

Domestic Fundamentals:

Edible oil basket showed rising sentiments at various market places. Palm oil, Soy oil, sunflower oil and groundnut oil traded up, while, mustard oil prices closed on downwards side.

Soybean oil

- Soy oil prices are firm backed by slow soybean seed arrivals. Prices may see some correction but prices will be underpinned by rallying international market.
- Higher domestic soybean stock due to slow seed arrival and higher retention by farmers will pressure the prices in coming months.
- Brazil's soybean crop harvesting has commenced and peak arrivals are expected by February end.
- CBOT Soy oil is trading up taking support from rising crude oil prices and downward revision in crop production in Brazil and Argentina.

Palm oil

- Palm oil domestic prices are moving with firm tone following rising international palm oil prices. Some correction in prices is expected but overall firm sentiment will prevail.
- Indonesia has come up with new government policy for the palm oil exporters to declare their domestic sales and to gain approval for their shipments in advance to monitor the price rise and domestic supply for edible oil. This led to rally in BMD Malaysia.
- The concern of labour problems in Malaysia is expected to persist in coming months which will affect output as agreement between Indonesia and Malaysia to send Indonesian workers are yet to be finalized.

Mustard oil

- Prices are correcting as weather is improving backed by favorable weather condition for drying of crops in field.
- Mustard oil prices are expected to trade in range of 1600-1680 for the first fortnight of February. Arrivals may pace up after 2nd week of February but if rains continue in coming weeks, arrivals may delay till first week of March.
- COOIT expects mustard crop for Rabi 2022 at 100-110 lakh tonnes (LT) compared to 85 LT last year. Agriwatch has estimated the RM seed production to be at 105.2 lakh tonnes for year 2021-22, However, weather concern in few pockets of Rajasthan, Haryana and Uttar Pradesh may drag yield on lower side.
- Mustard crop may get impacted by lower temperature in key growing area as frost are harmful to the crop at flowering stage. Coming days are crucial for mustard crop.
- Mr. PK Rai, Director Mustard Research expects mustard crop production to reach 135 MMT on an average yield of 1500Kg per Ha, if weather condition remains favorable for crop growth.

Outlook: Edible oil basket is expected to feature firm trend for the week.
