

Domestic Fundamentals:

- Mostly firm sentiment featured in various edible oils in major centers on Thursday.
- Palm oil- Rise in RBD palmolein DALIAN and CBOT soy oil supported palm oil prices in near term. DALIAN is rising from very low base and is perfectly correlated with BMD Malaysia and India high seas prices. Further, depreciation of ringgit has pushed prices higher in near term and may influence its prices in near term. Palm oil stocks are expected to rise marginally in June in Malaysia compared to May on lower rise in production and rise in exports. Exports fell marginally in June from Malaysia due to demand ahead of Ramadan with demand rising from India, Pakistan and Middle East with incremental demand in Indonesia and Malaysia. Production in Malaysia in June will show minor rise due to low availability of labor on Ramadan which slowed harvesting. Production in Malaysia and Indonesia will accelerate from July as monsoon came early in Malaysia and Indonesia which will lead to early and prolonged period of harvest which will led to steady rise in stocks in both countries. Palm oil prices are expected to weaken on slow exports from Malaysia and rise in production in Malaysia. However, there will be loss in production in Malaysia in June due to some loss in production due to Ramadan. Exports fell in June as reported by cargo surveyors from Malaysia while production is expected to rise on seasonal uptrend of production, diminishing effect of El Nino. Lower rise in stocks will underpin prices. Prices are in a range.
- Soy oil- USDA reported slower soybean planting progress in US. Good to excellent condition decreased by 2 percent indicating that crop condition is not as good as last year but above 5-year average. Weak progress of soybean crop will support soybean complex prices. Support from wheat and corn in CBOT supported the rise. Weakness in Argentina peso will support exports of soybean complex goods to major markets including India. Lower stocks of soybean at the end of June quarter and lower than expected area of soybean has supported soybean complex prices in near term. Despite record area soybean yields will be at 5-year average which USDA indicated in its June report which will support prices in medium term.
- In the weekly USDA crop progress report released on 02 July; Soybeans emergence are reported at 98% which is at par with the corresponding period last year and also up from 5 year average of 95%. Soybeans blooming are reported at 18% which is down from 20% from the corresponding period last year and up from the 5 year average of 17%. About 64% of the soybean planted crop is under good to excellent condition which is down from 70% during the corresponding period last year.
- Grains Exporters Association ANEC has projected Brazil's soybean exports at 61-62 million tons in 2017. Brazil's has exported a record 45.5 million tons of soybean in the 1st half of the marketing season. ANEC sees Brazil's July'17 soybean exports at 7 million tons.

Outlook: Edible oil basket is expected to feature weak sentiment in near term.
