

Domestic Market Highlights:

- Market remained rangebound during the day in most of the markets due to fresh arrivals.
- Market remained rangebound during the week under review due to fresh arrivals coming in the mandis and reduced participation of buyers.
- As of 29th November, G.O.I. has freed the organic non-basmati rice (including organic non-basmati broken rice) from export restrictions and now the trade will be done according to the rules that were in place before the September export restriction.
- As of sources, Punjab has purchased 17.34 lakh tonnes of basmati till last week, which is 3.21 lakh tonnes (18%) higher than the total amount of basmati that arrived in the previous season.
- Meanwhile, at benchmark Narella market, the weekly average price of Sugandha rice has increased by 2.72% to Rs. 6,875 per quintal, whereas, the prices of 1121 steam are trading marginally low by 0.5 % to Rs. 8600 per quintal.
- Export price of 5% Broken Parboiled Indian Rice remained unchanged at \$373-\$78 per ton from last week despite strong demands from importing countries. Even after paying the export duty, Indian rice is less expensive than the other exporters. Exporters have a limited supply since the Indian government has been actively purchasing farmers' new season paddy. India has increased the MSP for new-season common rice paddy by 5.2%, the largest increase in five years.
- As of 15th November 2022, FCI procured 252.30 LMT of paddy for the central pool during the current 2022–23 kharif marketing season against the season's target of 550 LMT. Although rice purchases have decreased over the past two weeks, overall purchases have increased by 2% until November 15. As of October,1 compared to the same period last year, procurement agencies' rice procurement, which started on October 1 for the current marketing season, were up by 12%.
- Export for the month of October,2022 decreased at 9.05 LMT by 24.39% as that of September,2022 due to the export restrictions.
- As per sources, till November 11, Punjab purchased 167.06 lakh tonnes of paddy, around 17.11 lakh tonnes less than it did at the same time last year. Due to the uneven rain, harvesting was delayed this year as it was previous. The government purchased a total of 187.86 lakh tonne (LT) of paddy on November 15 of last year, even though the procurement is still ongoing this

year and is anticipated to end next week. Punjab set a goal for itself this year to buy about 18 LT (18 million tonnes) of paddy, and the state has already bought almost 92% of that amount.

- The consignments of broken rice that arrived at the container freight station (CFS) prior to the cereal's export embargo have been cleared for transportation with the support of the Customs authorities as of notification given on November 7, 2022 by the DGFT (G.O.I).
- As per sources, the government purchases Parmal varieties on the MSP, and their arrival this year in the district's numerous grain markets has outpaced that of the same duration last year. The Haryana State Agricultural Marketing Board (HSAMB) has requested that the district government impose a prohibition on the distribution of gate passes to farmers visiting the grain markets because they suspect the acquisition of paddy from other states.
- As per sources, the first advance estimates of production of major agricultural crops released by the Union Ministry of Agriculture and Farmers Welfare on 21st September, 2022, the production of kharif rice in India is expected to reach a record 104.99 million tonnes during the 2022–23 season, down by 6% over what was harvested during the previous harvest season.

Domestic Market Outlook (Non-Basmati):

- As per prevailing market fundamentals, arrivals of non-basmati have almost come to an end so, it is expected that domestic prices would remain improve in near term.

International Market Highlights

- As per sources, the revival of the European market and the introduction of new markets, such as Bangladesh, have led to the Cambodian Rice Federation's expectation that rice exports will increase in 2023. From January through October of this year, Cambodia exported 509,249 ton of milled rice, an increase of 10.6%.
- Vietnamese 5% broken rice's price per ton traded up at \$438 as compared to \$425-\$430 last week due to tight supplies. Prices will continue to rise through the end of December due to low stock levels and increased demand from China and European nations.
- Thailand's 5% broken rice prices shrunk to \$419-\$425 as compared to \$410- \$425 last week because of exchange rate. Demand from abroad remained constant and no significant agreements were being made.

- According to sources, Vietnam's rice exports increased by 22.3% from the previous month to 713,546 tonnes, and by 17.4% from the same period last year to almost 6 million tonnes, worth \$2.95 billion.
- As per sources, Bangladeshi market prices for rice this year hit a record high. While the price of rice fluctuated in the past, individuals had flour as a substitute (ata). Low-income individuals are in crisis this year as a result of the rising cost of flour, which has increased to Tk 65 per kg. Rising production costs are a domestic element that contribute to higher rice prices.
- As per sources, Vietnam exports 6.07 MMT of rice valued at 2.94 billion USD, an increase of 7.4% in value and 17.2% in volume during Jan-Oct, 2022. During the time period, export prices decreased by 8.3% from the same time last year, averaging 484 USD per tonne.
- According to sources, Vietnam's rice market is currently at its high, which helped the nation generate \$3 billion in export revenue during January-October 2022, and it is expected to increase further.
- As per sources, it is likely that Bangladesh, which has been working to lower high domestic prices after floods earlier this year damaged 254,000 tonnes of rice, will suffer as a result of Cyclone Sitrang's destruction of rice fields on 6,000 hectares.
- According to sources, Thailand's main rice harvest for 2022–23 would most likely be harvested two weeks later than usual due to floods as a result limiting output for the season, which typically starts in early November.
- As per sources, to ensure a sufficient supply at times of global food shortages and emergencies, the Philippines will increase its budget for rice buffer reserves by almost 70% the next year.
- Major crops like cotton and wheat have been harmed by the weather, but most of the rice crop has been spared, and Pakistan is on track to meet its 4.8 million tonnes export goal this season.
- As per sources, this year's floods in Pakistan affected the non-basmati growing region, but the basmati belt remains unaffected and has suffered no damage. Due to Pakistan's currency's sharp decline, basmati rice export prices are currently very competitive against India, which has a negative impact on India's pricing and export demand.
