

Wheat Domestic Fundamentals:

Sangrur contributes more than 10% to the total wheat production of Punjab and adequate arrangements have been made to ensure hassle-free procurement in the district amid the Covid-19 lockdown. It has secured top rank on the Punjab mandi lifting around 54% of the wheat grains that arrived in the market. Sangrur has lifted 1,31,640 metric tonne (MT) wheat from the grain markets of the district. Around 2,43,778 MT grains has already been procured in the district by various agencies till April 21 and to ensure adequate space for new arrival, the lifting process has been expedited.

Farmers in Haryana are storing the harvested crop at home this season as the state authorities have restricted the entry of vehicles to avoid crowding at grain markets. Storing the crop at home and then taking it to the market will involve more labour cost. The farmers are worried to delay harvesting as weather might damage the standing crop.

In Gujarat, procurement of wheat will start on 27 April and is expected to be over by 30 May, 2020. Gujarat is expected to harvest a bumper crop of 40 lakh metric tonnes this season. According to the Union Ministry of Agriculture and Farmers welfare, the total area under wheat crop this season is 310 lakh hectares of which 63-67 per cent has already been harvested. Around 90-95% harvesting of wheat is completed in Madhya Pradesh, 80-85% in Rajasthan, 60-65% in Uttar Pradesh, 30-35% in Haryana and 10-15% in Punjab. Harvesting is likely to be completed in these states by end April.

In Punjab, moderate to heavy rainfall has brought wheat harvesting as well as procurement to a standstill on Monday. The crop is also likely to be damaged amid increase in moisture content. However exact crop loss will be clear in the coming days.

India will be exporting around one lakh tonnes of wheat to Afghanistan and Lebanon under government to government (G2G) arrangement. The country is expecting a record wheat production of 106.21 MMT this year. Despite surplus production, Indian wheat is out of global market due to higher price. But government has been exporting wheat to African and Asian countries on humanitarian ground under G2G arrangement. Nafed has been asked to export 50,000 tonnes to Afghanistan and 40,000 tonnes to Lebanon through diplomatic route according to official sources at the agriculture department.

As per market sources, wheat stock in central pool as on 1st March'20 stood at 275.21 lakh tonnes down by 9.37% compared to last month. This quantity is higher by around 36.86% compared to last year for the same month. Government has already applied import duty on wheat to curb imports and provide support to domestic prices. Therefore, government has abundant supplies this year to tackle any unexpected rise in wheat prices by selling more quantity in open market.

As per Govt. sources the second crop forecast of India is projected to produce a record 106.2 MMT of wheat crop in 2019-20 because of favourable weather conditions and improve crop yields. Wheat output is expected to go up by 2.5% in the crop year, which is expected to reach 291.9 MMT in 2019-20 from 285.2 MMT last year.

All India weekly average prices increased by 1.27 percent to Rs. 2012.39 per quintal during the week ended 23rd April 2020. Wheat average price were ruling at Rs 1987.15 per quintal during 09-15 April 2020. As compared to prices in the week 16-23 April 2019, the prices are higher by 0.71 percent. Prices are expected to trade steady to firm as official procurement has started in Punjab and will start in other states by next week.

International Market Update:

Turkey is emerging as a key player in the international wheat market, importing record wheat levels in recent years. Domestic wheat consumption in Turkey is forecast to increase 1 percent to 19.9 MMT in 2019 and 2020. Most goes into human-consumption products such as flour and pasta, with the balance used as stock feed. The COVID-19 pandemic has raised questions about self-sufficiency in wheat production in Turkey, which produces around 20 MMT of the crop a year. Despite this, Turkey is expected to import around 10.5 MMT predominantly from Russia by the end of the current marketing year, marking an annual increase of 61 percent. Ukraine, Canada, Mexico and Spain have been other major milling wheat suppliers for Turkey this season.

According to USDA only 40% of Colorado's winter wheat is in good to excellent condition compared to 62% last year. Areas under abnormal dryness spread in eastern Oregon and Washington where moderate drought expanded in the central corridor of the state. Looking ahead, dry weather is expected in the Northern Plains while moderate precipitation is expected across parts of the central and southern Great Plains.

USDA now expects the United States will export 10.3 MMT of HRW, 7.48 MMT of HRS, 2.59 MMT of SRW, 5.31 MMT of white wheat, and 1.09 MMT of durum. U.S. HRW, HRS and durum exports are forecast to outpace 2018/19 sales.

In the monthly supply and demand forecasts released by France Agriculture Ministry, projection of French soft wheat exports outside the European Union in the 2019/20 season to June 30 has been increased to 13.2 MMT from 12.7 MMT estimated last month. The latest forecast is 36.5% above last season's level and if realised would surpass the record of 12.9 MMT in 2010-11.
