

**Kharif Sowing Scenario:**

- After a late start and slow pick-up, monsoon rains seemed to gain momentum in the last week of June, though the overall rainfall deficit continues across South India and most parts of the country. This is an active phase of the monsoon. Heavy rains are expecting till the first week of July which is likely to be favorable for the Kharif Sowing.
- Farmers are expecting a delayed start of Red Chilli sowing, with a delay of 20-25 days observed in most growing regions. However, favorable monsoon conditions have raised hopes for the sowing process to commence next week.

**RED CHILLI**
**Fundamentals:**
**Today's Update:**

- Mostly steady sentiment was reported in the Red Chilli spot markets on Wednesday.
- Farmers are offloading their stocks which they are not keeping in the warehouse stocks and hence currently cold-storage variety are less as farmers are waiting for improved market demand. Due to which Teja variety are trading up due to lower arrivals with strong demand in the market.
- AgriWatch forecasts a medium-term price rebound driven by increased demand from export markets such as China, Malaysia, and Bangladesh, along with the demand from masala millers and Chilli Oleoresin companies and hence these factors are expected to support market arrivals.

**Previous Update:**

- In the long term, the market is anticipated to experience a decline due to higher production levels and ample availability of premium quality. It is projected that prices may decrease by INR 2,000-3,000 in the long term.
- As per AgriWatch estimates, Red Chilli all India production for 2023 is estimated at 15.56 lakh metric tonne (LMT). Last year's production was 14.07 lakh MT, up by 10.59%.
