Global rice production in 2020/21 is seen at a new high, led by gains in Asia, although stocks could contract for a second successive year due to record use. Reflecting bigger crops in India and China, output in 2021/22 is predicted to expand by 2%, to an all-time peak. Population growth is seen underpinning record demand, but this could be tempered by lower feeding in China. Global inventories are likely to resume an upward trend. With sizeable shipments to sub-Saharan Africa anticipated, trade should stay high, at 47m t.
