

### Domestic Fundamentals:

- Mixed sentiment featured in various edible oils at various trading centers on Saturday.
- Imports of edible oil rose in April compared to April 2016 on higher imports of CPO, soy oil and sunflower oil. CPO and RBD palmolein demand increased in domestic market in April compared to March as imports grew and stocks at ports reduced for both commodities. Demand of soy oil is not as strong as increase in imports in April was set off by rise in stocks at ports. Same is true with sunflower oil which showed higher imports in April compared to March but was totally set off by increase in stocks at ports. Incremental imports in April were stored in ports especially soy oil and sunflower oil. Imports of sunflower and soy oil increased on low premium of sunflower oil over soy oil and low premium of soy oil over palm oil. Demand of Canola oil is weak with lower imports and increased stock at ports.
- Palm oil- Palm oil prices are supported by higher shipments on demand ahead of Ramadan. Exports of palm oil from Malaysia increased 7-9 percent in first 15 days of May. Exports are expected to show even better numbers in near term. Demand from India and other destinations are fuelling demand and support prices. With increased palm oil exports and lower rate of growth of production in May in Malaysia will lead to slow rise in end stocks of palm oil in Malaysia. Malaysia decreased export duty to 6 percent for June from 7 percent for May. Prices of palm oil are rising despite appreciation of ringgit. However, if ringgit appreciates further then it may slow recovery of prices.  
Fall in CBOT soy oil will support losses.
- Soy oil- Soy oil prices fell on depreciation of Brazilian Real due to political uncertainty in the country. The entire soy complex was under pressure due to depreciation of Real. Brazilian took advantage of prices and booked their cargoes of soybean bringing down global prices. Earlier Brazilian farmers were holding their produce to get good prices of their harvest.  
Soy oil end stocks fell in US in April on lower production of soy oil due to lower crush of soybean is bullish for soy oil prices in medium term.  
Soybean planting surged to 32 percent compared to 14 percent last week and equivalent to 5-year average in corresponding period while lower from 34 percent in corresponding period last year. Planting of soybean improved due to dry weather in US Midwest after rain slowed planting in early season. Planting is expected to slow in coming week as rains are expected to return to US Midwest which will slow pace of planting.  
Buenos Aires Grains Exchange increased soybean crop in Argentina to 57.5 MMT from 56.5 MMT from its previous estimate. Higher crop is due to higher yields due to initial wet weather. Harvest has reached 66 percent until last week and will be wrapped by end of May.
- According to Malaysia Palm Oil Board (MPOB), Malaysia reduced June crude palm oil export duty to 6 percent from 7 percent in May. Tax is calculated at reference price of 2844.79 ringgit (\$657.53) per ton. Tax is calculated above 2,250 ringgit starting from 4.5 percent to a maximum of 8.5 percent.

**Outlook:** Edible oil basket is expected to feature firm sentiment in near term.
