

Domestic Market Updates:

Wheat cash market is likely to trade steady to slightly firm on seasonal factors like higher demand for wheat products, lower arrivals in markets and short supply of FAQ and premium varieties. As of now south Indian millers are buying wheat from local market, mainly from Rajasthan and Madhya Pradesh. As prices have firmed up in recent weeks, they are trying to explore possibility of sourcing some wheat from the eastern parts of Uttar Pradesh.

Rakes loading for South Indian markets is being reported from Kota region of Rajasthan at Rs 1770/1775 per qtl. South Indian millers (Karnataka) have struck more deals at Rs 1800/1805 per tonne for Sept. delivery. Wheat import from Australia continues. However, no fresh deals have been reported after the imposition of 10 percent import duty.

Wheat stock in central pool was registered at 367.78 lakh tonne on 01st August, 2015. The off-take from central pool stock was lower in the month of July. However, firming of cash market and short supply of premium and milling grade wheat may encourage millers towards govt.'s stock.

Total wheat procurement was registered at 280.88 lakh tonne as on 14.07.2015 as against 271.66 lakh tonne during corresponding period last year. Punjab has contributed 103.44 lakh tonne so far, followed by Haryana 67.78 lakh tonne. M.P. contribution stands at around 73.09 lakh tonne. Rajasthan has procured only 13.0 lakh tonne. Overall procurement is up by 3.39 percent this year.

Agriculture statistics Division, DES has released Fourth Adv. Estimates of Production of foodgrains for 2014-15 on 17.08. 2015. It has revised wheat production estimate down by 1.78 MMT to 88.94 MMT. In Third Adv Est. production was estimated at 90.78 MMT. More decrease in fourth Adv .Est is mainly attributed to weather affected crop in March and April. India has produced 95.85 million tonne wheat in 2013-14.

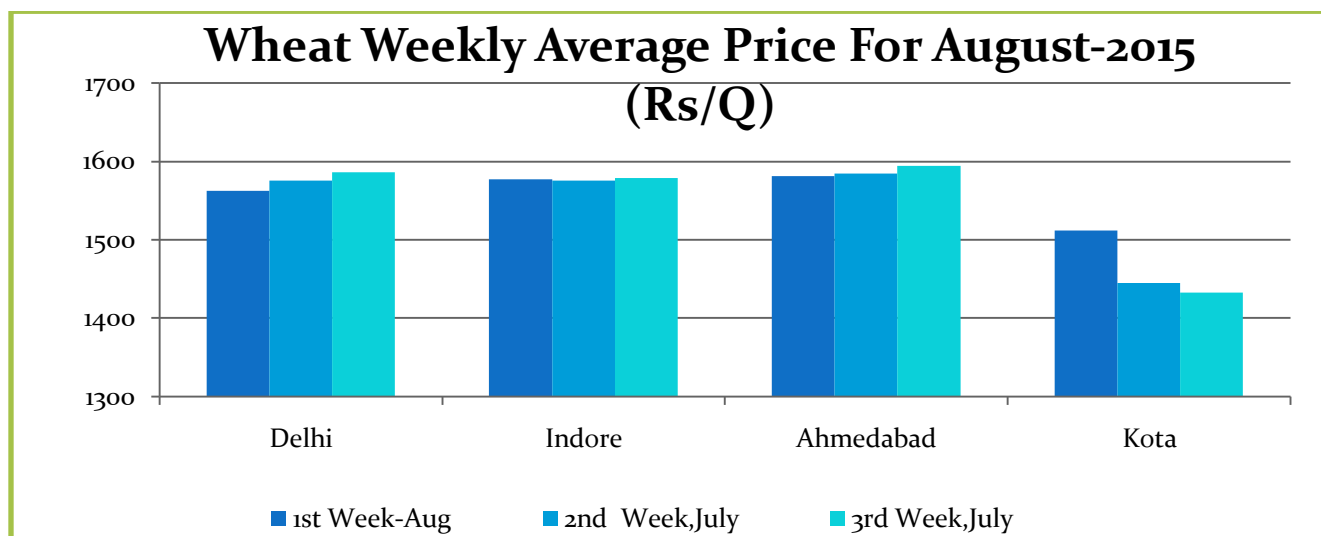

Wheat import in first two weeks of August is registered at 48000 Tonne at an ave CIF of \$278.1 per tonne. During the same period export was registered at 4656 tonne at an ave FoB of \$271.21 per Tonne. Till date in current marketing year export and import were registered at 146006.29 tonne and 358.446.91 tonne respectively as per IBIS data.

High-quality Australian wheat at south Indian ports is currently quoted at Rs 18,000-18200 per tonne while French and Russian wheat at Rs 12,500 a tonne, while the FCI wheat is costlier at Rs 19,000-20000 per tonne. The basic customs duty of 10 per cent on wheat till March 31, 2016 under Section 159 of the Customs Act 1962 will remain effective till March 31, 2016.

Weather Out Look For(Third Week of August,2015)

In the monsoon season, cumulative Rainfall for the country as a whole during the period 1st June to 18th August, 2015 was 9% lower than Long Period Average (LPA). Rainfall (% departure from LPA) in the four broad geographical divisions of the country during the above period was higher by 2% in North West India and lower by 12% in East & NorthEast India, 9% in Central India and 20% in South peninsula.

Warning: Heavy to very heavy rainfall would occur at a few places over SubHimalayan West Bengal & Sikkim; at isolated places over Bihar and Assam & Meghalaya. Heavy rainfall would occur at isolated places over Himachal Pradesh, Uttarakhand, East Uttar Pradesh, Arunachal Pradesh and Nagaland, Manipur, Mizoram & Tripura.

Wheat prices traded slightly up in major benchmark markets in the third week of August except Kota. Festive demand for wheat products and millers' continued buying at local market remain supportive to the cash market fundamentals. Lack of premium and milling grade wheat in open market and restricted selling by stockists may again push market up in the weeks ahead. However, luster loss wheat may trade steady to slightly weak as supply from central pool would restrict any upward momentum. Export demand too would remain suppressed due to disparity for exporters at current price.

Wheat Stock: As on 1st August, 2015:

Wheat	NCDEX	Sep	Buy above	1510	1521	1530	1507

* Do not carry-forward the position next week.

Domestic Weekly Outlook:

Wheat market is expected to trade steady to slightly firm in the month of August due to seasonal factors like festive demand, lower arrivals and fear of poor quality of wheat stored in govt.'s godowns. However, any spike in cash market is unlikely as govt has ample stock to take care of extra demand in the weeks ahead.

International Market Updates:

CBOT wheat decreased considerably on the strong U.S. dollar, a situation that would adversely affect the export demand for wheat. December wheat delivery lost 1.42 percent and closed at 5.045 dollars per bushel. Analysts opined that the appreciating dollar put pressure on US wheat as it turned out to be more expensive to buyers holding other currencies, coupled with falling Black Sea wheat prices and rising Russian wheat crop estimates.

European wheat futures hit a two-month low on Monday, pressured by a drop in U.S. prices and a glut of supply from big harvests in France and across Europe this summer. The largest estimate for France's wheat harvest at 40.4 million tonnes estimated by FranceAgriMer is weighing on the market a little, though some people are skeptical about the number. Before this France had produced 38.2 million tonne wheat in 1998.

Russian export price for wheat decreased taking clue from declining global market. Depreciating Ruble has helped exporters to receive better profit margin. Notably, wheat export from Russia has been delayed this year due to late harvesting and a new wheat export tax effective from 1st July, 2015. The Ruble has been hit by lower oil prices and Western sanctions over Moscow's role in the Ukraine crisis. Russia's 2015/16 wheat exportable surplus is at 22 million tonnes. Black Sea forward prices for Russian wheat with 12.5 percent protein content were at \$185 per tonne on a free-on-board (FOB) basis at the end of last week, down \$3 from a week earlier.

Russia has harvested 55.5 million tonnes of wheat from 40 percent of the planted area with an average yield of 2.97 tonnes per hectare. Domestic prices for third-class wheat were up 75 rubles compared with a week earlier at 9,425 rubles (\$144) per tonne in the European part of Russia on an ex-works basis.

IGC has revised global wheat production estimate down by 1 million tonne to 710 MMT for 2015-16. The main reason for downward revision is attributed to lower production in India (from 91 to 89 MMT now), Australia (from 27 to 25.5 MMT) and EU (from 150 to 148.5 MMT). However, it has revised Ukraine wheat production estimate up from 21 to 22 MMT. Global wheat trade has been estimated at 1 million tonne higher to 150 million tonne.

IGC has revised global wheat carry stock up by 5 million tonne from 196 to 201 MMT for 2015-16. Global consumption too has been revised 1 million tonne down to 712 million tonne. Overall supply condition remains comfortable this year.

The wheat export tax is set at 50 percent of the customs price per tonne minus 5,500 rubles (\$97), but not less than 50 rubles per tonne. Black Sea prices for Russian wheat with 12.5 percent protein content were at \$199.5 per tonne on a free-on-board (FOB) basis at the end of last week.

CBOT May-15 Future Charts:

International FOB prices Weekly price Movement (USD/T):

International Weather update: (Source-USDA)

Australia- In the wake of last week's soaking rains, scattered showers (5- 15 mm, locally more) fell across Western Australia, further improving crop conditions following more than 2 months of relatively dry weather. Although the recent rainfall has been beneficial for winter grains and oilseeds, the rain must continue to maintain yield prospects as crops approach the critical reproductive phases of development. Farther east, widely scattered showers (2-10 mm, locally more) fell across South Australia, northern Victoria, and southern New South Wales. Although most farms did not receive significant amounts of rain, soil moisture was generally adequate to spur development of vegetative wheat, barley, and canola. Elsewhere in the wheat belt, the second consecutive week of dry weather in northern New South Wales and southern Queensland increased net evaporative losses, but topsoil moisture remained adequate for jointing winter wheat and other winter crops.

Argentina- Locally heavy rain further improved moisture reserves for winter grains in Buenos Aires, but drier conditions prevailed in western production areas. For a second week, rainfall totaled more than 50 mm in northern and eastern sections of the State, with more moderate amounts (10-50 mm) recorded in key southern production areas (the delegations of Tandil and Tres Arroyos). However, amounts declined to below 5 mm to the west, where topsoil moisture was limited for establishment of wheat and barley; above-normal temperatures (1-4°C above normal, with freezes confined to traditionally cooler southern farming areas) exacerbated the impacts of the dryness on field moisture. Similar conditions were recorded across the north, with showers (greater than 10 mm) in eastern production areas and weekly temperatures averaging well above normal (4-8°C above normal, with daytime highs exceeding 30°C).

Russia and Ukraine- Cool, unsettled weather in spring wheat areas sustained good to excellent crop prospects, while heat returned to southern cotton areas. A departing storm system and its consequent cold front produced additional widespread showers (2-20 mm) from Russia's Urals District into the Siberia District and southward into northern Kazakhstan. The moisture coupled with temperatures up

to 3°C below normal maintained good to excellent growing conditions for flowering to filling spring wheat. Farther south, the resumption of above-normal temperatures accelerated cotton toward maturity 1 to 2 weeks faster than normal. Cotton development was accelerated by an excessively hot July, with some yield losses likely due to untimely extreme heat.

International Weekly Outlook:

IGC has revised production and consumption estimate down by one million tonne. Carryout stock has been revised up by 5 million tonne and its hints towards comfortable world supply side this year too. Overall, global wheat market is likely to trade steady to slightly weak due to higher supply in Russia and resolving of export tax issue there. Besides, higher production in France (40.4 MMT) and strong US dollar limiting export opportunity from US would continue to weigh on global wheat market fundamental. Supply side would be easy in the months ahead.
