

Sugar & Gur Domestic & International Fundamentals**Recent Update:**

Indian Sugar market showed steady trend compared to previous day across India. Overall the prices are expected to be steady due to lower demand. Kolhapur sugar market stood steady at Rs.3200/q as new stock has arrived in the market and U.P's Khatauli market prices stood at Rs.3240/q.

Government fixed the monthly sugar sales quota as 21 LT for March month to 545 mills higher by 1 LT compared to the previous month that stood at 20 LT. Also, the allocated quota is 3.5 LT lower at 24.5LT in the same time previous year. In the previous month, the sugar millers have reported that there was moderate demand due to higher stock piles and lower sugar production this year. The millers are holding their stock and waiting for the prices to rise and demand to increase with the commencement of summer season and prices to be firm. While 3 sugar mills faced action against them for selling excess sugar from the monthly sugar sales quota.

Weather Forecast:

During the next 24 hours, we expect fairly widespread rain and snow in the hills of Jammu and Kashmir, Ladakh, Himachal Pradesh, and Uttarakhand. Scattered light to moderate rain is also expected in Punjab, Haryana, West Uttar Pradesh, Delhi and NCR, and at a few places in North Rajasthan. Coastal Karnataka and Kerala may also observe scattered light to moderate rains. While isolated rain is likely in Coastal Andhra Pradesh. North Madhya Pradesh may also observe isolated light rainfall activities.

Previous Updates:

ISMA revised its sugar production from its November estimates of 26 million tonnes to 26.5 million tonnes in February month during 2019-20 SS. According to Agriwatch estimates, in 2019-20 SS India likely to produce around 26.2 million tonnes of sugar. Out of which, around 123 LT of sugar production likely to produce from UP (up by around 4%) followed by 60LT of sugar from Maharashtra (down by 45%) and around 35 LT of sugar from Karnataka (down by around 20%). With an expected ending stock of 7 million tonnes according to Agriwatch estimates compared to 6 -10 million tonnes surplus by ISMA at the end of the sugar season 2019-20.

The sugar exports since last year was suspended to Indonesia due to the quality standards. A deal was signed between India and Indonesia to revise the quality standards as India does not produce ICUMSA 1,200 raw sugar. But now, the International Commission for Uniform Methods of Sugar Analysis a standards body that publishes norms for analysis of the sweetener modified the colour standard for raw sugar to 500-600 from 1,200. It also reduced import duties for Indian raw sugar to around 5 percent to further bolster the initiative. Indonesia annually imports 3.5-4.0 million tn of sugar. But the expected exports this year not more than 2.5 LT to Indonesia because raw sugar availability in India is not much as the refining has already been started by the mills in India. So far, Indonesia likely to import 1.3 LT sugar from India by May'20.

Maharashtra has produced only 47.73 lakh tonnes of sugar with an average recovery of 10.98% till the 23rd February. Total of 17 sugar mills were closed out of 144 mills, around 10 mills closed in Aurangabad district followed by 3 mills in Ahmednagar, 2 mills each in Pune and Solapur. In Kolhapur division the recovery rate improved to be around 12.02% at this period of time. Recoveries have slightly increased to 11.04% from 10.8% in Pune division, 9.98% from 9.49% in Solapur, 10.14% from 9.84% in Ahmednagar, and 9.77% from 9.44% in Aurangabad compared to the recovery rate compared to the last week of January. The drought and

floods impact earlier in the previous year can be seen on the sugar production but many sugar mills are likely to close in the end of March in Maharashtra. While the average recovery in Nanded showed significantly higher sugar recovery rate at 10.57% from 10.33% (in the end of Jan'20) compared to Solapur, Ahmednagar and Aurangabad. As estimated earlier, the sugar recovery slightly improved due to cold weather and Adsali crop in Kolhapur division.

The Uttar Pradesh expects a total sugar production in Up might reach upto 123 lakh tonnes this crushing season with an average recovery rate of above 11.06% higher than what Maharashtra state government expects. As on 25th February 2020, 119 sugar mills were in operation and they have produced 73.75 lakh tonnes of sugar compared with 71.02 lakh tonnes produced by 117 mills on the corresponding date of last year. The harvesting of wonder variety 238 which has higher yield in terms of crop harvest as well as results in higher percentage of sugar content resulted in the better yield and thereby higher sugar production.

According to the trade sources, India exported 3.58 LT of sugar in January month. The Indian mills have started exporting the sugar produced in the new season (2019-20) due to which the prices reported are slightly higher compared to the previous month December. Out of the total exports, largest quantity of refined sugar has been exported to Malaysia exporting 1,39,033 tonnes at an average FOB of \$330/MT followed by Iran of 59,565 tonnes at an average FOB \$343/MT and Afghanistan exporting 53,973MT worth \$342/MT. Sugar has been exported to Middle Eastern countries including Somalia (11,751 tonnes at an average FOB \$355/MT), Saudi Arabia (9,135MT tonnes at an average FOB \$354/MT). The export to Sri Lanka was at an average \$337/MT (19,822 tonnes) and to Pakistan at an average of \$347/MT (10,589 tonnes).

The sugar exports at this point of time this sugar season has picked up the pace due to the export subsidy incentives given to the sugar mills across India. This prompted the government (DFPD) to issue new guidelines directing the reallocation export quotas from mills that haven't been able to use them to those that have asked for higher quotas. Also, Indonesia has finally decided to allow sugar imports from India, discussions for which had been going on for about two years. Therefore, today the government released a notification revising MAEQ of sugar for export during 2019-20 sugar season. In order to improve the liquidity position of the sugar mills so that they can move a step forward to clear off the cane price dues of farmers. Therefore, **export quotas of 611,797 tonnes have been redistributed after reviewing exports performance of the mills.** This would help the mills to export at faster pace those who have higher stocks. About 1.6-1.7 MMT have been exported and about 3.2-3.3 MMT of export contracts have been signed.

According to the 2nd advance estimate released by the government recently, the total sugarcane production in India might reach upto 3528.45 lakh tonnes against the target of 3855 lakh tonnes. The 2nd advance estimate is lower by around 6% compared to the first advance estimate due to the lower production this year. Due to which the sugar production declined by around 22% at 169 lakh tonnes so far till 15th Feb'20.

According to ISMA, all sugar mills across India have produced around 169 lakh tonnes of sugar lower as compared to 219.66 lakh tonnes produced on the corresponding time last year lower by 22.6%. This year around 23 sugar mills have stopped crushing operation due to lack of availability of cane out of 449 sugar mills. While, out of 521 sugar mills, only 19 mills have stopped the operations during the same time last year. Maharashtra this year have produced sugar less by around 47% to 43.38 lakh tonnes with a closure of 8 sugar mills compared to 82.98 lakh tonnes last year till 15th Feb. In U.P. 119 sugar mills which are in operation have produced 66.34 lac tons of sugar till 15th February'20, compared with 63.93 lac tons produced by 117 mills on the corresponding date of last year
