

Wheat Domestic Fundamentals:

All India weekly average prices increased by 0.96 percent to Rs. 2016.64 per quintal during the week ended 15th January 2017. Wheat average price were ruling at Rs 1997.45 per quintal during 01-08th January 2017. As compared to prices in the week 09-15th January 2016, the prices are firm by 14.42 percent. Prices are expected to remain range bound to slightly firm in coming days.

As per latest update, area sown until 13 January'17 is 309.6 lakh hectares compared to 289.07 lakh hectares in the previous Rabi season. The area is higher by around 7 percent compared to last year for the same date. Among major states the area is down in Bihar, Chhattisgarh, Himachal Pradesh and Jammu & Kashmir, whereas Madhya Pradesh, Maharashtra, Punjab and Uttar Pradesh have seen an increase in area compared to last year for the same date. The normal area is 304.05 lakh hectares.

As per latest update, India is expected to receive around 1MMT of wheat in January'17. This will include delayed shipments from last year as well as shipments that were booked for this month only. This may lead to congestion at Indian ports. Around 700,000 tonnes is expected from Ukraine and the remaining from Australia for the month. Furthermore Indian crop has entered crucial stages and any further deals will depend on how the crop shapes up. As of now, not many new deals are being signed.

As per latest update, FCI has sold around 83000 tonnes of wheat in the first week of January. For the year 2016-17, FCI has sold around 37.3 lakh tonnes of wheat until last week of December. Of this total quantity around 32 lakh tonnes has been purchased by millers and the remaining quantity by state governments. Government has increased its release in OMSS but it is still lower compared to last year.

Wheat WPI has increased slightly from 232.9 in October to 245 in November-2016. Monthly wheat inflation has increased by 5.19 percent in November-16 compared to October -16. As compared to November-15 wheat WPI has increased by around 10.71 percent.

Pressure on cash wheat market may continue as recent rains in major growing belts and decreasing temperature are considered to be favorable for standing crop and its better growth. Crop is in developmental stage and farmers are happy with short spell of rains. One –two spell of rains in Jan end and Feb would help in attaining better yield. Import flows continue and domestic demand remains restricted. All these developments would not allow wheat market to get firmer.

To ease supply side and check price in the open market, FCI has revised its grain stocks norms for third quarter beginning in the month of October and January while rules for July and April have remained unchanged. Under the revised norms FCI needs to maintain wheat stocks of 19.5 million tonne (MT) and 12.8 MT on October 1 and January 1, respectively. Now it needs to maintain 1MMT less wheat. As on December 1, FCI had a wheat stock of 16.49 MT, against the buffer stocks norm of 13.8 MT required to be maintained on January 1. This implies that the corporation would be left with virtually no excess wheat stocks starting next year as it requires around 2.5 MT of grain monthly for Public Distribution System.

At import front situation seems to be turning in favor of south Indian millers after revision of import duty to Zero. Wheat from Ukraine is arrived at Chennai and Tuticorin port at \$195.23 per tonne and \$199.93 per tonne respectively. In October India imported 5.41 lakh tonne wheat at an average CiF of \$221.97 per tonne. Import is likely to continue as prices in domestic market rules higher. As import duty is slashed, import volume may exceed 2MMT in current MY. It would impact south Indian millers demand from central and north India. Off-take from central pool would decrease.

International Market Update:

According to latest update by International Grains Council, the production forecast has been increased by 3 million tons for crop year 2016-17. The production may touch 752 million tons against a forecast of 736 million tons for 2015-16. The difference is around 16 million tons. Higher projection for wheat may pressurize global wheat at current level and any major recovery from current level is unlikely.

As per latest update, a consortium of South Korean mills has bought around 100000 tonnes of U.S. and 87500 tonnes of Australian wheat. The wheat from U.S. was bought in three consignments of 35000 tonnes, 35000 tonnes and 30500 tonnes whereas the wheat from Australia was bought in two consignments of 54500 tonnes and 33000 tonnes.

As per latest update, Australia is likely to produce around 33 MMT of wheat in 2016-17 surpassing its own record of 29.9 MMT set five years ago. Given the increase in production, Australia is expected to have around 53% more exportable volume compared to last year. Prices for the new crop are lower compared to last year, as Australian premium wheat with minimum 10.5% protein content was quoted around \$199/mt FoB Kwinana compared to \$212-213/mt last year and Australian standard white wheat with minimum 9% protein content was quoted around \$186/mt FoB Kwinana which is around \$5-10/mt less compared to black sea wheat with 11.5% protein content.

Outlook: Cash market is expected to trade steady to slightly weak in the near term.
