

Domestic & International Market Highlights:

- **Corona has Less Effect on Paddy Cultivation in Myanmar:** Although, like many countries of the world, there is a serious outbreak of corona virus disease in Myanmar, but paddy cultivation is not affected much. The good monsoon rains are helping farmers to plant paddy, but farmer's economic condition is very weak and they are finding it difficult to get government loans. Compared to 2018-19, there was an increase of 4 lakh tonnes in export volume. Rice exports from Myanmar are expected to rise above 2.5 million tonnes by the end of the current financial year, ie, 30 September 2020.
- **Uttar Pradesh farmers expect bumper paddy crop this year with good monsoons:** While there is considerable gloom on the industrial front in Uttar Pradesh, paddy farmers in the state are expecting a good crop due to above-average rain this monsoon. After several years, UP farmers completed paddy plantation in more than 80 per cent of crop area in the third week of July. In most of the paddy-rich districts above average rain has been recorded this year in July. In most of the districts the plantation of early variety of paddy has been completed
- **Due to poor rains, Thai rice export prices strengthened fearing supply side constraints as millers hold on to their stocks.** The benchmark 5-percent broken rice price of Thailand has gone up from USD 440- USD 455 to USD 450- USD 482. The on-going drought and uncompetitive prices has compelled the Thailand's rice exporters association to revise its export forecast to 6.5 million tonnes in the year 2020. According to some other trader if it rains than prices might come down.
- **On the other hand, the exporters in India are facing logistical problems due to worsening Corona Pandemic.** The Kakinada Port, Andhra Pradesh which handles majority of Rice shipments for saw rising Corona cases thereby posing logistical problems for exporters. The prices of 5-percent broken parboiled variety remained unchanged in India at USD 377- USD 382 per tonne. Meanwhile, the summer sown area for paddy cultivation has gone up. The demand from importing countries of Asia and Africa is more or less stable.
- **All India Kharif sowing as on 24 July 2020 is reported to 21.96 million hectares which is up by 17.6% from last year corresponding period area of 18.67 million hectares.**
- **Kharif crops were sown in Telangana on 79 lakh hectare till July 22, 2020 which was 58.17 lakh hectares** during the same time last year. Paddy sowing has increased from 4 lakh hectares to 10.20 lakh hectares during the same period last year.
- **Punjab Government has urged Union Minister Ram Vilas Paswan to restore the commission of "arhtiyas"** (commission agents) to the statutory norm of 2.5 per cent of minimum support price (MSP). Any deviation from the existing policy could cause serious disruptions to paddy procurement process. The flat rate commission provided for rabi marketing season (RMS) was contrary to the statutory norm of 2.5 per cent of MSP. The chief minister requested Paswan to accordingly amend the provisional cost sheet for RMS 2020-21, issued by the Department of Food and Public Distribution, Government of India. As per the sheet, arhtiyas' commission has been allowed at a flat rate of Rs 46 per quintal, which appears to be based on certain estimates of the actual expenditure incurred
- **More farmers seek to shirk paddy, Haryana eyes 12% water savings.** Haryana government hopes to save 12 per cent water this crop season, with farmers applying to shift to alternatives to the water-guzzling paddy, like cotton, bajra and maize in over 2.86 lakh acres under the government scheme 'mera pani-meri virasat', this year. It is a matter of great satisfaction that farmers have given their consent for growing alternative crops other than paddy in over around one lakh hectare (2.47 lakh acres) of land. Around 12-13 per cent water will be saved this way,

said Haryana Chief Minister. Paddy is cultivated in about 30 lakh acres in the state. This includes water savings from all sources including canal and underground water which is pumped through tubewells for the paddy crop. However, an official of the agriculture department cautioned to wait till July-end, when the transplantation of basmati variety of paddy will conclude. The alternative crops require 80 per cent less water than the needs of paddy cultivation

- Paddy sowing Shows a Decreasing Trend in Andhra Pradesh:** On the back of a normal monsoon in the State, the cultivation target for paddy in the kharif season is 15.90 lakh hectares. It is less than the last year's target of 16.25 lakh hectares. In fact, the target was less last year also when compared to the 2018 kharif season which was 16.26 lakh hectares. Normal sowing during the season was 16.03 lakh hectares in the 2016 kharif season. Now, the normal sowing during the season is just 14.97 lakh hectares. The normal sowing has been on decline since 2016. Districts such as East and West Godavari and Krishna, which are known for paddy cultivation, have shown a decline trend in paddy sowing. For instance, the normal paddy sowing in Krishna was 2,45,279 hectares in 2016 kharif. It has slipped to 2,30,375 hectares now (2020). Similarly, it was only 2,23,431 hectares in East Godavari as against 2,29,617 hectares in 2016. Likewise, the normal sowing was 2,38,524 hectares in West Godavari in 2016 and is now 2,27,161 hectares
