

Wheat Domestic Fundamentals:

Higher area coverage and favourable weather condition throughout growing regions are likely to ensure good crop size of wheat this season. However cold wave in some pockets of Punjab and Haryana has affected growth of plants. It is considered to be usual features in every season. With opening of weather in many parts of wheat growing belt; situation is likely to improve in coming weeks. If rains occur in central north and west India in next one week, it would ensure better grow for standing crop. As of now overall situation is normal and bumper crop seems on the card once again.

As per latest update, area sown until 27th December-19 is 297.02 lakh hectares compared to 270.75 lakh hectare in the previous Rabi season. The normal area is 305.58 lakh hectares. Acreage under wheat has increased in the states of Madhya Pradesh, Gujarat, Maharashtra and Rajasthan till date.

As per market sources, wheat stock in central pool as on 1st December'19 stood at 351.75 lakh tonnes down by 5.89% compared to last month. This quantity is higher by around 14.84% compared to last year for the same month. Government has already applied import duty on wheat to curb imports and provide support to domestic prices. Therefore, government has abundant supplies this year to tackle any unexpected rise in wheat prices by selling more quantity in open market.

All India weekly average prices increased by 0.76 percent to Rs. 2236.04 per quintal during the week ended 28th December 2019. Wheat average price were ruling at Rs 2219.24 per quintal during 16-23 December 2019. As compared to prices in the week 24-31 December 2018, the prices are higher by 8.30 percent. Prices are expected to remain steady to firm in coming days amid good demand in the domestic market.

The Food Ministry of India has decided to hike the wheat base price to Rs. 2245/100 kg during January –March quarter from the current base price of Rs.2190/100 kg. The government started offering wheat at a base price of 2080 rupees per 100 kg in Apr-Jun and subsequently, raised it by 55 rupees every quarter. This year's base price under the auction includes a 50% interest rate and warehouse charges. In non-wheat producing states, the rail freight from Ludhiana is added to the base price.

According to FCI, wheat stocks in the central pool as on 1st December 2019, is reported at 351 lakh metric tonnes, which is at seven-year high. Stocks have increased amid 'open-ended' procurement in recent years, as a result of which the Centre has been procuring a third of the wheat output, against about 25 per cent some years back. This year farmers in Madhya Pradesh, Gujarat and Maharashtra are shifting from chana towards wheat following higher soil moisture and water availability leading to higher acreage till date. Storage will become an issue for the government following higher stocks currently and another year of expected bumper production. Weather in the coming days will determine the actual output of wheat.

Wheat WPI has increased from 160.6 in October -2019 to 164.4 in November-2019. Monthly wheat inflation has increased by 2.37 percent in November-2019 compared to previous month.

India has raised MSP by Rs 85 per quintal to Rs 1925 per quintal for MY 2020-21. The hike in MSP is lowest in last three years. Even though this increase is lower it has still widened the gap between domestic and international prices. India wheat FoB at Kandla is ruling around \$312 per tonne compared to \$203.5 per tonne for Russian wheat with 11.5 percent protein content.

As per trade source, India has exported around 21.40 thousand tonnes in the month of November-2019. The quantity in November-2019 was exported at an average FOB of \$ 298.15 per tonne and the major destinations were Bangladesh, Nepal, Jordan, UAE and Sri Lanka. Exports are likely to be at lower side as other countries are able to provide quality wheat at competitive prices.

International Market Update:

Ukraine has sown more wheat than expected this year. However dry weather has damaged some fields due for harvesting next year. As of Dec. 1, farmers planted 6.4 million hectares of wheat for the next season crop, about 8% more than the area estimated by the government's agriculture portal. Compared with last year, the acreage is about the same. This is above market expectation. Winter wheat seeds need moisture to grow into young plants that are robust enough to endure the cold season. The winter crop makes up more than 90% of Ukraine's total wheat harvest.

According to the National Statistics Office, Germany's winter wheat sown area for the 2020 harvest has been reduced by 7.1pc on the year to about 2.83 million hectares. Farmers had turned to other crops such as rapeseed.

The Taiwan Flour Millers' Association purchased 104,600 tonnes of milling wheat to be sourced from the United States in a tender which closed on Thursday according to European Trade sources. The wheat was bought in two consignments comprising various wheat types for shipment from the US Pacific Northwest coast in February and March 2020.

According to trade sources, Iran has bought up to 1 million metric tonnes of wheat from international markets in recent weeks. Imports are expected from Russia and European Union countries including Germany. Iran is planning to import 3 million tonnes of wheat this Iranian calendar year ending in spring 2020, according to an official from the country's Federation of Food Industry Associations.
