Soy oil Fundamental Analysis and Outlook:-

Domestic Front

- Soy oil featured sideways trend in domestic markets for the week in review on sideways trend in prices of soy oil in international markets. Further rise in prices has lowered the Soy oil domestic demand, thus market is stable.

Soy oil demand is slow at high seas as its prices are traded sideways at high seas same as CNF markets.

Weather varies in South America has supported prices of Soy complex in International market. Brazil is dealing with excessive rains whereas Argentina is dealing with drought that might affect yield if it not rains.

Amid low global edible oil stock and price inflation in food, the Argentinian Soy crop may relieve such pressures. But the la Nina effect is affecting Soy crop in Argentina and may lower the yield from forecasted range.

CDSO premium over CPO at high seas is high and may cap gains while refined soy oil discount over rapeseed oil is high so may increase demand. In USD terms, premium of CDSO CNF over CPO CNF is high and decrease demand of CDSO at CNF markets. Further, refined soy oil discount over refined sunflower and soy oil CNF discount over sunflower oil CNF is high may support soy oil prices. Moreover, refined soy oil premium over RBD palmolein is high may cap soy oil prices in domestic markets.
