

Domestic Fundamentals:

- Mixed sentiment featured in the various edible oils at various market centers on Saturday.
- Palm oil has corrected on back of weaker competitive oils, weak RBD DALIAN and appreciating ringgit. However, palm oil is expected to be firm in near term on higher exports and lower than expected end stocks growth of palm oil in Malaysia. Exports will improve in January on higher demand from top import destinations. Production of palm oil will be weaker in Malaysia in December due to lagged effect of El Nino and seasonal downtrend of production. Weather is expected to be warm in palm oil growing regions of South East Asia. However, wet weather is ruled out and if weather turns wet it will support palm production. In the oceans around Southeast Asia has cooled indicating weak La Nina. Aggressive pricing of RBD palmolein Malaysia compared to CPO Indonesia will support exports of palm oil from Malaysia and support prices. Exports firmed in last 10 days of December and ended with 1-6 percent lower. Demand from India improved in last 5 days of December. China is purchasing more on stocking ahead of Chinese New Year and replenish stocks of palm oil on lower buying year to date in 2016. Rise in crude oil prices will support prices. Palm oil prices are in a range.
- Area under soybean is expected to decrease in Argentina in 2016/17 due to initial dry conditions and wet conditions thereafter. There is still window left for planting but it will be below expect area. Rains will return again in weekend and damage will only be ascertained when rain stops. Higher soy oil production in Argentina in first 11 months of 2016 indicate higher crushing of soybean in Argentina which led to higher production of soy based biodiesel. Higher production of soy oil was due to President Mauricio Macri cutting of export duties of soy products. Crush in US is progressing in weaker rate compared to corresponding period due to weak soy meal demand which will reduce soy oil stocks in December and January. Strong exports of soybean from US to China will support prices. Rise in crude oil will provide support to soy oil prices in near term. Prices are in a range.
- Buenos Aires Grain Exchange has lowered its Argentina's 2016/17 soybean planting estimate to 19.3 million hectares from 19.6 million its previous forecast. Fall in the area is attributed to the dry weather in Southeast Buenos Aires province. Argentina's 2015/16 area under soybean was reported at 20.1 million hectares.
- According to cargo surveyor Societe Generale de Surveillance (SGS), Malaysia's December palm oil exports fell 1.8 percent to 1,109,606 tons compared to 1,130,172 tons in the corresponding period last month. Top buyers were European Union at 257,808 tons (215,995 tons), China at 176,477 tons (215,655 tons), India at 154,525 tons (118,010 tons), Pakistan at 46,150 tons (22,000 tons) and United States at 43,620 tons (55,556 tons). Values in brackets are figures of corresponding period last month.

Outlook: Edible oil basket is expected to feature firm bias in the spot market, in near-term.
