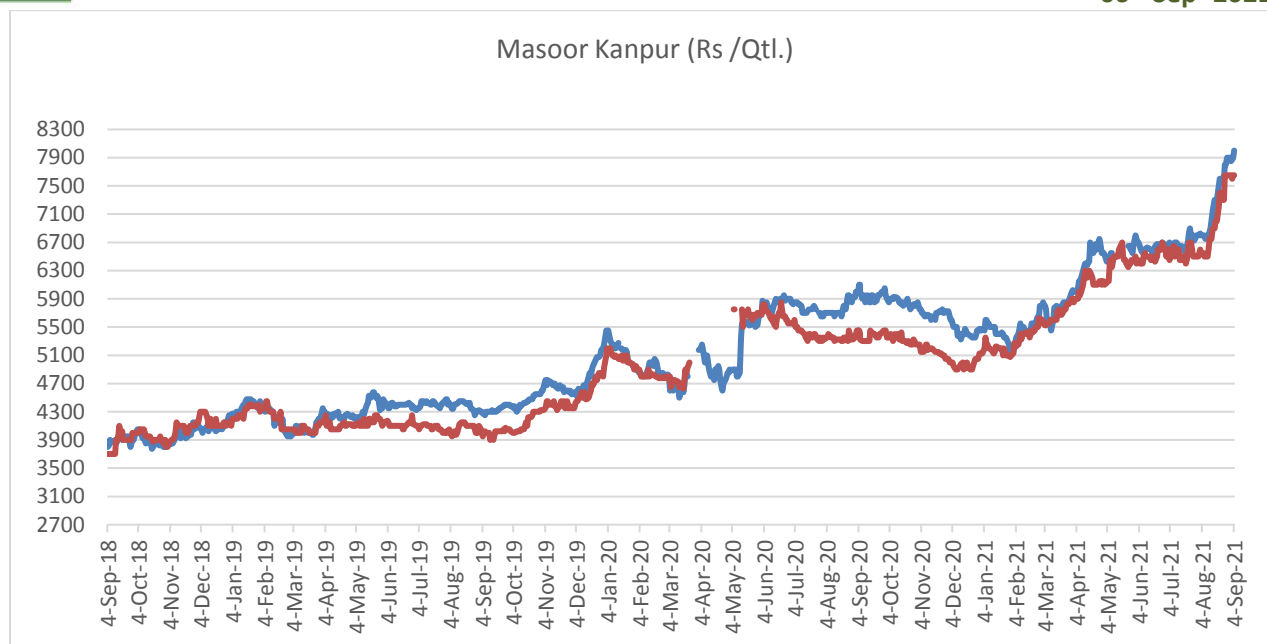

Lentils (Masoor):

Market Recap:

Govt may allow Masur import from the Black Sea Region and a meeting with Australia and Canada is expected next week and govt seems serious to source lentils where it is available, to calm down the increasing prices. The cash Masur market traded up by 3.15 % at Rs 7904 in Kanpur market while imported stock traded at Rs 7650 in Mumbai market. Demand is yet to increase. Government has reduced the duty on Masur from 10% to 0 while cess has been reduced to 10 % now from 20 % . This means now importers have to pay 10 % as cess. As crop size in Canada is small, import cost would continue to move up in the coming months Sep onward supply from Canada may start from the new crop. But it would not help market to decrease much as expected right now.

Current Scenario:

Market is bound to move up. Govt may try to increase supply through contracting deals to supply pulses. However, any immediate relief is unlikely at this point of time due to the low production size this year in India. Supply side is tight.

Red colour shows the imported Masur price

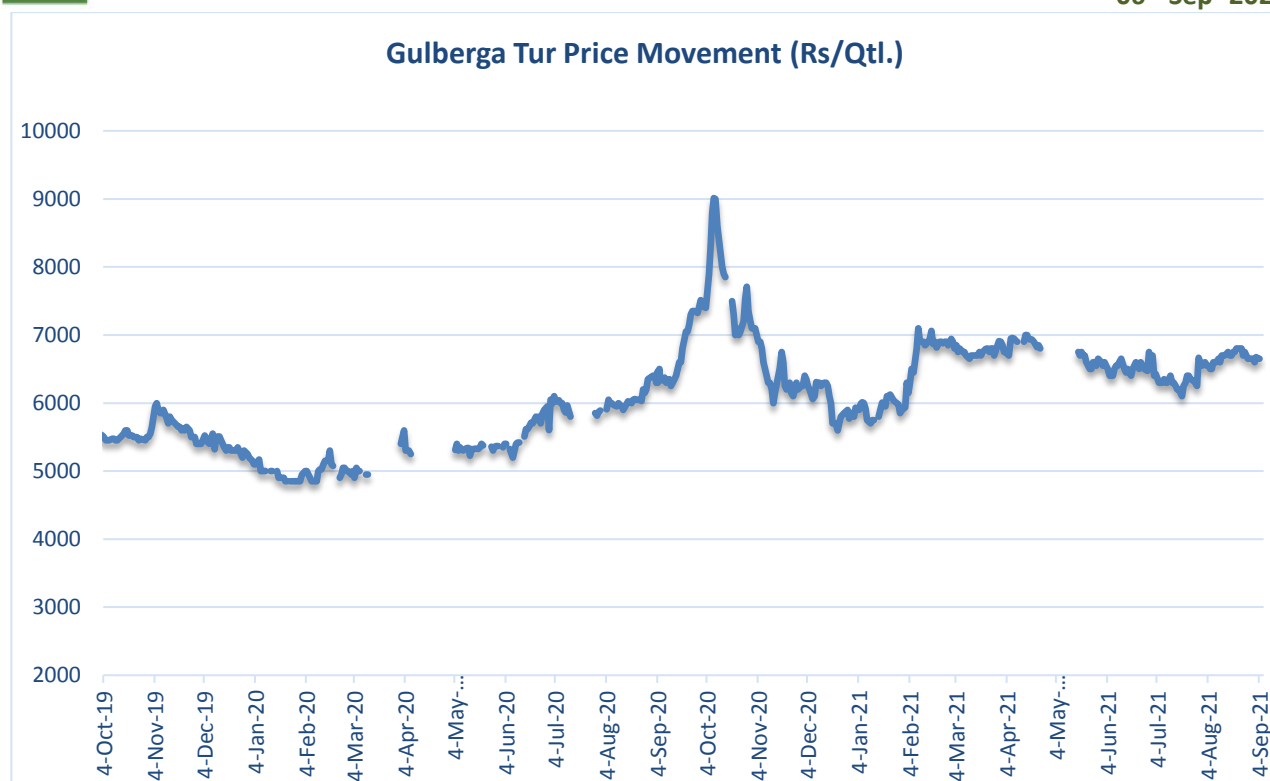

Market Outlook: Prices may trade steady to slightly firm.

Pigeon Pea (Tur/Toor):

Crop condition of Tur is normal to good so far and yield is expected to increase in major growing states. Tur price in Gulbarga market. Prices decreased last week by 1.55 % to 6650. As supply side is balanced and demand is likely to improve, prices may recover again. Demand from mills have started improving and the new crop would hit the Indian markets in the end December. However, heavy rains in post monsoon season may damage crop as the sep and October are the flowering time for Tur crop. Weather condition would remain crucial in Sep-Oct. Increased rains frequency in the fag end of the monsoon season may increase concern over the final size of the crop. If rains continues, situation may be deteriorat. It may support Tur price in coming weeks. Tur in Gulberga market traded at Rs6650- 6700 per qtl and may touch to Rs 6900-7000. In Mumbai it is being traded at 6600.

Current Market Dynamics & Outlook:

Lemon Tur is available at Rs.6600/qtl at Mumbai port. The import flow is expected to increase in Sep as few importers who had purchased earlier may hit Indian port this month. India imported 26380 MT in June. So far India has imported total 38000 MT from April to June-2021. In July import volume is expected to increase to 40,000 MT. Supply side is at comfortable level. So any spike in cash market is unlikely.

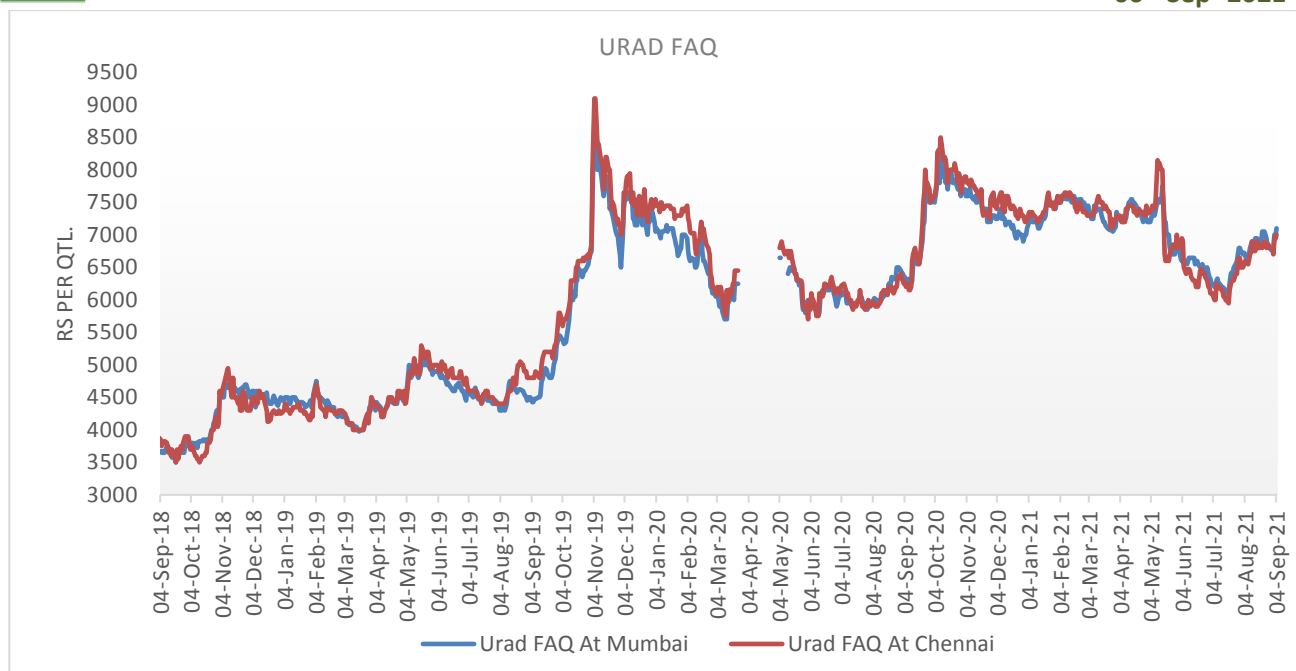

Black Matpe (Urad):

In Chennai and Mumbai market Urad prices moved up by 100-150 to 7800-7900 and 7800-7850. The uptrend is likely to continue as rains expected this week may damage standing crop ready to be harvested. The low stock at port and limited volume of import too is pushing prices up. As prices of Urad are already up and harvesting has commenced, so limited scope is for any spike at this level. Weather remains crucial and stakeholders need to have a close eye on weather condition in major growing belt. Some damage has already been reported from Kota, Baran and Ashok Nagar region. Imported Urad traded at Rs. 6800-6900 at Mumbai while the local crop in Tamil Nadu traded at Rs 6750-6850. Myanmar is offering Urad FAQ at \$885 and SQ at \$1025. Demand is picking up. India would import 2.5 lakh MT Urad from Myanmar as a MoU has been signed between the two govt for next five years starting from April-2021. Apart from this 1 lakh MT Tur too would be imported with similar condition that has been set for Malawi. It would ensure better supply side in the market.

Current Market Dynamics & Outlook:

Major Urad crop comes in kharif season. Farmers have covered 37.94 lakh ha so far slightly up from 37.84 lakh ha. last year till date. As availability in Myanmar too is low and so any big decline is not expected before the new crop hits the market. The ongoing rains have potential to damage crop ready to be harvested. India imported around 83000 MT urad in from April to June-2021. Import is free now, so when parity turns in favour of India, the volume of import may increase.

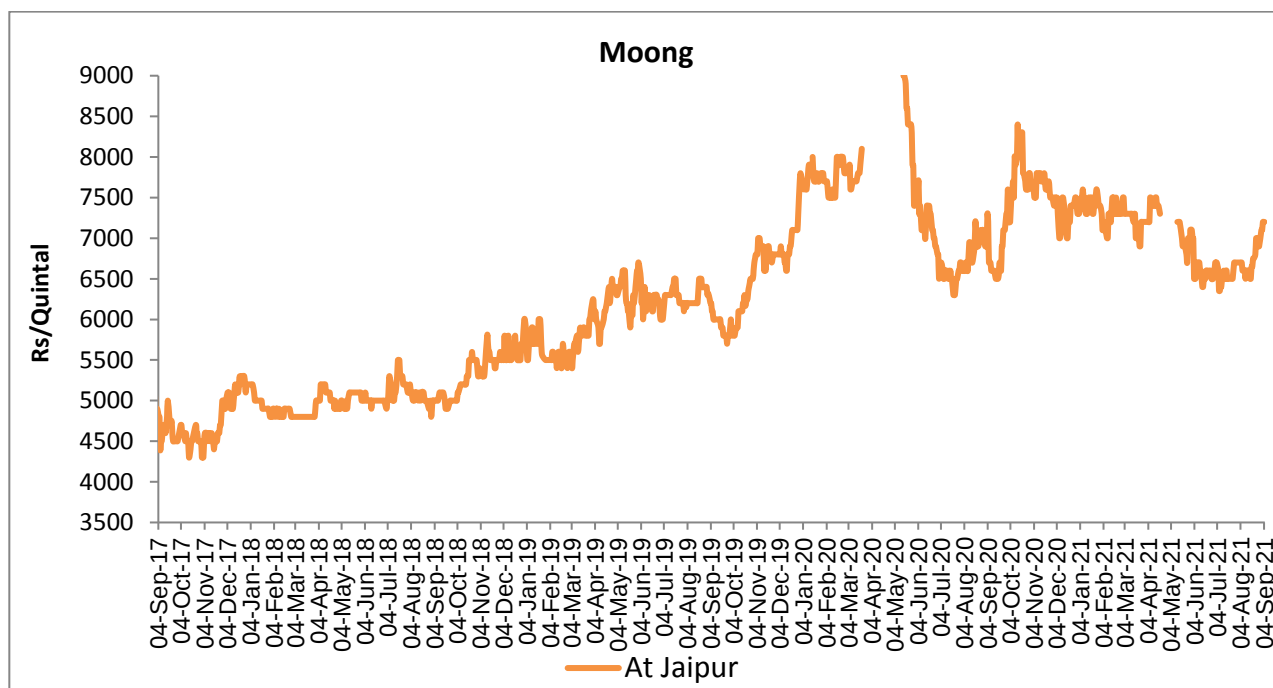

Market Outlook: *Urad Prices are likely to show steady to slightly firm momentum this week.*

Green Gram (Moong):

Market Recap:

Due to area loss in Karnataka and Maharashtra by flooding Moong may trade up in coming weeks. Import volume is low while demand is yet to improve. The production prospects have deteriorated. So, firm sentiment is expected in the cash moong market this week too.

Market Outlook: Moong prices are likely to trade steady to firm in the near term.
