

Wheat Domestic Fundamentals:

- **According to IBIS (provisional data), export of wheat in the month of November** was 0.22 Lakh tones which is around 66% less than last year at the same month, which was 0.65 Lakh tones in 2013. The reason behind the lower export is attributed to disparity from other exporting countries like U.S.A., Russia and Ukraine and high domestic prices.
- **Sowing of wheat in Rajkot region of Gujarat is almost 15% completed**, wheat area in this region may decrease as compare to last year due to lack of water availability and less rain. Wheat area may go to dhaniya or zeera as farmers are getting good prices for these commodities and they need less water as well.
- **As of now Wheat area has slightly increased by 2% in comparison to last year** till date. As per latest update by agriculture ministry wheat coverage during 2014-15 has been registered at 161.57 lakh hectares against corresponding period of 2013-14 (159.11 lakh hectares).
- **The Inflation of wheat has decreased to -1.92% in the month of October** as compare to -1.50% in the month of September. WPI has decreased to 209.5 in October as compare to 209.7 in the month of September. Record production and no export demand are the main reason for the decrease in WPI.
- **According to IBIS, export of wheat in the third week of November (17-23 Nov)** was around 16 Thousand Mt. The major export destination of Indian wheat was U.A.E from Kandla port which accounted 15 thousand MT at an average FOB price of \$261.28/Tn. Other countries were Philippines and Malaysia

International Market Update:

- **Egypt had purchased 175000 tonnes of wheat from Romania & Ukraine** at an average price of \$271.24/tonne CiF which has to be delivered between 1-10 January. Till now from July 1st, Egypt has bought 2.425 million tonnes of wheat from the international market, in 2013-14 Egypt had purchased 5.46 million tonnes of wheat from abroad in addition to 3.7 million tonnes of local wheat.
- **Russia government might introduce few new regulations to curb exports** to make sure it has enough wheat for domestic use. Russia is a key wheat exporter to North Africa and the Middle East. Russia exports increased due to bumper production and fall in the value of the rouble currency.
- **Australia in its latest report reduced its wheat production forecast by 4%** from 24.23 million tonnes to 23.22 million tonnes. The main reason behind reduced production is unfavorable weather condition as all of the Australian east coast and South Australia received less than half the average amounts of rainfall over the last three months. The reduced production estimate of Australia, Russia restrictions on grain exports and concerns over U.S. wheat production may further increase global wheat prices.
- **The International Grains Council slightly lowered its forecast** for global wheat production in 2014/15 to 717 million tonnes, up from a previous forecast of 718 million. Unfavorable weather condition across the United State and the Black Sea region is the main reason for decrease in production estimate.
- **Australia wheat export in the 2014/15 season got off to a slow start** as dry weather made farmers unwilling to release supplies and exporters also had to contend with cheaper supplies from the United States. But with concerns over potential disruption to production due to unfavorable weather across the United States and the Black Sea region, Australian supplies are now competitive against other origins.

Domestic market Outlook:

Wheat cash market is likely to trade in consolidation.
