

Wheat Domestic Fundamentals:

More or less wheat cash markets traded steady on Tuesday and are expected to move up from current level as there is a tight supply side for FAQ varieties despite regular release from central pool through auction. Private trades are not releasing fine variety wheat in anticipation of higher price. Demand for wheat products have increased due to festive season and it may lend support to wheat cash market once again.

All India average monthly price for wheat increased marginally by 0.57 percent from Rs 1772.53 (in June) to Rs 1782.69 per qtl in July-2016 due to restricted arrivals in markets, active buying by private trades and increasing dependence on central pool stock. Average price (July) is higher by 8.07 percent from the price (Rs 1649.47 per qtl.) registered in July-2015. Festive demand would continue to lend support to cash market. However, continuous release from central pool stock through auction and import would ease tight supply side and may be restrictive to one way uptrend

Wheat import continues and a fourth consignment of 16414.11 thousand T landed on Tuticorin during week ended 31st, July-2016. Wheat has been sourced from Ukraine at an average CiF of 192.08. This year in July total import registered over 50,000 tonne in last three weeks from one country-Ukraine. Import is likely to continue as wheat price in Black sea region has decreased to \$158 per tonne.

India exported 157.11 tonne wheat during week ended 31st, July, 2016. It decreases considerably from 450 T.. Wheat has been exported at an average price of 460.03 per tonne. Major chunk has been exported from Mundra port. major buyers were UAE, Malaysia and Sri Lanka. As there is no parity for exporters, export volume would remain at negligible level in coming weeks too.

Regular release from central pool stock through auction would ensure supply for millers and in open market. Wheat price in Black Sea Region has decreased to \$160 per tonne. If millers add freight and insurance cost (around \$25 per tonne) it brings total landed cost at \$190 per tonne at Tuticorin port. With 25 percent duty total costing for millers come to Rs 15200 per tonne at their premises in Kerala. When they source it from domestic markets, total cost comes to Rs 19000 per tonne. So, import is likely to continue.

Unchanged import duty structure would force south Indian millers to source wheat from central and north India to some extent. However, weak global market due to ample availability in Black Sea Region, US, Australia, France, Canada and Argentina has encouraged south Indian millers to continue import despite 25% import duty.

Rake loading from Rajasthan to Bangalore is being reported at 2075 per qtl. As demand continues, prices in domestic market is likely to trade stable to slightly firm despite import and release from central pool stock through various channels.

International Market Update:

France agriculture ministry has slashed its output by 21% as heavy rains worsened the crops sending yields to lowest level since 1986. All this has given an advantage to sellers in Russia, where prices have increased by \$2.5 per tonne from a week earlier to \$167 per tonne. Wheat for delivery in French port of Rouen with minimum 11% protein content increased by 0.6% to \$185.95 per tonne last week.

IGC has revised wheat production projection up by 6 MMT from 729 to 735 MMT in 28th, July-2016 for crop year 2016-17. According to IGC global wheat production for 2016-17 may touch 735 MMT against 729 forecast for 2015-16. The difference is around 6 MMT from previous estimate. Higher projection for wheat may pressurize global wheat market at current level and any major recovery from current level is unlikely.

Ukraine is offering wheat at \$158 per tonne for wheat having 12.5 percent protein content. However, French wheat export price increased by 4.5 % to \$ 187.5 per tonne. Crop condition has worsened in France and production may decrease by 17 percent to 34 MMT this year. Fear of lower crop size has lent support to French wheat export price. Besides, production in Ukraine and EU is likely to decrease by 8.34 and 2.19 percent to 25 and 156.5 MMT respectively.
