

Domestic Fundamentals:

- Mostly sideways to firm sentiment featured in various edible oils at various centers on Friday.
- CNF CPO at Indian port is quoted at \$682.5 per ton for October delivery. Moreover, RBD palmolein (Malaysian origin)
 CNF at Indian port is offered at \$687.5 per ton for October delivery. High sea duty paid CPO Kandla is quoted at Rs
 568 per 10 Kg and for October delivery is quoted at Rs 558 per 10 kg. CDSO CIF at Indian port is offered at \$812 per
 ton for October delivery. Canola CIF is quoted at USD 800 per ton for November delivery.
- Fall in prices of competitive and weak exports from Malaysia will underpin palm oil prices in near term. End stocks of palm oil are expected to increase in September in Malaysia due to lower exports and higher production.
 - Ringgit depreciation is expected to support palm oil prices in near term. Production will rise in September but at a lower rate due to lagged effect of El Nino which hit earlier this year. Production in October is expected to rise steadily on seasonal uptrend of production.
 - Demand is expected to improve from India on cut in import duty of palm oil and firm demand in domestic market. Demand of palm oil in medium term will depend upon the arrival of winter in India, China and EU. Prices are in range
- Argentina decreased its soybean crop estimate of 2016/17 to 53 MMT from 56 MMT in its previous estimate. Lower
 production of Argentina is due to lower area under production on cancellation of expected reduction in export duty of
 soybean and soybean products which will lead to higher planting of corn and wheat.
 - US soybean crop is in very good condition and harvesting pace has improved and yields are very impressive indicating that USDA will increase soybean crop in US in its October estimate. Weather is forecast to be clear in most parts of Midwest supporting harvesting.
 - Soybean stocks in US at the end of September rose to record in five years due to lower crush of soybean on record crops expected in US. There is little demand of soy oil and soy meal in crushers is running only to cover demand as market participants expect price correction. Lower crush of soybean will decrease production of soy oil and decrease stocks of US and underpin prices.

Brazil soybean crop is expected to be 101-104 MMT, according to CONAB due to lower increase in area allocation due to dryness in Mato Grasso and record prices of corn in its market.

Rise in crude oil prices will support soy oil prices in near term.

Prices are in range.

• US oilseeds processors have crushed 4.219 million tons (140.6 million bushel) of soybean during August 2016 which is down from 4.337 million tons during the corresponding period last year and down from 4.604 million tons processed in July 2016. The crushing is slightly lower than the analyst's average of 4.231 million tons, reported by USDA.

Outlook: Edible oil basket is expected to feature weak soy, palm and rapeseed oil in the spot market, in near-term.
