#### **Domestic Fundamentals:**

- Weak trend featured in different edible oils at various market centers on Monday.
- Palm oil- Expectation of rise in palm oil end stocks of palm oil in Malaysia in October due to rise in production and slowdown of exports is expected to underpin prices in near term. However, rise in production of palm oil will slower than market estimates.

Demand of palm oil from Malaysia has been weak due to weak demand from China and India. Exports in first 10 days of November are expected to be weak on low demand from top importing nations.

Prices are high and buyers will be looking for bargains especially India and China which are prices sensitive nations which may slowdown demand in medium term.

Weakness CBOT soy oil and RBD palmolein DALIAN is expected to underpin palm oil prices in near term.

MPOA reported 10.5 rise in production of palm oil in Malaysia which may give bearish direction to the market.

Some wet weather in the subcontinent will support gains in palm oil prices.

Further, production of palm oil is expected to grow but at lower rate in Malaysia in October.

Malaysian government estimated that palm oil production will rise at a slower rate of 2.5 percent in 2018 after rise of 15.5 percent in 2017. Average prices have been estimated higher on higher demand from China, EU and India. Rise in crude oil prices have supported gains.

- Soy oil- Soybean planting in Brazil has reached 43 percent of area until the last news came in which is marginally below 5-yer average of 44 percent. Rains in soybean growing areas of Mato Grosso and Parana have accelerated planting. However, center west of the country still lags moisture which is lagging planting. Rains are been forecast which will support soybean planting.
  - Soybean harvest picked up in US Midwest on dry weather. Harvest has reached 83 percent just below last year and 5-year average.

Informa lowered US soybean 2017 yield estimate to 49.7 bpa (bushels per acre) compared to the estimates of 50.0 bpa in the month of October. Soybean production has been estimated at 4.447 billion bushels compared to previous month's estimates of 4.474 billion bushels.

Planting of soybean has started in Argentina and has reached 1.8 percent of 18.1 million hectares until this Thursday, according to Buenos Aires Grains Exchange. It said that total area under soybean will shrink 5.7 percent in 2017/18 due to flooding.

Decision EPA to back out on series of reforms to cut the production of soy oil based biodiesel supported soy oil prices in near term.

Rise in crude oil prices will support soy oil prices in near term.

• In the weekly USDA crop progress report released on 30 October; around 83% of the new soybean crop has been harvested which is less than 85% during the corresponding period last year and down from the 5 year average of 84%.

Outlook: Edible oil basket is expected to feature range -bound to firm sentiment in near term.
